### Subsection 3.—Comparison of the Values and Volumes of Imports and Exports

The statistics of the external trade of Canada are analysed in this Subsection to reveal changes in the physical volume of external trade as well as in the dollar value of that trade. Since value figures alone may be somewhat misleading when used to show the physical growth of production and external trade, it is desirable to secure a record of the fluctuations in the volume of the country's trade as distinguished from the value thereof. A description of the method used in ascertaining such fluctuations is given at p. 462 of the 1941 Year Book.

In Table 16 the imports and exports for 1943, 1944 and 1945, are first shown at the values at which the trade was recorded; the same imports and exports are then shown at the value they would have had if the average price or unit value had been the same in each year as it was over the average of the years 1935-39. In other words, the figures on the basis of the average values over the base period enable a comparison to be made of the imports or exports for the given years on the basis of variations in quantity only. Index numbers of declared values, that is, the total declared values of the imports or exports in each year expressed as percentages of 1935-39 are then given. These are followed by the index numbers of average values, which show the prices at which goods were imported or exported in each year expressed as percentages of the prices in 1935-39. Finally, the index numbers of physical volume show the relative quantity of merchandise imported or exported in each year expressed as a percentage of the quantity of the same merchandise in 1935-39.

The declared value of imports showed an increase from \$1,735,077,000 in 1943 to \$1,758,898,000 in 1944, a rise of 1.4 p.c.; a decline of 9.8 p.c. was recorded for 1945. However, if the price level of 1935-39 had prevailed in these years, imports would have amounted to \$1,104,816,000 in 1943 and \$1,172,707,000 in 1944 and \$1,088,560,000 in 1945.

Exports also decreased in 1945, both in value and in volume. On the basis of price levels prevailing during the period 1935-39, exports would have been valued at \$1,991,546,000 in 1943, \$2,169,035,000 in 1944 and \$2,021,121,000 in 1945.

The index numbers of unit values of total imports decreased from 156.7 in 1943 to 149.6 in 1944, to 145.3 in 1945, while the index of unit values of exports showed an increase from 147.5 to 156.8 to 157.4. This would indicate a slightly more favourable position of Canada's barter terms in 1945 than in 1943, as the prices of imported goods decreased to a greater degree than did those of the exports exchanged for them.

## 16.—Comparison of the Values and Volumes of Imports and Exports, by Main Groups, 1943-45

Group	Imports for Consumption			Domestic Exports (Excluding Gold)

### Subsection 4.—Proportions of Trade in Raw and Manufactured Products

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. In the early years of Canada's development, imports were made up chiefly of manufactured products and exports of raw and semi-manufactured products. Since the beginning of the twentieth century this position has been almost reversed; a large percentage of imports into Canada now consists of raw material and semi-manufactured products to be used in Canadian manufacturing industries, while exports consist, to a great degree, of products that have undergone some process of manufacture. With the growth of population and the establishment of industries using mass-production methods, it has become profitable to import raw materials such as rubber, cotton and sugar for processing in Canadian factories; such industries can easily produce more finished products than the domestic market can absorb and, therefore, an export trade in these finished goods has become established.

In trade with countries possessing highly developed manufacturing industries, Canada's imports consist of manufactured products and her exports to those countries are made up largely of raw materials and semi-manufactured products. On the other hand, in trade with countries of South America and Africa, whose industrial development is not so advanced, the reverse is true, imports being predominantly raw materials, while by far the larger part of exports consists of fully manufactured goods.

Analyses of Canada's trade, from the angle of degree of manufacture of imports and exports with leading countries, are of value to the student of economic relationships because they present, in summary, a picture with significant meaning in the complementary relationship of manufacturing and commerce between continents and countries.

The data of Table 17 have been specially tabulated to show at a glance this information for all countries of any importance that trade with Canada. Table 18, on the other hand, gives historical statistics that clearly indicate the fluctuations in imports for home consumption of important raw materials used in Canadian manufacture, irrespective of their source. In a broad way, the data reflect the development of Canadian manufactures, although the dislocations in trade caused by the War must be borne in mind in using the figures for the past six years.

### 17.—Imports and Exports, by Continents and Leading Countries, According to Degree of Manufacture, 1944

<sup>1</sup> Includes hair of the camel, alpaca, goat, etc.

## Subsection 5.—Origin and Purpose Groupings of Imports and Exports

In the origin classification of imports and exports appearing in Table 19, the commodities comprising such trade are grouped according to the economic origin of the raw material of which the commodities are composed and classified by the degree of manufacture. The purpose classification given in Table 20 divides the commodities that enter into external trade according to the purpose for which the commodities are intended.

Since the Bureau of Statistics analyses manufacturing production and wholesale prices in Canada according to origin and purpose, the statistics given here for external trade provide a basis for a study of production, prices and trade according to origin or purpose.

<sup>1</sup> In this classification the expression "Canadian Farm Products" refers, in the case of exports, to commodities actually produced, in their original state, on Canadian farms. In the case of imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both imports and exports, materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

## PART III.—SUMMARY OF EXTERNAL TRANSACTIONS

### Section 1.—Canadian Balance of International Payments\*

Canada's external economic relations are revealed in outline by statements of the Canadian balance of international payments. The statements present, in a statistical form, a summary of the commercial and financial transactions occurring between Canada and other countries. They furnish, therefore, an over-all view of the external relations of the Canadian economy just as national income studies provide an outline of its internal structure. In an economy such as Canada's where external sources of income and demand furnish an important dynamic element to activity within the country, the balance of payments focuses attention upon the impact of external demand upon the Canadian economy, the expenditure of income outside of Canada, and the resulting financial and exchange aspects. During the War, transactions on external account have constituted an even larger proportion of the national income than formerly. In the latter years of the War, gross credits on current account represented almost one-half of the national income compared with approximately one-third in the period before the War.

**General Structure of the Balance of Payments.**—The Canadian balance of payments before the War possessed quite definite outlines and characteristics. For some years net receipts from the excess of merchandise exports over import trade with all countries, newly mined gold, and travel expenditures exceeded the net external disbursements on interest and dividends account and for freight and other services. The growing current account credit balance in all countries in years immediately preceding the War was dependent, however, to a considerable

\* Summarized from the Report "The Canadian Balance of International Payments, 1926-44" prepared by C. D. Blyth, B.A., Chief, International Payments Branch, Dominion Bureau of Statistics.

extent upon expanding gold production. The more significant annual variations in the gross volume of current international transactions and in the current account balances arise usually from fluctuations in merchandise trade. Demand for Canadian exports varies widely from year to year, and Canadian demand for imports is closely related to fluctuations in the national income in Canada. The large element of interest charges in the total payments on account of interest and dividends makes for some rigidity in payments on income account, and possible fluctuations in the net balance from the tourist trade are moderated considerably by the substantial volume of Canadian travel expenditures outside of Canada, which usually fluctuate in the same direction as travel expenditures in Canada.

The geographical distribution of transactions has displayed very pronounced characteristics and has shown a concentration of dealings with the United Kingdom and the United States with credit balances on current account characterizing the balance of payments between Canada and the United Kingdom for a number of years preceding the War, and chronic debit balances being customary in the account with the United States. The main sources of the credit balance with the United Kingdom was the large income which Canada has had from exports of merchandise to the United Kingdom. In the years immediately before the War, this was customarily much greater than the total of current payments made by Canada to the United Kingdom for merchandise imports, shipping and other commercial and financing services and payments of interest and dividends on Canadian investments owned in the United Kingdom. This sterling income was, however, freely convertible before the War into United States dollars or other currencies for which Canadian demand exceeded the Canadian supply. Because of this existence of free exchange markets, there was no problem of settling the credit balance with the United Kingdom such as has developed during the War. The Canadian need for external income to meet payments in the United States and certain other countries where Canada usually has debit balances arises chiefly from the excess of purchases of merchandise in the United States over Canadian exports to that country combined with the large Canadian payments of interest and dividends to United States investors, and the payments for transportation, travel and other services. While there is, in good years, a substantial income from Canadian exports to the United States and from United States tourist expenditures in Canada, this, along with sales of newly mined gold, was not sufficient in any year before the War to meet the large payments for goods and services purchased in the United States.

Canada's special interest in a system of multilateral settlements is apparent from the structure of the Canadian balance of payments. For example, the existence of free exchange markets before the War provided a channel of international settlement, particularly between the nations of the British Commonwealth and the United States. It was, therefore, possible for there to be a considerable amount of disequilibrium or "unbalance" in Canada's current accounts with the United Kingdom and the United States without any special problems of settling these balances arising. Triangular settlements such as those arising from the unbalanced state of Canada's accounts with the United Kingdom and the United States were an integral part of the network of international commerce which had grown up over a long period. The system of multilateral settlements made it possible to settle balances like those arising from Canada's dealings with its principal trading partners.

**Wartime Developments.**—The War, however, interrupted the operation of the system of multilateral settlements by creating conditions under which sterling was no longer freely convertible into United States dollars. In addition, the current accounts of the belligerent nations became distorted by wartime demands which have produced greatly augmented current balances for which new methods of settlement have had to be devised. In the case of Canada, the new conditions produced problems with respect to the balances of payments with both the Sterling Area and the non-sterling area, and the situation made exchange control necessary.

During the wartime period, the external demand for Canadian production has been a dominant influence upon the balance of payments. British and other Allied requirements for munitions, food, raw materials and other goods and also for war services have been among the principal contributors to the great wartime development of productive capacity and of capital equipment in Canada. The rapid expansion of investment in new productive facilities created heavy demands for capital goods procurable only in the United States. The new kinds of industrial production also led to new demands for fuel, industrial materials and components which also had to be purchased in the United States. As a result of the new capacity and demands, the level of industrial production on overseas account rose to unprecedented heights.

In their external aspects, the financial problems accompanying this great achievement in production were twofold. There was the problem associated with the British scarcity of Canadian dollars to pay for the munitions, food and other commodities so urgently needed for the prosecution of the War and there was that arising from the Canadian shortage of United States dollars to pay for the capital equipment, materials and components required for the war production. These two tendencies contributed to the development of a greatly increased credit balance in the current account with the Sterling Area and an increased debit balance in the current account with the United States Dollar Area. Accompanying this great increase in disequilibrium was the interruption in the system of multilateral settlements already referred to. As a result of these developments, it was necessary to devise methods of overcoming these financial obstacles in order that they should not interfere with the Dominion's contribution to the War.

With the Sterling Area, the problem was one of finding means of financing the growing British shortage of Canadian dollars resulting from the extraordinary wartime needs of the United Kingdom for Canadian munitions, food and raw materials. In the earlier years of the War, this shortage was principally met by the Canadian Government repatriating Canadian securities owned in the United Kingdom and by the accumulation of sterling balances by the Foreign Exchange Control Board. Some settlements were also effected by purchases of gold from the United Kingdom which, in turn, were sold in the United States to settle Canadian deficits there. In 1942, however, a new method of meeting the growing needs of the United Kingdom for Canadian dollars was introduced when a contribution of \$1,000,000,000 was made to the Government of the United Kingdom for expenditure on war supplies in Canada. In the same year the major part of the accumulation of sterling balances by Canada was converted into a loan of \$700,000,000 to the United Kingdom. A further development was the appropriation by the Canadian Government in 1943 of \$1,000,000,000 for Mutual Aid, for the production and transfer of Canadian war supplies to the United Nations and in 1944 of \$800,000,000. Capital debits arising from the repurchase by Canada of the British equity in the fixed capital

of war plants, amounting to \$205,000,000 and the repayment of \$190,000,000 by Canada of British working capital advances made to Canadian munitions producers earlier in the War, provided a considerable amount of the additional funds required to finance the British current account deficiency in 1943. There were also special receipts of United States dollars from the United Kingdom, and increasing current payments by the Canadian Government to meet the overseas expenditures of the Canadian Forces provided a very substantial source of Canadian dollars for the United Kingdom. In short, the United Kingdom was able to obtain such a large volume of commodities from Canada for the prosecution of the War only because of special receipts of Canadian dollars such as have been outlined above. The special sources of dollars which made this possible were mostly outlays of the Dominion Government arising from the wartime financial organization of the Dominion in which government expenditures represent a large part of the national income.

In the case of the balance of payments with non-Empire countries, the central problem has also been one of scarcity—in this case a Canadian shortage of United States dollars. The customary deficits in Canada's current account with the United States were greatly augmented by the War, principally because of the rapid rise in Canadian imports from the United States. At the same time, net credits from other foreign countries whose currencies are convertible into United States dollars have sharply contracted with the decline in exports to Continental Europe and Asia.

Since, during the war period, the deficits incurred with the United States dollar area had to be settled with United States dollars, it became necessary to conserve United States dollars for the more essential purposes of the War, and to develop new sources of United States dollars. Exchange control with the control of capital movements provided the principal means of conserving United States dollars. Government measures also limited expenditures on Canadian pleasure travel and non-essential commodities in non-Empire countries. As a result of the agreements entered into at Hyde Park in April, 1941, new sources of United States dollars were produced with the sale of ships and munitions on a large scale to the United States Government and further development of the production of raw materials in Canada. Settlements made by the United Kingdom in United States dollars, and in gold sold in the United States, were also a factor in meeting deficits in the United States. Another factor has been the growing volume of imports of capital arising, mainly, from the purchase of outstanding Canadian bonds by United States investors.

In the last two years of the War, a combination of temporary developments led to a marked change in the current account with the United States. Although current payments by Canada for merchandise and services reached a record level in 1943 and declined only moderately in 1944, there were very striking increases in current receipts from sales of munitions to the United States Government and from sales of grain to the United States which reached their peak in 1944, when they considerably exceeded the level of total exports of all commodities from Canada to the United States in 1938. Other exports to the United States were also heavier and more diversified than formerly, as unusual demands were created by wartime incomes and temporary shortages. Another unusual source of substantial income in the latter years of the War originated in United States Government expenditures on defence activities in Canada, such as the construction of the Alaska highway and airfields, and the Canol project and other activities in northern Canada.

As a result of these various non-recurrent developments, the current account deficit with the United States was reduced to negligible size in 1943. In 1944, however, the unusual sources of receipts were so heavy there was a substantial surplus from current transactions in the United States before taking account of the large special payments to the United States Treasury in that year. When these payments are included in the current account, however, it is brought close to equilibrium for the year as a whole, there being a relatively small credit balance. These special payments were in connection with the termination of the financial aspects of the Hyde Park agreements and included various war expenditures such as reimbursements to the United States for airfields and telephone lines constructed in Canada.

**Developments in 1944.**—Canadian war production was at its peak in 1944 and this is reflected in the balance of payments in various ways. In the balance of payments between Canada and the Sterling Area the effects of maximum production were to increase gross expenditures of the Sterling Area in Canada, including the expenditure of Mutual Aid funds on Sterling Area account as well as the disbursement of the greatly augmented amount of funds actually received by the Sterling Area from payments by the Canadian Government of overseas war expenditures.

Food and munitions shipped to the British were at record levels. Exports of lumber and other wood products were also heavier than in the previous year but there was some recession in shipments of non-ferrous metals and miscellaneous commodities to the United Kingdom, arising mainly from reduced requirements for aluminum. One of the greatest relative increases in the expenditures of the Sterling Area in Canada was in the value of exports on other Sterling Area account. This was partly a result of the development of Mutual Aid to Australia with the consequent direct financing of some commodities to that country which formerly had been financed through United Kingdom channels. But exports of civilian commodities to the other Sterling Area countries were much heavier in 1944 as well, with the result that the requirements of the other Sterling Area countries added a considerable amount to the direct requirements of the United Kingdom itself.

Sterling Area expenditures for war services were about the same in 1944 as in 1943. Payments to Canada for freight were higher, reflecting the increased movement of commodities from Canada and the increased earnings by the growing fleet of Canadian-operated merchant vessels. Total current expenditures of the Sterling Area in Canada increased from \$2,066,000,000 in 1943 to \$2,307,000,000 in 1944. This was between four and five times the size of Empire purchases of Canadian commodities and services in 1939.

The more normal sources of Canadian dollars which the Sterling Area has to meet these liabilities did not vary much in total in 1944. The value of imports from the Sterling Area into Canada showed little change and Canadian payments to the United Kingdom for freight, interest and dividends and other normal current services were only slightly higher in 1944. The most important change in the Sterling Area's supply of Canadian dollars, of course, came through the great increase in the payments by the Canadian Government to the United Kingdom for the expenses of the Canadian Forces overseas. These increased from \$499,000,000 in 1943 to \$1,085,000,000 in 1944.

As a result of these transactions, the Sterling Area had net current account deficits of \$879,000,000 in 1944 compared with \$1,216,000,000 in 1943. Mutual Aid provided a means of financing \$834,000,000 of the deficit in 1944. Such aid

to the United Kingdom accounting for about \$775,000,000 of the total. Most of the remainder was for Australia with smaller amounts for the British West Indies, India and New Zealand. These goods provided under Mutual Aid have been included with other exports in the balance of payments statements and consequently are reflected in the current account balances shown. Their inclusion among the credits is offset by debits of similar size which have been entered in the special "Mutual Aid" item. Another method of financing the deficit was the special receipt of United States dollars from the United Kingdom, equivalent to \$55,000,000 Canadian. There were also debits on balance on capital account and other special official payments which were mainly for the purpose of adjusting inter-governmental transactions, and various currency settlements adjusting special transactions.

In the balance of payments with the United States, a combination of unusual developments created the unique conditions in which there was a credit balance on current account in 1944. Various abnormal wartime sources of dollars provided a surplus over and above Canada's current expenditures in the United States during the year. Receipts from the sale of munitions to the United States Government under the Hyde Park Agreements, and from the sale in the United States of over \$300,000,000 of grain to meet wartime feed and other shortages, heavy exports of a great variety of other commodities for which scarcities and wartime incomes created swollen demands, and continued expenditures by the United States Government on defence activities in northern Canada all contributed to the extraordinary volume of current receipts. There was some improvement in United States tourist and travel expenditures in Canada accompanying the easing of American restrictions on pleasure travel by car but at the same time there was a further contraction in the net exports of non-monetary gold resulting from continued reductions in production. The consequent increase in total current receipts was considerably greater than the level of current expenditures in the United States. The principal reason for the moderate contraction in the level of imports was the greater use of Canadian sources of supply of materials and the virtual completion of the program of capital expansion in Canadian industry which entailed such large purchases of Canadian equipment in the United States in the early years. There was an appreciable increase in tourist and travel expenditures in the United States by Canadians accompanying some relaxation in travel restrictions in the month of May, 1944. Although payments of interest were slightly higher because of the increased United States holdings of Canadian bonds, there was a decline in dividend payments.

Inflows of capital continued to be extraordinarily heavy in 1944 with transactions in securities still representing the major part of the movements. Gross sales of Canadian securities to the United States were less than in 1943 but so also was the total of redemptions. While sales of Canadian bond issues payable in foreign currency were less in 1944 than in 1943, there was an increase in purchases of Canadian domestic bonds, and more capital was transferred to Canada for direct investment by United States businesses than was the case in the earlier years of the War. Capital payments continued to be for the most part for the redemption of securities or other debts.

There were special receipts of United States dollars from the United Kingdom amounting to \$55,000,000 providing a means of settling part of the British deficit in Canada. There was also a substantial total of receipts from exchange recoveries and adjustments arising principally out of transactions with the Sterling Area.

A substantial part of the credit balance on current account with non-Empire countries in 1944 is represented by war supplies and services provided as Mutual

Aid by the Canadian Government to China, France and the U.S.S.R. The total of Mutual Aid to this group of countries amounted to \$102,000,000. The gift of wheat to Greece by the Canadian Government is also part of the credit balance being offset by a debit entry in the capital account.

Statistics of the balance of international payments have been revised back to 1926. Details are given for the years 1939 to 1944 in Tables 3 to 5 and while, for the previous years, it is possible to give here only the summary figures in Tables 1 and 2, details for those years may be secured from the report "The Balance of International Payments, 1926-1944", published by the International Payments Branch, Dominion Bureau of Statistics. A subdivision of tourist expenditures is shown in Table 6, p. 569.

<sup>1</sup> Excludes travel between Canada and Newfoundland.

<sup>2</sup> Less than \$500,000.

## Section 2.—The Tourist Trade of Canada\*

The growth of tourist travel in Canada, to the point where it has become one of the nation's great 'service' industries, was a remarkable development in pre-war years. It represents in economic terms the disposition of national assets in which Canada is particularly rich—scenic beauty, invigorating climate, opportunities for summer and winter sports of all kinds, religious shrines and places of historical interest—and for the exploitation of which large capital expenditures have been made on hotel accommodation, improved highways, national parks and other attractions.

The place of the tourist trade as one of the 'invisible' items in Canada's balance of international payments is seen from the tables at pp. 567-569. The expenditures in Canada of travellers from other countries have the same effect, in so far as they influence the balance of payments, as the export of additional commodities and, similarly, the expenditures of Canadian travellers in other countries are comparable to the import of goods from abroad.

**United States Travel Expenditures in Canada.**—The important place that United States travel expenditures occupied in the Canadian economy in normal times was more fully appreciated during the War, as a result of unprecedented demands for United States dollars to pay for much-needed war materials. Sterling income from exports to the Sterling Area could no longer be converted into United States dollars to pay for purchases in the United States, and thus direct sources of United States exchange, such as the tourist trade, were of considerable importance in the furtherance of Canada's war effort.

As a large part of the traffic from the United States customarily travels to Canada by motor-car, the curtailment in the use of automobiles in the war years had the effect of reducing the volume of international expenditures. The effects of the decline in motor traffic first became pronounced in 1942 when the expenditures of United States motorists in Canada were \$26,000,000, compared with \$54,000,000 in 1941. Total United States expenditures in Canada in 1942 are estimated at \$79,000,000, compared with \$107,000,000 in 1941. In 1943 there were further contractions in the expenditures of motorists but these were more than offset by much heavier expenditures by persons travelling by rail than in former years and, as a result, United States expenditures in Canada in 1943 totalled \$87,000,000. In 1944 there were gains shown in each class of traffic and total expenditures in Canada are estimated at \$116,600,000. Subsequent to the ending of hostilities, a sharp upsurge was experienced in tourist traffic and preliminary estimates for 1945 indicate United States expenditures of \$164,000,000, compared with pre-war levels of \$149,000,000 in 1937, \$134,000,000 in 1938 and \$137,000,000 in 1939. Thus, 1945 recorded the highest expenditures since 1930 and is indicative of post-war prospects. Tourist entries from the United States in the first quarter of 1946 confirm the upward trend.

**Canadian Travel Expenditures in the United States.**—The most significant factors influencing Canadian travel in the United States during the War were the restrictive measures introduced by the Dominion Government in order to con-

\* Revised under the direction of C. D. Blyth, M.B.E., B.A., Dominion Bureau of Statistics.

serve United States dollar exchange. Together with the efforts to increase the number of United States visitors to Canada, these measures were designed to increase the net favourable balance accruing to Canada as a result of the tourist trade and thus to release United States dollars for vital war needs.

In July, 1940, by action of the Government under the Foreign Exchange Control order, virtually all Canadian pleasure travel involving the expenditure of United States dollars was eliminated, and total travel declined to a low level for several years. During this period of the War the Government was faced with the problem of deciding on the relative importance of the uses to which Canada's limited supply of United States dollars might be put, and it was considered essential that the purchase of war material, the servicing of the national debt, and the meeting of contractual obligations in the currency of the contract should have first call on such United States dollar resources. Later in the War, however, the United States dollar situation improved as a result of sales of munitions to the United States Government and other unusual receipts of United States dollars. Consequently, it became possible to lessen the restrictions on travel. After May, 1944, when the restrictions were modified, Canadian travel to the United States increased considerably and, with additional modifications which followed in May, 1945, further advances were recorded, funds being available from then on to cover any reasonable travel expenditures.

In 1941 the first full year in which the travel restrictions were in force, total expenditures of Canadian travellers in the United States are estimated to have been \$18,250,000 as compared with nearly \$40,000,000 in 1940. Mainly as a result of the change in travel restrictions in the spring of the year, Canadian expenditures in the United States increased to \$57,100,000 in 1944. These expenditures compare with the pre-war level of Canadian expenditures in the United States of \$65,000,000 in 1937, \$66,000,000 in 1938 and \$67,000,000 in 1939. Preliminary estimates for 1945 place Canadian tourist expenditures in the United States at \$83,000,000, which surpasses the record of \$81,000,000 in 1929, when, however, prices and travel costs were at somewhat lower levels in the United States. Further, the normal volume of overseas tourist travel by Canadians, expenditures on which averaged some \$20,000,000 annually in the inter-war period, has, of necessity, been confined to the Americas.

**Travel between Canada and Overseas Countries.**—It is estimated that travellers from overseas countries spent approximately \$3,000,000 in Canada in 1945, while Canadian expenditures overseas were \$2,000,000 in the same year. As pleasure travel between Canada and overseas countries had been largely eliminated by wartime conditions, it may be presumed that the great bulk of these amounts represented expenditures by persons travelling on Government or other business.

The diverse resources of the various parts of the country have led to a vast exchange of products and the task of providing goods and services where they are required for consumption or use by a population of 12,119,000 (1945 estimate) accounts for a greater expenditure of economic effort than that required for the prosecution of Canada's great volume of external trade, high though the Dominion ranks among the countries of the world in this field.

Internal trade is broad and complicated: it encompasses all value added to commodities traded in provincially and interprovincially by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services including those directed to the amusement of the people, such as theatres, sports, etc. In fact, in a broad interpretation, internal trade covers a large part of those activities of the people that add to the 'form' utilities, dealt with in the various preceding chapters, the utilities of 'place', 'time' and 'possession', and the personal and professional services referred to in the Survey of Production and other chapters. However, the arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles and cross reference to other chapters is essential. The Index will be found useful in this respect.

## PART I.—GOVERNMENT AIDS TO AND CONTROL OF INTERNAL TRADE

### Section 1.—Wartime Controls Affecting Distribution and Trade, 1945-46\*

The end of the War in 1945 did not mean the immediate disappearance of the need for all controls over the supply and distribution of goods and services. The tapering off of military requirements after V-E Day in May and the gradual improvement of civilian supplies permitted the relaxation of controls in some fields such as durable goods and various raw materials. On the other hand, the cessation of hostilities brought new demands on supplies of some goods, notably food, as the liberation of occupied countries brought large and urgent relief demands. Textile supplies deteriorated while demand increased and, to ensure the most effective use of limited supplies, the program of directed production was expanded in 1945. The re-establishment of ex-servicemen presented special problems particularly in the months following V-J Day in August, when the rate of demobilization was accelerated. Distribution controls were revised to reduce the difficulties confronting veterans who were interested in establishing businesses.

**Equitable Distribution Policy.**—One of the major changes made in 1945 was the revision of the Wartime Prices and Trade Board's "Policy of Equitable Distribution" governing goods in short supply. Under this policy, introduced in October, 1942, manufacturers and wholesalers had been required to distribute goods in short supply in proportion to their 1941 sales to each customer. The policy had been effective in maintaining a fair distribution of scarce goods among established concerns. In 1945, however, it became apparent that some modification of the policy was required to facilitate the establishment of new businesses, a matter of particular concern to ex-service men, and to meet the problem arising out of the resumption of the manufacture of durable goods for which many of the 1941 distribution outlets had closed. In September, therefore, a revised policy was announced under which suppliers of some goods were exempted from the provisions of the equitable distribution policy and, in the case of certain other goods, they were permitted to distribute 20 p.c. of current production without restrictions while 80 p.c. remained subject to the rules of equitable distribution. The list of goods affected in these two categories was extended later in the year and again at the beginning of 1946. The spheres in which the equitable distribution policy no longer applied included capital equipment, electrical appliances, automobiles and radios, numerous pulp and paper products, tea and coffee, as well as goods exempted from maximum prices or on which the price ceiling had been suspended (see p. 855). Goods for which 20 p.c. free distribution applied included clothing, footwear and foods (except for rationed items, ice cream, lard, shortening, edible oils and starch where no relaxations could be made).

**Foods.**—With the end of the War, the urgent relief requirements of the European continent and the Far East imposed new demands on world food supplies. Enemy occupation and the War had disrupted food production and distribution in these areas, and shortages were intensified by droughts and bad harvests in 1945. Food production in other parts of the world could not be expanded beyond its wartime peak and was also adversely affected by local droughts in 1944 and 1945.

\* Prepared by the Research Division, Wartime Prices and Trade Board. This article deals with developments in the year 1945 and the first four months of 1946. The development of distribution controls up to 1945 and the principles and administration of rationing are described in the Canada Year Books 1943-44 (pp. 521-526) and 1945 (pp. 567-571).

In this situation Canada, as a major exporter of foods, found it necessary to continue and in some cases to tighten the control of domestic consumption in order to make a maximum export surplus available and to make the best use of restricted imports of such important foods as sugar.

*Meat.*—Rationing of meat, first introduced in 1943, had been lifted in the spring of 1944. In July, 1945, however, it was announced that meat rationing would be re-imposed since it had become apparent that domestic consumption would have to be reduced if export commitments were to be met in the face of the downward trend of hog slaughterings. Control over commercial slaughtering was immediately re-established as part of the machinery of meat rationing and slaughter quotas were set, though in September it was feasible to suspend the quotas on cattle in view of the very heavy marketings.

Meatless Tuesdays and Fridays for restaurants became effective in July and consumer rationing in September. The weekly ration varies from one to three pounds depending upon the type of meat purchased. A change in the ration was made on September 22, when "fancy meats", such as liver and hearts, were removed from the ration in view of the risk of spoilage because of slow sales of these products. Some further adjustments were made in October.

In January, figures were released showing that the annual rate of domestic consumption had been reduced to 136 lb. per person in the last three months of 1945 as compared with 149 lb. for 1944. This was a reduction of about  $8\frac{1}{2}$  p.c. as compared with the 12 p.c. cut which had been estimated before the above changes in the ration had been made.

*Butter.*—The butter situation did not ease in 1945. Consumption of fluid milk increased further, at an accelerated pace, and large quantities of milk continued to be required to maintain shipments of cheese to the United Kingdom and evaporated milk to Europe.

The weekly butter ration stood at about 7 oz. per person in March, 1945. At the beginning of 1946, the ration was reduced to 6 oz. and during March and April to 4 oz. per week. At the end of January, quota users, such as restaurants and hotels, were informed that their quotas for the first quarter of 1946 would have to cover the period until the end of April.

*Sugar.*—The pooling of world sugar supplies was continued in 1945 as the need for conservation remained as acute as ever. In the spring, arrangements were made to reduce the gap between United Nations requirements and available supplies and to equalize the annual per capita consumption of the United Kingdom, the United States and Canada at a rate of 70·8 lb. Further ration reductions, therefore, followed the cuts made in the first quarter of the year, when the consumer ration had been reduced slightly from 2 lb. every four weeks to 2 lb. each calendar month. In each of the five months June, July, August, October and December the ration was cut to 1 lb. The 2 lb. allowance was maintained in September to permit a maximum amount of home canning and also in November to allow for Christmas baking. The extra sugar ration for home canning remained unchanged at 10 lb. per person.

Quotas for industrial users were cut in January and again in July so that in the second half of 1945 they stood at the following proportions of 1941 usage: bakers 60 p.c.; biscuit and cereal manufacturers 55 p.c.; others, such as soft drink, confectionery and candy manufacturers, 50 p.c. Allotments to jam and wine manufacturers were also reduced and cuts put into effect for Armed Forces establishments.

In the second quarter of 1946, quotas for industrial users were raised by 10 p.c. of 1941 usage. Quota users such as hotels and restaurants also took a substantial cut during 1945.

*Preserves.*—No change was made in the level of the preserves ration. Sugar and preserve rationing were combined under one scheme effective the first of January, 1946. Under this system, either sugar or preserves may be acquired with the same coupon, whereas previously sugar coupons could not be used for preserves. The consumer ration of sugar and preserves remained at approximately the level of the last seven months of 1945.

*Textiles.*—There was little improvement in the textile situation in 1945. A high volume of domestic demand, augmented by the requirements of demobilized service personnel, more than offset the reduction in military requirements. Imports of cotton and worsted fabrics in 1945 were seriously restricted and, though efforts were made to increase domestic production of yarns and fabrics, total textile supplies were smaller in 1945 than in 1944. It was essential, therefore, that materials and productive capacity be directed toward the most essential types of output and this was done by the Wartime Prices and Trade Board through the system of "production directives".

*Directed Production.*—During 1943 and 1944 the Prices Board had set requirements for the output of certain essential garments, allocated the required output among the manufacturers, and assisted these manufacturers in obtaining the necessary materials and labour. In 1945 this system was extended to almost all essential garments. Since such a comprehensive program absorbed the bulk of a number of fabrics, control had to be extended to the production and distribution of fabrics. Garment manufacturers were required to produce the same proportionate output in each price range as in 1942 and steps were taken to get fabrics in the required price ranges produced and distributed.

The directive program found its most complete application in the field of woollen goods. Early in 1945, a directive was issued to weavers requiring production of specified quotas of all woollen and worsted fabrics. Production of essential children's clothing and men's work clothing was already under directive and a similar program was put into effect for men's suits, coats and trousers, women's suits, dresses, etc. Deliveries of woollen and worsted fabrics were controlled by a system of fabric purchase authorizations in accordance with this directive program.

In the case of cotton goods, control over the production and flow of fabrics was less formal. Production quotas were established for such garments as men's and boys' shirts, pyjamas, shorts, women's dresses and blouses, children's wear, and work clothing. The output of men's shirts and work clothing lagged behind planned levels, partly owing to the reduced imports of cotton fabrics from the United States. In March, 1946, special measures designed to step up shirt production were announced. Manufacturers were prohibited from using any shirting material for articles other than men's and boys' shirts until their production was up to the level directed by the Board. Shirt inventories were restricted to one month's production. It was also stated that a larger portion of the cotton fabric imports from the United States would be allocated to shirt manufacturers.

A shift to the production of more profitable higher-priced goods, apparent in various lines, was particularly marked in the case of rayon fabrics and the output of low-priced garments fell short of directed levels. In the latter part of 1945

special steps were taken to correct the situation and the rayon mills were given production schedules which directed them to produce specified quantities in the various price ranges. Such schedules are being continued in 1946.

Most of the important directives, such as those covering work clothing, men's suits, children's woollen clothing and women's low-priced dresses, were continued into 1946, though the direction of fabric supplies was less formal than previously.

*Priority Suit Purchase Certificates for Service Men.*—In view of the shortage of suits, special arrangements were made to ensure priority of purchase to demobilized service personnel. Under the plan, personnel discharged after May 1, 1945, received certificates entitling them to priority in the purchase of one suit. Retailers and merchant tailors secured replacement of suits sold against certificates on forwarding them to their suppliers. The latter in turn forwarded the certificates to the Textile Co-ordination and received drafts for the purchase of fabrics in addition to their quota. In July, it was stipulated that retailers would receive only 65 p.c. of their normal quota in the usual way and must surrender certificates for the remaining 35 p.c.

*Raw Materials and Durable Goods.*—In the course of 1945, most of the restrictions on distribution of durable goods were removed. In the later months of the year, a number of the Controls operating in the Department of Munitions and Supply were dissolved and regulations covering aircraft, metals, chemicals, oil and other materials were withdrawn. The following Controls remain: Motor Vehicles, Power, Steel, Coal, Rubber, Timber, Radio Active Substances, and Priorities. Jurisdiction over metals (except for steel) was transferred to the Wartime Prices and Trade Board and restrictions on the use and distribution of tin, tin-bearing alloys, cast iron and steel scrap were continued in force.

Operations of the Priorities Officer of the Department of Munitions and Supply, which had been closely tied in with the priorities system in the United States, were reduced greatly with the end of the War and the consequent removal of a large proportion of the United States priority controls. In January, 1946, however, as a result of the United States steel strike, priority controls over steel were re-established and in March, 1946, certain priorities in the distribution of construction materials were introduced.

During 1945 it was possible to discontinue permit rationing of certain types of durable goods which had been under the jurisdiction of the Wartime Prices and Trade Board. Such controls were lifted in regard to farm machinery, construction equipment and small-arms ammunition.

*Motoring.*—*Motor-Vehicles.*—The production of automobiles was halted in 1942 and stocks on hand were set aside as a Government pool. From this reserve, the needs of certain essential users such as physicians were met by the issue of permits from the Motor Vehicles Control in the Department of Munitions and Supply. In June, 1945, all restrictions on the manufacture of motor-vehicles were lifted but a priority system of distribution was introduced. Applications for a purchase permit for an automobile are made to the Regional Motor Vehicle Rationing Officer. Top priority was given to the needs of physicians, nurses, police, fire-fighters and other essential users. Incapacitated veterans who needed a car for their rehabilitation and veterans who required a car for business purposes also received priority assistance. Dealers were at first not permitted to sell to persons not holding priority certificates

but this restriction was removed in March, 1946, subject to the requirement that the dealers must meet all priority demands before selling to persons without priority certificates.

The few civilian trucks manufactured during the period March, 1942, to August, 1945, when restrictions on production were lifted, were also strictly rationed under permit from the Motor Vehicles Control. In September, 1945, a priority system was announced to cover sales of new trucks. Two priority groups were established, and dealers are required to give preference in filling orders to those placed by holders of priority certificates.

*Tires and Tubes.*—Tire rationing was introduced in May, 1942. In June, 1945, it was possible to terminate the rationing of tubes, and at the same time the list of persons eligible for new or used tires was extended. Further relaxations were made at the beginning of December and the larger size of truck tires, some farm machinery tires and all used tires were removed from the ration. At the end of the year, rationing of tires was completely removed.

*Gasoline.*—A coupon-rationing plan for gasoline was introduced, effective Apr. 1, 1942, and each motor-vehicle owner was required to register the vehicle with the Oil Controller and to obtain a gasoline allowance and ration book. Motor-cycles, commercial vehicles and water-craft were also provided with gasoline under various categories. In 1945, the value of a ration coupon was increased after V-E Day and the whole rationing system terminated following V-J Day.

## Section 2.—Combinations in Restraint of Trade\*

Dominion legislative measures for aiding and regulating trade include specific prohibitions of operation against the public interest by monopolies and similar commercial combinations. Monopolistic trade arrangements tending to eliminate competition in price, supply or quality of goods, and thereby to increase unduly costs or prices, are illegal under laws including the Combines Investigation Act and Section 498 of the Criminal Code. These laws are designed to assist in achieving the widest desired use of the nation's economic resources by promoting reasonable competitive opportunities for the expansion of production, distribution and employment.

The first Dominion legislation making statutory provision against unlawful restraint of trade was the Act for the Prevention and Suppression of Combinations Formed in Restraint of Trade, passed in 1889 and now effective in amended form as Section 498 of the Criminal Code. Legislation providing special facilities for the investigation of trusts or combines was first enacted in 1897 and was included in the Customs Tariff. In 1910 a separate Combines Investigation Act was provided, administered under the Minister of Labour. Succeeding Combines Investigation Acts were enacted in 1919 and 1923. Summaries of public proceedings respecting combinations in restraint of trade, including principal investigations and prosecutions, have appeared since 1900 in the *Labour Gazette* published monthly by the Department of Labour.

**The Combines Investigation Act.**—The Combines Investigation Act (R.S.C. 1927, c. 26, as amended in 1935 and 1937) provides for investigation of trade combinations, mergers, trusts and monopolies alleged to have been formed or operated in restraint of trade and to the detriment of the public. Organizations

\* Revised by F. A. McGregor, C.B.E., Commissioner, Combines Investigation Act, Department of Justice.

or commercial arrangements of this class which operate to the detriment of the public by enhancing prices, fixing common prices, restricting competition, limiting production or otherwise restraining or attempting to restrain trade, are defined in the Act as combines. Business combinations and associations for most other purposes are not contrary to public policy, including associations to assemble and supply information on trade operations or to effect useful standardization or simplification of products or services. Participation in the formation or in the operation of a combine is an indictable offence, subject to penalties up to \$25,000 or two years' imprisonment. Prosecutions for alleged offences may be undertaken at the instance of the Attorney General of a province or the Attorney General of Canada. Investigations of alleged combines under the Act are conducted under the direction of a Combines Investigation Commissioner. The Act provides for publication of reports of such investigations and for prosecution when a combine is found to exist. The administration of the Combines Investigation Act was transferred from the Minister of Labour to the Minister of Justice, effective from Oct. 1, 1945, by Order in Council under the Public Service Rearrangement and Transfer of Duties Act.

Principal court proceedings following investigations under the Combines Investigation Act completed during the war years between 1939 and 1945, included prosecutions of alleged combines of manufacturers and wholesalers of tobacco products, and manufacturers of corrugated and solid fibreboard shipping containers and materials for the manufacture of such containers. Thirty-six companies and individuals engaged in the tobacco business, including wholesalers and seven manufacturers, were convicted by a jury at Edmonton in 1941 for offences of participation in a combination to fix and enhance prices of tobacco products and in operations of a merger, trust or monopoly allegedly controlling tobacco distribution throughout Canada to the detriment of the public. Fines imposed by the Alberta Supreme Court totalled \$221,500 and ranged in individual amounts from \$250 to \$25,000. Appeals against conviction by 35 of these accused were allowed by four members of the Alberta Court of Appeals in 1942 on the ground that certain of the accused previously had been charged under Section 498 of the Criminal Code and on other grounds of procedure at the trial. In the shipping container cases, 21 companies and one individual were sentenced at Toronto to pay fines amounting in all to \$176,000. All 22 accused were found guilty of offences relating to undue lessening or prevention of competition in the manufacture and sale of corrugated and solid fibreboard boxes or shipping containers, or of liner board and other materials used in the manufacture of shipping containers. Appeals against a number of these convictions were dismissed by the Supreme Court of Canada in 1942. A decision of the Privy Council, holding that these fines should be transmitted to the Minister of Finance for the public uses of Canada and not to the Corporation of the City of Toronto, was delivered in October, 1945.

An inquiry into the nature and effects of international cartels and other similar types of private monopolistic controls affecting Canadian trade was completed in 1945. The inquiry constituted a survey of the principal kinds of international industrial combinations which had restrictive or monopolistic effects upon the production and distribution of commodities entering into Canada's foreign and domestic trade in the pre-war period. It included an examination of needs for the prevention or public control of types of commercial combinations that were capable of unduly restricting Canadian trade. Recommendations in the published report of the inquiry, made by the Commissioner of the Combines Investigation Act to the

Minister of Justice in October, 1945, included a strengthening of the Combines Investigation Act in certain matters of procedure; provision of more adequate facilities for investigations under the Act, to include investigations of certain presently defined classes of unfair trade practices and of excessive restrictions based on such means as patents; wider use of government powers, additional to criminal law, to prevent the development of unlawful combines and to prevent effects similar to those of combines; and the establishment of an intergovernmental body which would be concerned with international aspects of undesirable cartel practices.

### Section 3.—Patents, Copyrights and Trade Marks\*

**Patents.** Letters patent, which in England have been in the gift of the Crown from the time of the Statute of Monopolies (1624) and earlier, are a statutory grant in Canada and have always been so. An Act was passed in Lower Canada in 1824 wherein provision was made for the granting of patent rights to inventors who were British subjects and inhabitants of the Province. Upper Canada passed an Act in 1826, and Nova Scotia and New Brunswick passed Acts at later dates. In 1849, after the Union, a consolidating Act was passed applying to both Upper and Lower Canada, and the B.N.A. Act (1867) assigned the granting of patents exclusively to the Parliament of Canada. The Dominion Patent Act of 1869 repealed the provincial Acts and has formed the basis of all succeeding legislation.

Letters patent are now issued subject to the provisions of c. 150, R. S. C., 1927 as consolidated in c. 32, 1935, and application for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa, Canada.

The Patents, Designs, Copyright and Trade Mark (Emergency) Order, 1939, was passed to deal with conditions arising out of the War of 1939-45. The Order confers on the Commissioner of Patents power to extend the time for doing anything prescribed by the Patent Act, the Design Act and the Copyright Act; to grant licences to manufacture under enemy-owned patents, designs and copyrights; to vary existing agreements; to hold secret or to withhold from publication any disclosure that might be of service to the enemy; and to grant permission to file patent applications abroad. The main object of the licensing provisions under the Order is to permit and encourage the working in Canada of inventions protected by enemy-owned patents, which for that reason could not be utilized during the War.

#### 1.—Patents Applied for, Granted, etc., in Canada, Years Ended Mar. 31, 1940-45

Item	1940	1941	1942	1943	1944	1945

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 12,542 in 1923 and has remained between 7,000 and 8,500 for the past ten years. Of the 7,084 patents granted in 1945, 5,682 or 80 p.c. were from inventors resident in the United States,

\* The material relating to patents and copyrights has been revised by J. T. Mitchell, Commissioner of Patents, and that relating to trade marks by J. P. McCaffrey, Registrar of Trade Marks.

486 from Canadian residents and 683 from residents of Great Britain and Ireland, while residents of Germany applied for 41, of Switzerland for 63, of Holland for 21, of France for 6, of Sweden for 49 and of other countries for 53.

During the war years following 1940, patent applications in Canada, contrary to the experience of most other countries, showed a steady increase. During the fiscal year 1944-45, 12,672 applications were received which was the highest number of applications made since 1931. However, the 7,084 patents granted was the lowest number for the past 25 years. Of the total patents issued, 7,044 were in English and 40 in French; 9 were granted to women inventors.

Patents applied for during the past 15 years, by the main branches of science or industry show the chemical arts, including plastics, fuels, medicines, pulp, metallurgy, electrochemistry and chemicals, as the leaders in number of inventions. Approximately 2,000 applications in this group have been received each year from 1931 to 1937 and over 2,500 from 1938 to 1943; a slight decrease was shown in 1944. Numerous applications in this class were for synthetic resins, dyestuffs, higher grades of gasoline, vitamin addition products, alloys and powder metallurgy, and the substitution of plastic for metal in many articles.

Inventions in the electrical class dealing with power generation and distribution, lighting, heating and intelligence transmission have been over 1,500 per year since 1936 reaching a peak of about 2,000 in 1938 and remaining relatively steady at between 1,600 to 1,700 since. Improvement in refrigeration, low-power fluorescent lighting, ultra-high frequency radio transmission, receiving apparatus and electrical apparatus involving electronics and their uses have been numerous in this group.

Transportation applications, including patents for transporting persons, goods and material by air, land or water, and especially in the substitution of paper and fibre for metals in making containers for goods in transit, had reached 2,000 in 1931 but, with the exception of 1936, have kept to the 1,000 to 1,200 level.

Heat and power inventions, involving hydraulic power, internal combustion and steam generators, heat transfer and control; patents for textiles; and the treatment of material of all kinds such as leather, metal, paper, wood fabric and tobacco have shown the least variation among the major groups. Hydraulic mechanism to control machine tools, aircraft and for many other uses was exceptionally active together with new methods and composition for improving the quality of finished textile materials.

**Copyrights, Industrial Designs and Timber Marks.**—Registration of copyright is governed by c. 32, R.S.C., 1927, and applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Copyright Act of 1921 (consolidated in c. 32, R.S.C., 1927) sets out, in Sect. 4, the qualifications for a copyright and, in Sect. 5, its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol . . . or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death".

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full

copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union, and the United States of America, as well as in Canada.

Protection of industrial designs and of timber marks is afforded under the Design Act (c. 71, R.S.C., 1927) and amendments, and the Timber Marking Act (c. 198, R.S.C., 1927) and amendments. Registers of such designs and marks are kept under the Copyright Branch of the Patent Office, and information regarding them is published in the *Patent Office Record*.

**Trade Marks and Shop Cards.**—Since Apr. 1, 1938, the Trade Marks Office has been functioning as a Branch under the Department of the Secretary of State and, therefore, as an entity separate from the Patent Office with which it had been associated previously.

The Trade Marks Office is charged with the administration of the Unfair Competition Act, 1932, which repealed all previous Acts governing trade marks, and also with the Shop Cards Registration Act, which came into force on Sept. 1, 1938. Applications for registration of trade marks and/or shop cards should be addressed to the Registrar, Trade Marks Office, Ottawa, Canada.

A Register of Trade Marks is kept, in which, subject to the provisions of the Act, any person may cause to be recorded any trade mark he has adopted, and notification of any assignments, transmissions, disclaimers and judgments relating to such trade mark. In order that the public may be kept informed in the matter of trade-mark registration, a list of marks registered appears in the *Patent Office Record* which is issued weekly.

The Shop Cards Registration Act is designed to afford a measure of protection to organizations, such as trade unions, that formerly were able to register their particular designations as Union Labels under the Trade Mark and Design Act. Registrations under the Act may be renewed every 15 years.

### Section 4.—Weights and Measures\*

The object of weights and measures administration is to maintain uniformity and accuracy in the use of legal standards of the country in industry and commerce. An outline of the principal legislation and legal standards is given at p. 527 of the 1941 Year Book.

Since 1918 the Weights and Measures Service has been administered by the Department of Trade and Commerce. For purposes of administration, the Dominion is divided into 19 districts, each in charge of a District Inspector.

The total revenue collected by the Service in the years ended Mar. 31, 1944 and 1945 amounted to \$410,458 and \$408,629, respectively, while the expenses, including salaries, amounted to \$418,752 and \$420,337, respectively.

### Section 5.—Electricity and Gas Inspection †

The Electricity and Gas Inspection Branch of the Department of Trade and Commerce administers three Acts: the Electricity Inspection Act (c. 22, 1928), the Gas Inspection Act (c. 82, R.S.C., 1927) and the Electricity and Fluid Exportation Act (c. 54, R.S.C., 1927).

The Gas Inspection Service was inaugurated on July 1, 1875, and the Electricity Inspection Service in 1894, at which time these two Services were merged to form the Electricity and Gas Inspection Services and constituted as a Branch of the Department of Inland Revenue. When the Department of Inland Revenue was merged with other Departments in September, 1918, the Electricity and Gas Inspection Services became a Branch of the Department of Trade and Commerce.

For the purpose of this administration, Canada is divided into 3 divisions and 20 districts: the total staff is 106. The nature of the work performed by these Services is entirely technical and comprises the control of all types of electricity and gas meters used throughout Canada, and the testing and stamping of every meter

\* Revised by E. O. Way, I.S.O., Director of Weights and Measures, Department of Trade and Commerce.

† With the exception of the figures on gas sold in Canada, this material has been revised by J. L. Stiver, Director, Electricity and Gas Inspection Service, Department of Trade and Commerce.

used for billing purposes, the object being to ensure the correct measurement of electricity and gas sold. Manufactured gas is also tested to determine its heating value wherever sold in Canada.

The latest report of the Branch shows 473,878 electricity and gas meters tested in the fiscal year 1945, as compared with 444,992 in the preceding year. The total revenue derived from electricity and gas inspection was \$324,728 as compared with an expenditure of \$302,988. The Branch also collected \$640,120 as export duty and licence fees under the provisions of the Electricity and Fluid Exportation Act.

Related statistics collected in the administration of the Electricity and Fluid Exportation Act will be found in the Power Chapter of this volume, p. 379.

The figures given in Table 7 of manufactured and natural gas are published monthly by the Dominion Bureau of Statistics, the previously published series of gas sold by kinds has been discontinued.

### Section 6.—Bounties

In cases where it is considered advisable for the Government to encourage the production of a particular commodity, bounties paid by the Government are recognized substitutes for protective duties. In the past they have been made use of by Canada to a considerable degree\*, but the only bounty that has involved payments by the Dominion Government during the past ten years is a bounty of 49½ cts. per ton on bituminous coal mined in Canada and used in the manufacture of iron or steel. The bounties paid for the fiscal years 1930-31 to 1940-41 are given at p. 562 of the 1942 Year Book; those for fiscal years since that time are as follows:—

<i>Year Ended Mar. 31—</i>	<i>Tonnage on Which Bounty Paid</i>	<i>Bounty Paid</i>
1942.....	765,775	\$379,058.59
1943.....	766,144	379,241.26
1944.....	646,875	320,203.10
1945.....	709,091	351,000.04

Following the outbreak of war, Dominion and provincial wartime bonuses were introduced to encourage the production of particular commodities and had an effect similar to that of bounties (the Province of Alberta, for instance, instituted a bonus on wool of 4 cts. per lb. during this period). These bonuses are dealt with in the various sections of the Year Book where they have a direct relationship to production.

Bounties are also paid by certain provincial governments. The Government of Nova Scotia, under the Mines Act relating to coal, pays a bounty under specified conditions, the amount of which was \$4,140 for each of the years 1943 and 1944, and \$4,260 for 1945. In Ontario, under the Iron Ore Bounty Act passed in 1937, the following amounts have been paid: \$118,705 in 1939, \$313,864 in 1940, \$302,016 in 1941 and \$306,090 in 1942; no bounties have been paid since 1942. Provision also exists in British Columbia for the payment of bounties on the production of pig iron and steel, but at present these materials are not being produced in that Province.

### Section 7.—Control and Sale of A'coholic Beverages†

A brief historical outline of Dominion and provincial legislation passed from time to time concerning the control and sale of alcoholic beverages is given at p. 563 of the 1942 Year Book.

The provincial liquor control Acts have been framed to establish provincial monopolies of the retail sale of alcoholic beverages, with the practical elimination of private profit therefrom. Partial exception is made in the retail sale of beer by brewers, or others which certain provinces permit, while reserving regulative rights

\* See p. 563 of the 1942 Year Book.

† Abridged from the report "The Control and Sale of Liquor in Canada", by Miss L. J. Beehler, M.A., published by the Dominion Bureau of Statistics, price 50 cents.

and taxing such sales heavily. The provincial monopoly extends only to the retail sale and not to the manufacture of alcoholic beverages. The original liquor control Acts have been modified from time to time as deemed advisable.

Important Federal wartime restrictive measures\* included War Order C.C. 14 which prohibited the production of distilled spirits for beverage purposes in Canada on and after Nov. 1, 1942, and the Wartime Alcoholic Beverages Order (P.C. 11374, Dec. 16, 1942) which prohibited the advertising of spirits, wine and beer, and limited their importation and sale. Manufacturers' sales of proof spirits were limited to 70 p.c., domestic wine to 80 p.c., and beer to 90 p.c., of the respective amounts sold in the base period (year ended Oct. 31, 1942). Imports of spirits, wine and beer were similarly restricted. The sale of alcoholic spirits of strength greater than 70 p.c. proof spirit (except that taken out of bond or bottled prior to the date the Order came in force), and the distilling of spirits for use in fortifying wines, were also prohibited. The publication of advertisements respecting any spirits, wine or beer, and the advertisement of any person as a distiller, manufacturer or brewer of spirits, wine or beer, or of any person who sells spirits, wine or beer was prohibited, with the exception of labels or information on the containers, or of an advertisement "which, in the opinion of the Minister, is in the public interest, or the legal, financial or other reasonable needs of the distiller, manufacturer, brewer or seller, requires to be published".

The Liquor Boards adopted various wartime restrictive measures, designed to conserve stocks and to ensure a more even distribution of the available supplies. These included the discontinuance of special permits, reduced selling hours in retail outlets, establishment of quotas, etc. With the removal of the restrictions of the Wartime Alcoholic Beverages Order on sales by manufacturers, the Liquor Boards increased the ration allowance to consumers. However, supplies continued to be limited by shortages of materials and manpower.

For the calendar year 1943 the production of beverage spirits in Canada was 2,700,000 proof gal. and there was also produced 20,300,000 proof gal. of industrial alcohol: in 1944 the beverage spirits totalled only 8,500,000 proof gal. whereas the industrial alcohol production rose to 26,700,000 proof gal. These figures show the profound effect of the War upon the distilling industry. Actually, the alcoholic beverage industry occupies a relatively small place in Canada's industrial life. The production of spirits was greatly stimulated by war needs, especially for the production of synthetic rubber and other munitions.

**Net Revenue from Liquor Control.**—In connection with the provincial figures of net revenue shown in Table 8, it is essential to note that they include not only the net profits made by Liquor Control Boards or Commissions, but also additional amounts of revenue received for permits, licences, etc., which are often paid direct to Provincial Governments. In addition to these figures, the Dominion Government, for the fiscal year ended Mar. 31, 1945, collected in excise duties, customs duties, excise taxes, licence fees, etc., \$44,607,200 on spirits; \$42,507,254 on malt and malt products and \$2,012,112 on wines.†

\* These restrictions were amended from time to time. By Aug. 3, 1945, all the restrictions of the Wartime Alcoholic Beverages Order except those prohibiting the advertising of spirits, etc., had been removed. War Order C.C. 14 was rescinded on Aug. 30, 1945.

† These figures do not include sales tax, details of which are not available for separate commodities.

	1945	19,181,266		1945	7,881,497

**Apparent Consumption of Liquor in Canada.**—It is not possible to obtain accurate figures on Canadian consumption of liquor. Certain Liquor Boards do not publish figures to show sales on a gallonage basis, and even were such data available for all provinces they would not necessarily represent total consumption. For example, the quantities consumed by tourists reach a considerable amount. Further, there is no definite information regarding the illegal traffic in liquor, though inquiry has revealed that such illicit business has, at times, reached fairly large proportions.

Obviously, figures of consumption are subject to error for the reasons mentioned above, and also because no consideration has been given to increases or decreases in the quantities held in stock by the Boards or by licensees.

**Spirits.**—Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown as "entered for consumption" are released from warehouses, duty paid, presumably for consumption for beverage purposes in Canada. However, part of these may be exported.

**Malt Liquors.**—Only a small part of the output of malt liquors is placed in warehouses. The available supply is, therefore, made up of (1) production; (2) changes in warehouse stock; and (3) imports.

**Wines.**—The apparent consumption of native wines is obtained by dividing the rates of excise tax into the total tax collections.

### 9.—Apparent Consumption of Beverage Spirits in Canada, Years Ended Mar. 31, 1934-45

NOTE.—Figures for the years 1924-33 are given at p. 532 of the 1941 Year Book.

1 The large quantities of non-potable alcohol produced and exported for war uses in the years 1943-45 necessitated a change in the method of estimating the consumption of beverage spirits. The exports in bond and the domestic exports do not now enter into the calculations. Details of the change are given in the Bureau of Statistics report "The Control and Sale of Liquor in Canada".

## PART II.—THE MOVEMENT AND MARKETING OF COMMODITIES

### Section 1.—Interprovincial Freight Movements\*

Statistics on interprovincial trade are difficult to collect because there are no barriers to this trade. The only comprehensive statistics available are the loadings and unloadings of freight carried by the railways. The railway traffic is segregated into 76 classes of freight and the differences between loadings and unloadings are the imports and exports *by rail* for the respective provinces. But freight might be imported by rail and exported by water, such as western grain moved to the Ontario ports of Fort William and Port Arthur. Consequently, the statistics of Table 1 must not be taken as a measure of total interprovincial trade: they indicate only the interprovincial movement of railway freight which is one aspect of that trade.

\* Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

<sup>1</sup> The freight originating and that terminating will not agree because that which originates within a certain year does not all terminate within the same year. On the other hand, some that terminated in 1945, for instance, originated within the previous year.

## Section 2.—Food Consumption of the Civilian Population, 1935-45

The importance of food consumption in the war years 1939-45 compared with the immediately preceding five-year period has been the subject of special study in the Agricultural Branch of the Dominion Bureau of Statistics owing to its significance on so many aspects of the internal economy and to the fundamental value of these statistics. Such consumption figures have been desirable and for commodities such as wheat, alcoholic beverages, meats, etc., have been compiled for a considerable period on a total basis. The War, however, made it more necessary than ever to establish consumption data on a comparable basis.

The series given in Table 2 presents official estimates of supplies of food moving into civilian consumption in pounds per capita, per annum, for the five pre-war years, 1935-39, as an average for comparison with the individual years 1944 and 1945 (the estimates for 1945 are preliminary and subject to later revision). For those foods rationed under Government control, the data have been checked by officials of the Wartime Prices and Trade Board. As pointed out, the figures include supplies moving into civilian consumption only after adjusting total production for imports, exports, changes in stocks, marketing losses, industrial uses and supplies going to the Armed Forces. Per capita figures are derived by dividing the supplies by the estimated total civilian population. All calculations are made at the retail stage of distribution except for meats where figures are worked out at the wholesale stage. The amounts of foods actually eaten would be somewhat lower than the figures cited because of losses and wastes occurring after the products reached the hands of consumers. It should also be pointed out that there are minor discrepancies in certain of the figures since storage stocks in the hands of retailers and consumers were not available for certain commodities. In the main, however, the figures represent the best summary of food consumption data that has been compiled for Canada.

All basic foods have been classified into fourteen main commodity groups. Totals for each group have been computed by using a common denominator for that group (such as milk solids—dry weight—in the case of the milk and milk products group; fat content in the case of oils and fats; and fresh equivalent in the case of fruits). All foods have been included in their basic form, that is, as flour, fat or sugar, rather than in more highly manufactured forms.

## Section 3.—The Grain Trade

### Subsection 1.—Governmental Agencies Regulating or Co-operating with the Grain Trade

The agencies exercising control of the grain trade in Canada are: the Board of Grain Commissioners, which administers the provisions of the Canada Grain Act, 1930; and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act, 1935. An article on the Canadian Wheat Board and its operations down to February, 1939, was specially prepared for the 1939 Year Book by T. W. Grindley, Ph.D., Secretary of the Board, and appears at pp. 569-580 of that

edition. An account of the organization and functions of the Board of Grain Commissioners, prepared by J. Rayner, Secretary of the Board, appears at pp. 481-482 of the 1941 Year Book.

### Subsection 2.—Distribution, Storage and Inspection of Principal Field Crops

The disposition of Canadian wheat during the crop year ended July 31, 1945, was again featured by the heavy export of this grain which totalled 342,900,000 bushels as compared with 343,800,000 bushels for the corresponding period in 1943-44, a decline of less than 1,000,000 bushels. Exports of wheat to the United States declined drastically from 159,200,000 bushels in 1943-44 to 41,900,000 bushels in 1944-45. A record crop of wheat in the United States in 1944, coupled with an urgent demand for food from Europe, served to divert much wheat from that country to overseas destinations.

A decrease in the domestic utilization of nearly 7,000,000 bushels can be attributed largely to a drop in live-stock numbers with consequent smaller requirements of wheat for feeding purposes. Wheat movement into the Canadian feed deficit areas of Eastern Canada and British Columbia under the Dominion Freight Assistance Policy was somewhat less during the 1944-45 season than it was in the preceding year, owing to the materially improved grain production in these areas in 1944 as compared with production in 1943.

### 3.—Production, Imports, Exports and Domestic Use of Canadian Wheat and Wheat Flour, Crop Years Ended July 31, 1940-45

(Millions of Bushels)

Item	1939-40	1940-41	1941-42	1942-43	1943-44	1944-45
Carryover Aug. 1.....	102.9	300.5	480.1	424.0	594.5	356.5

<b>Totals, Disposition.....</b>	<b>323.4</b>	<b>360.6</b>	<b>370.9</b>	<b>385.6</b>	<b>522.9</b>	<b>515.1</b>
Carryover July 31.....	300.5	480.1	424.0	594.5	356.5	258.4

The domestic and export trade in Canada's five principal grain crops are shown in some detail in Table 4. Of the five grains, only the exports of oats and barley in 1944-45 displayed any increase over those of the previous year; rye exports declined nearly 50 p.c. while flaxseed shipments were less by almost 66 p.c.

### 4.—Distribution of Canadian Grain Crops, Crop Year Ended July 31, 1945

(Millions of Bushels)

**Licensed Grain Elevator Capacity in Canada, Dec. 1, 1945.**—Total licensed grain elevator storage capacity, as of Dec. 1, 1945, stood at approximately 566,700,000 bushels as compared with 596,400,000 at the same date a year ago and 597,800,000 bushels in 1943. While the total licensed capacity of elevators and permanent annexes has declined somewhat during the past couple of years, the greatest decrease in licensed storage capacity has been apparent in the temporary and special annexes. Most of the reduction has taken place in the western division. Despite the decline, however, total licensed storage capacity remains more than 30 p.c. above the Dec. 1, 1939, licensed capacity of 423,000,000 bushels.

**Wheat Flour.** Total production of wheat flour in Canada for the crop year 1944-45 amounted to 24,684,403 barrels, as against 24,288,877 barrels in 1943-44. Exports increased from 13,464,371 barrels in 1943-44 to 13,923,832 barrels in 1944-45. Domestic flour consumption varied little; approximately 10,700,000 barrels were consumed in 1943-44 and 10,900,000 in 1944-45. During the 1944-45 season the mills operated at about 91.2 p.c. of their capacity and reached as high as 98.1 p.c. in the month of November, 1944. Statistics of employees, power installation, value of products, etc., for flour and feed mills for 1943 are given in Table 9 of the Manufactures Chapter at pp. 400-401.

## Section 4.—Marketing of Live Stock and Live-Stock Products\*

Since the outbreak of war in 1939, there has been a great increase in the demand for live stock and live-stock products in the form of meats, dairy products, poultry and eggs. These products have not only been required in greater volume to meet requirements of the United Kingdom and other United Nations, but the demand in Canada has expanded sharply as a result of greater purchasing power in the hands of the consumers. Live stock thus makes a very important contribution to farmers' income and also provides the basis for a large slaughtering and meat-packing industry in Canada.

**Live-Stock Marketings, 1944.**—Marketings of all classes of live stock, except calves, reached an all-time high in Canada in 1944, due largely to the strong demand existing for meat products both on the domestic and foreign markets. Cattle marketed in Canada in 1944 numbered 1,528,947, as compared with 1,243,888 in 1943. Marketing of calves totalled 701,039 as compared with 643,569 in 1943. Marketings of hogs through commercial channels in 1944 totalled 8,863,830 as compared with 7,149,917 in 1943. Marketings of sheep and lambs were 1,050,953 in 1944 as compared with 887,199 in 1943.

The interprovincial and export movement of all classes of live stock in 1944 showed increases over the previous year. Total shipments in 1944 with figures for 1943, in parentheses, were as follows: cattle 621,075 (460,024); calves 192,906 (182,156); swine 1,887,092 (1,582,979); and sheep 377,946 (296,694).

\* Revised in the Agricultural Branch, Dominion Bureau of Statistics. For more detailed information on this subject, see "Live Stock and Animal Products Statistics", published annually by the Dominion Bureau of Statistics; and the "Annual Market Review", published by the Live Stock Branch of the Dominion Department of Agriculture. Statistics of live stock and poultry are given at pp. 230-235 of this volume.

**Slaughtering and Meat Packing.**—The growth of this industry has been accompanied by a concentration of the major part of the production of the industry into a comparatively small number of large establishments, thereby facilitating greater efficiency of operation and the utilization of by-products. There has been a large increase in the number of establishments since 1930, only 76 firms having reported in that year, whereas in 1931 the number was 147, owing to the inclusion of wholesale butchers operating small plants engaged in slaughtering only. The inclusion of these small establishments did not affect materially the value of production of the industry, which increased from \$3,799,552 in 1870 to \$7,132,831 in 1890 and to \$22,217,984 in 1900. In the next decade it more than doubled, attaining a value of \$48,527,076 in 1910, and by 1920 a value of \$240,544,618 was reported. In 1944 it was \$543,034,100 (the highest on record), as compared with \$228,500,487 in 1940. The principal statistics of the industry for 1943 appear in Chapter XIV, Table 9 at pp. 400-401. The slaughtering reported by establishments in the industry in 1944 were: cattle 1,427,488, calves 678,831, lambs and sheep 986,303, and hogs 9,066,536.

Establishments that prepare meat products for export are subject to inspection under the Meat and Canned Foods Act. In practice these include all the principal packing establishments but do not include local wholesale butchers included in the slaughtering and meat-packing industry above, nor slaughtering by retail butchers and by farmers for their own use and local sale.

**Meat Consumption.**—The estimates of per capita meat consumption shown in Table 12 represent the consumption of the civilian population only. In order to arrive at a proper comparison of meat consumption during the war years with the years before the War, figures of supply have been revised to eliminate the amounts of meat used for non-civilian purposes. These deductions include purchases by the Department of Munitions and Supply for the Army, Navy and Air Force, supplies for ships' stores, Red Cross parcels and other similar uses.

The Canadian population figures used to arrive at the per capita consumption estimates have been adjusted for the members of the Armed Forces serving outside of Canada and living in barracks in Canada. All estimates in Table 12 are on a carcass weight basis except canned meats which are in terms of the product.

<sup>1</sup> Includes edible offal of beef and veal.<sup>2</sup> Customs data of exports to countries other than the

United Kingdom together with Meat Board records of quantities booked or cleared for export to the United Kingdom in which allowance has been made for 56,900,000 lb. of boneless meat converted to carcass basis.

<sup>3</sup> Not available separately; quantity small and included with imports of beef.<sup>4</sup> Not available.<sup>5</sup> The positive changes in stocks represent deductions from the available supply during a given year and therefore are subtracted.<sup>6</sup> Includes lard used in shortening.

**Export and Import Trade in Live Stock and Live-Stock Products.**—The exports of live stock and live-stock products from the Dominion to the United Kingdom, the United States and all countries, are shown for the calendar years 1942-45, in Table 15 of the chapter on External Trade, at pp. 542-546, and imports in Table 14 at pp. 524-527.

## Section 5.—Cold Storage

**Cold-Storage Warehouses.**—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6; now consolidated as c. 25, R.S.C., 1927), subsidies have been granted by the Dominion Government to encourage the construction and equipment of cold-storage warehouses open to the public, the Act and regulations made thereunder being administered by the Department of Agriculture.

## 13.—Cold-Storage Warehouses in Canada, by Provinces, 1945

NOTE.—The figures in this table, which do not include creameries with mechanical refrigeration, were supplied by J. F. Singleton, Associate Director, Marketing Service, Dairy Products Division, Dominion Department of Agriculture.

**Cold-Storage Stocks.**—Since 1917 statistics of stocks on hand of food commodities in cold storage have been published but throughout the years the data have been expanded by many subdivisions of the products and by the inclusion of more foods. Monthly and annual reports issued by the Agricultural Branch of the Dominion Bureau of Statistics give detailed information on cold-storage holdings. (See Chapter XXXII under "Production".)

**Section 6.—Merchandising and Service Establishments\***

Two comprehensive surveys of the business carried on by retail and wholesale trading establishments in Canada have been made. The first census of this type was undertaken in 1931, in connection with the Seventh Decennial Census. This Census related to the business transacted in 1930, and covered the operations of service establishments, including hotels, in addition to retail and wholesale trading firms. The results for 1930 are contained in Volumes X and XI of the Census of 1931. A second Census of Merchandising and Service Establishments, taken in 1941 as part of the Eighth Decennial Census, related to the business transacted in the census year. The results of that Census, in so far as retail trade is concerned, are given in Volume X of the 1941 Census, while the results for wholesale and service establishments will be contained in Volume XI, which is not yet through the press. A summary of the main features of the retail and wholesale marketing structure of the country, as revealed in the census results, is presented in the following Subsections. This information is given in more detail at pp. 597-621 of the 1945 Year Book.

**Subsection 1.—Wholesale Merchandising**

Wholesale trade, for census purposes, has been taken to include all agencies of distribution between the producer on the one hand and the retailer or industrial or other large user on the other hand. It does not include manufacturing plants but does include manufacturers' sales branches or offices operated at locations apart from plants. In addition to regular wholesalers (including exporters and importers), agents, brokers and commission merchants have been included, as well as assemblers of primary products, such as co-operative marketing associations, grain elevators, and city or country buyers of primary products. The wholesale census also includes the bulk tank stations operated by distributors of petroleum products.

\* Revised by A. C. Steedman, B.A., Chief, Census of Merchandising and Services Branch, Dominion Bureau of Statistics.

In all, 24,758 wholesale establishments were recorded in the results of the 1941 Census and these provided employment for 117,471 persons who received \$189,449,000 in salaries, wages and commissions. In addition, there were 13,656 proprietors of unincorporated firms employed in wholesale trading. An aggregate volume of business amounting to \$5,290,751,000 was reported for these wholesale establishments, of which \$4,278,342,000 represented sales made by the reporting firms on their own account and \$1,012,409,000 represented sales made on commission for others.

Since one type of wholesaler may sell to another, there is some duplication in the aggregate sales volume of all wholesalers. Nor can the volume of wholesale trade be related to retail trade, since a considerable portion of the business of wholesalers is done with industrial or large users or with foreign buyers and thus never enters the retail field.

Wholesalers are classified on various bases such as according to amount of annual sales, number of employees, form of organization, number of marketing units, etc. The two fundamental bases for classification, however, are by type of operation and by kind of business.

**Type of Operation.**—Wholesale establishments have been classified primarily by type of operation, that is, according to functions performed, 31 individual types having been grouped into six major classifications. Wholesalers proper, consisting of firms performing most of the functions of wholesalers, such as buying and selling on their own account, extending credit, providing delivery service, etc., form the most important major group. This group, in addition to regular wholesale merchants, includes importers and exporters of merchandise and also voluntary group wholesalers who service a particular group of more or less closely associated retail stores. There were 9,417 establishments classified as wholesalers proper in 1941, and these had sales of \$2,358,475,000 or 44.6 p.c. of the aggregate wholesale sales and employed 74,800 persons who received \$117,390,000 in salaries, wages and commissions.

The next largest group in volume of business was manufacturers' sales branches or offices maintained at locations apart from plants and whose sales amounted to \$1,206,994,000 or 22.8 p.c. of total wholesale sales. These 1,622 establishments provided employment for 20,782 persons with salaries, wages and commissions of \$40,034,000.

Agents and brokers, composed of manufacturers' agents, commission merchants, import and export agents, brokers, etc., doing business on a commission basis for others and, as a rule, carrying no stocks, accounted for \$907,520,000 sales or 17.2 p.c. of the total sales of all wholesalers. Salaries to 4,423 employees in this group of wholesalers, totalled \$8,677,000.

Establishments numbering 7,366 with a sales volume of \$453,301,000 or 8.6 p.c. of the total were classified as assemblers of primary products. This group includes firms engaged in the assembling and distributing of farm and other primary products, such as co-operative marketing associations and sales agencies, grain elevators, and city or country buyers of primary products who purchase directly from producers. This type employed 10,499 persons to whom salaries, wages and commissions of \$13,356,000 were paid.

The 3,973 petroleum bulk tank stations engaged in the distribution of petroleum products by tank car to retailers and such users as farmers, fishermen and small industrial users transacted a business of \$216,292,000, constituting 4.1 p.c. of the total wholesale trade, and paid \$6,890,000 to 4,968 employees.

The sixth major group is a residual class including all other types, such as film exchanges, distributing warehouses and government-owned companies. These numbered 274 establishments, which had sales of \$148,168,000 and provided employment for 1,999 persons who received \$3,102,000 in salaries and wages.

**Kind of Business.**—The other major basis for classification used in the wholesale census was by kind of business, according to the main commodity or commodities handled. There were about 150 individual kind-of-business classifications and these were grouped under 25 major classifications. Among wholesalers proper, the largest volume of business was transacted by the groceries and food specialties group, with recorded sales of \$347,472,000, followed by the food products (except groceries) group with sales of \$237,935,000. Next in importance, in point of view of sales, amounting to \$207,856,000, was the machinery group. The most important trade according to volume of sales among manufacturers' sales branches was the metals and metal work classification with 75 establishments doing a business of \$177,152,000. Important, also, in this type were the sales of dry goods and apparel, electrical goods, petroleum products and groceries and food specialties trades. The farm products (raw materials) group doing a business of \$364,277,000 formed the most important kind-of-business classification among the agents and brokers so far as volume of business is concerned, followed by the dry goods and apparel group with a sales volume of \$116,914,000 but with a greater number of establishments participating. Assemblers of primary products, as their name implies, were concentrated in the farm products (raw materials) trade, this kind of business accounting for 6,333 establishments and having sales of \$368,355,000. The food products (except groceries) trade was the other important kind-of-business classification found in the assemblers group and this trade accounted for sales of \$73,777,000.

**Provincial Distribution.**—Almost two thirds of the total wholesale trade of Canada was concentrated in the Provinces of Ontario and Quebec, the former Province having sales valued at \$1,744,664,000 or 33 p.c. of the total wholesale sales and the latter, sales of \$1,726,521,000 or 32.6 p.c. of the total. Manitoba came next with \$579,613,000 or 11 p.c., while British Columbia accounted for 7.2 p.c.; Alberta, 6.1 p.c.; Saskatchewan, 5.3 p.c.; Nova Scotia, 2.9 p.c.; New Brunswick, 1.7 p.c.; and Prince Edward Island, less than 1 p.c.

The proportion of the total trade transacted in each province varied for the different major types into which the wholesale field is divided. For wholesalers proper, Quebec came first in 1941 with 36.0 p.c. of the total trade, followed closely by Ontario with 34.7 p.c. The Prairie Provinces accounted for 15.4 p.c., British Columbia for 8.1 p.c. and the Maritime Provinces for the remaining 5.8 p.c. Apart from a slightly greater concentration in Quebec and Ontario, the distribution of sales for manufacturers' sales branches was similar to that for wholesalers proper. On the other hand, the Prairie Provinces occupied a much more important role in the other categories. They accounted for 29.3 p.c. of the total sales of all petroleum bulk tank stations, 34.2 p.c. of the sales of all agents and brokers and 66.4 p.c. of the total business done by all assemblers of farm products.

**Miscellaneous Analyses of Wholesale Data.**—According to the 1941 Census, almost 64 p.c. of all wholesale sales in Canada originated in the four largest cities of Montreal, Toronto, Winnipeg and Vancouver, while 81.8 p.c. of all wholesale trade was attributable to cities of over 30,000 population.

An analysis of wholesale trade by size of business revealed that establishments with an annual sales volume of \$1,000,000 or over accounted for 3.6 p.c. of the total number of establishments and 55.1 p.c. of the total sales, while 4,335 establishments or 17.5 p.c. of the total number had annual sales of less than \$10,000. The distribution of wholesalers by size of business varies somewhat for the different major types of operation. Petroleum bulk tank stations were found to be concentrated more in the smaller size groups, only 15.2 p.c. of the sales having been made by establishments in the million-dollar sales class. The same is found to be true for assemblers of primary products, where less than 20 p.c. of the business was done by establishments with annual sales of over \$1,000,000. Among wholesalers proper, 4.5 p.c. of all establishments had sales of \$1,000,000 or over and these accounted for 51.4 p.c. of the total sales of this group. Agents and brokers showed slightly higher percentages in the largest size-of-business group, namely, 7.6 p.c. of all establishments and 65.7 p.c. of sales. The greatest concentration of sales in the largest size category appeared in manufacturers' sales branches, where establishments with sales of \$1,000,000 or over were responsible for 73.3 p.c. of the sales for the group.

Wholesale establishments were also grouped according to average number of persons employed in the business. There were 7,053 wholesale establishments in 1941, or about 28.5 p.c. of the total number, which operated without the aid of paid employees. These represent mainly, agents and some assemblers of primary products such as country buyers of farm products, the work in these cases being carried on by the proprietor alone. There were only 90 establishments with as many as 100 employees and these transacted 8.7 p.c. of the total business.

A further analysis of wholesalers by form of organization revealed that of the 24,758 establishments in the wholesale field, 10,815 were operated as individual proprietorships and did a volume of business amounting to \$799,307,800 or 15 p.c. of the total. There were 1,394 partnerships and these accounted for \$218,769,800 or 4.2 p.c. of the total sales, while incorporated companies operated 12,157 establishments with sales of \$4,122,516,400 or 77.9 p.c., co-operative associations, numbering 366, had sales of \$143,111,800 or 2.7 p.c. The proportion of business done by incorporated firms varied with the different major types of operation. Incorporated firms accounted for almost 100 p.c. of the business done by manufacturers' sales branches, for only 48 p.c. of agents' and brokers' sales and for 57 p.c. of the sales of assemblers of primary products.

Of the 9,417 wholesalers proper, 7,756 establishments or 82.4 p.c. of the total were operated as single establishments with no other branch or office, and these accounted for 58.4 p.c. of the total trade of wholesalers proper. About 80 p.c. of all petroleum bulk tank stations were operated as single-unit establishments and 91 p.c. of all agents and brokers. The inclusion of line elevators in the farm products trade gave a greater relative importance to the multiple form of operation in this group than in the other groups into which the wholesale field is divided.

Wholesalers' sales were also analysed by type of purchaser. Sales of wholesalers proper to retailers amounted to 41 p.c. of the total sales of this group, while 31 p.c. went to industrial or other large users, 14 p.c. to other wholesalers, 2 p.c. to consumers and 12 p.c. to foreign buyers. As might be expected, a greater pro-

portion of sales of manufacturers' sales branches went to industrial and other large users, viz., 52 p.c., while only 24 p.c. went to retailers and 16 p.c. to other wholesalers. Export sales of this group comprised 7 p.c. of the total. Agents and brokers reported 36 p.c. of their sales as made to other wholesalers, 31 p.c. to industrial and large users, 18 p.c. to foreign buyers and 15 p.c. to retailers. About 43 p.c. of sales made by assemblers of primary products were reported as going to industrial and large users. Live stock sold to packers and raw tobacco sold for further processing were chiefly responsible for this distribution. Other wholesalers purchased 36 p.c. of the sales of assemblers, while only 10 p.c. went direct to retailers. Tables giving detailed classifications of the wholesale trade, by kind of business, by type of operation and according to number of employees are given at pp. 597-604 of the 1945 Year Book.

### Subsection 2.—Retail Merchandise Trade

**Extent of the Known Retail Trade.**—The total known retail merchandise trade in Canada for 1941 as recorded in the results of the Merchandising Census was valued at \$3,667,715,600 or an average of \$319 per person. By far the greatest proportion of this business was transacted through retail stores. The total volume of business transacted by retail stores in 1941 was \$3,440,901,700, but included in this figure are certain components that cannot be considered as retail merchandise sales. Some retail stores secure a minor proportion of their total revenue from repair work while others sell merchandise on a wholesale basis to a limited extent. On deducting these subsidiary amounts from the over-all turnover of \$3,440,901,700, there remains a figure of \$3,354,499,100 which represents retail merchandise sales through retail stores.

In addition to the business done by retail stores, sales of merchandise at retail are made by some other types. Hotels sell meals, alcoholic beverages, tobacco, magazines, etc. Wholesale establishments transact a small volume of retail business. Some manufacturing plants and manufacturing bakeries and dairies in particular, sell directly to the ultimate consumer. Co-operative associations and line elevator companies are engaged in the retail distribution of farmers' supplies. Retail sales are made by itinerant operators and also by persons carrying on a retail business from their homes as a minor activity in conjunction with their main occupation.

The retail business of the types mentioned above was measured in the census and is summarized in Table 15. The two chief unmeasured elements in the total retail trade are the sales made on farmers' markets in urban centres and the sales made direct to householders by producer-distributors of dairy products.

15.—Total Known Retail Merchandise Trade, 1941

Item	Amount	P.C. of Total	Item	Amount	P.C. of Total

			<b>Total Known Retail Merchandise Trade....</b>	<b>3,667,715,600</b>	<b>100.00</b>

**Retail Stores and Sales.**—The remainder of this Section is confined to an analysis of the operations of retail stores as considered in the broader sense to include not only stores but also filling stations, restaurants, lumber yards and all other types of outlets engaged chiefly in the sale of merchandise at retail. Including all such types, there were 137,331 retail outlets recorded in the 1941 Census. These required the services of 297,047 full-time and 95,561 part-time employees to whom \$314,438,000 was paid in salaries and wages. In addition, there were 131,823 proprietors of unincorporated firms working on their own account. Annual sales totalled \$3,440,902,000 and year-end stocks were valued at \$540,864,000.

**16.—Summary of Retail Merchandise Trade, by Provinces, 1941**

**Retail Trends, 1930-41.**—The scope of the 1941 Census varied slightly from that of 1930. On reducing the results of the two surveys to a comparable basis increases of 14·8 p.c. in the number of retail outlets and 25·6 p.c. in the dollar volume of business transacted were recorded between the two census periods. The 25·6 p.c. gain in dollar sales between 1930 and 1941 does not accurately reflect the increase in the physical volume of trading, prices in the latter year averaging 8 p.c. lower than in the former according to the Bureau's retail price index.

Sales results recorded in New Brunswick, Quebec, Ontario, Alberta and British Columbia deviated only slightly from the average 25·6 p.c. gain for Canada, while the increase in the number of stores in these provinces ranged from 12 p.c. in Ontario to 22 p.c. in British Columbia. While there was a gain of 3 p.c. in the number of stores operating in Saskatchewan, sales remained practically unchanged from 1930. Sales increased by 12 p.c. and 16 p.c. in Manitoba and Prince Edward Island, respectively, while the intense wartime activity in Nova Scotia resulted in a 67 p.c. gain in sales and a 10 p.c. increase in the number of stores.

Retail stores for census purposes are classified into 10 kind-of-business groups. The 25 p.c. gain in retail business between the intercensal years reflected a greater sales volume in 1941 than 1930 for each group except the second-hand group where sales declined 6 p.c. Sales increases ranged from 3 p.c. for country general stores to 73 p.c. in the restaurant group. Results analysed by particular kinds of business indicated varying trends between 1930 and 1941 for the individual trades. The shift in trading from grocery stores to stores selling both groceries and fresh meat and classified as combination stores was revealed in the 86 p.c. sales increase in combination stores as compared with a gain of 9 p.c. in grocery store sales. Filling stations were almost twice as numerous in 1941 as in 1930 while receipts were up 137 p.c. between the two years. Marked developments occurred both in the number and sales of variety stores. The sales volume of variety stores gained 93 p.c. in the

intercensal years while the number of stores increased from 513 to 1,085. Pronounced gains in receipts were recorded by restaurants, cafeterias, and other eating places. The 73 p.c. increase may be attributed, to some extent, to higher consumer income as well as to increased population in urban centres due to wartime industrial expansion. Furniture-store sales registered an increase of 56 p.c. and other retail outlets recording marked expansions in sales were as follows: drug stores, 31.5 p.c.; women's apparel and accessories stores, 39.7 p.c.; tobacco stores and stands, 40.8 p.c.; jewellery stores, 44.2 p.c.; and motor-vehicle dealers, 46.3 p.c.

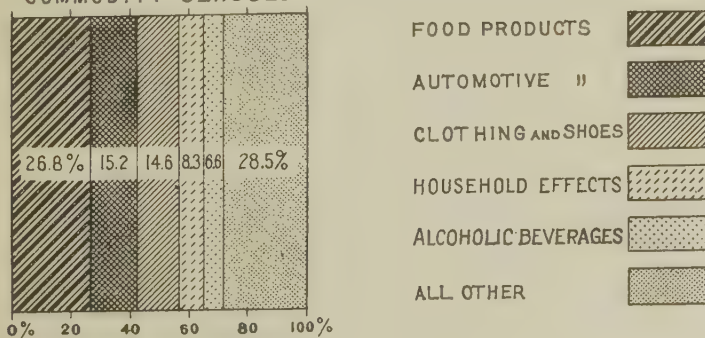

A more comprehensive study of the number of stores and sales is given at pp. 606-607 of the 1945 Year Book.

**Commodity Distribution of Consumer Dollar.**—The two diagrams below illustrate the relative proportions of the consumer dollar spent for various groups of commodities through all types of retail outlets. That is to say, these

**DISTRIBUTION OF THE CONSUMER DOLLAR  
AMONG  
INDEPENDENT, CHAIN AND DEPARTMENT STORES  
CENSUS OF 1941**

**PROPORTION OF EXPENDITURES  
BY  
COMMODITY CLASSES**

percentages are based on the sales made not only through retail stores but also on the retail sales made through other channels such as manufacturing bakeries, dairies and other outlets.

In 1941 food products came first in point of view of dollar sales accounting for 26.8 p.c. of the total expenditure. Automotive products, including not only purchases of new and used motor-vehicles but also gasoline and oil, tires and tubes, parts and accessories, came second forming 15.2 p.c. of the total. Clothing and shoes came third with 14.6 p.c. followed by household effects with 8.3 p.c. Sales of alcoholic beverages amounted to 6.57 p.c. The "all other" classification on the chart includes building materials, 4.7 p.c.; receipts from the sale of meals, 4.2 p.c.; fuel, 3.1 p.c.; drugs, drug sundries and toilet goods, 2.3 p.c.; piece goods, notions and smallwares, 1.8 p.c.; and other merchandise, 12.4 p.c.

**Large-Scale Merchandising.**—The development of large-scale merchandising in Canada has, on the whole, followed the same trend as shown by other countries. Large establishments, such as department stores, previously showed a marked development but between 1930 and 1941 this trend was not followed up. The chain-store system of distribution is also important, especially in such lines as grocery and meat and variety stores.

Although chain and department stores accounted for a considerable proportion of the retail trade in Canada, the bulk of retail business was transacted through independent outlets in 1941. The relative position of chain-store sales changed very slightly in the two census years, chain-store sales forming 18.3 p.c. of all retail trade in 1930 and 18.7 p.c. in 1941. Department stores gave way to a very small degree in favour of independent store sales, department stores transacting 12.9 p.c. and 11.0 p.c. of the retail sales in 1930 and 1941, respectively. The percentage of the total retail trade transacted by independent stores increased from 68.8 p.c. in 1930 to 70.3 p.c. in 1941.

An analysis by kind of business revealed that some trades were predominantly an independent store business. Independently operated country general stores accounted for 96.2 p.c. of the sales of such stores, while independent filling stations transacted 91.4 p.c. of that business. Men's and women's specialty clothing stores, restaurants, tobacco stores and stands, grocery stores and drug stores each did over 80 p.c. of their business through the independent type of retail outlet. The independent shoe store was the major type of operation in that trade in 1941, transacting 62.7 p.c. of the business, but this proportion was considerably smaller than the 77.3 p.c. done by independent stores in 1930, indicating an expansion in the shoe chain business during the intercensal period.

Tables showing the relative positions of independent, chain and department stores, by economic divisions, 1930 and 1941, as well as retail merchandise trade in all stores by selected kinds of business and by types of operation, 1930 and 1941, are given at pp. 609-610 of the 1945 Year Book.

**Chain Stores.**—For census purposes, chains are taken to mean all groups of four or more stores (except department stores) under the same ownership and management and carrying on the same kind of business. All department stores are considered as independents irrespective of the number of stores operated by any one company.

The 532 chain companies operating 8,011 stores transacted 18.7 p.c. of the total retail trade in the census year. The corresponding ratio in 1930 was 18.3 p.c. Variety stores were operated chiefly on a chain basis, variety chain-store sales

forming 86.9 p.c. of the total. Whereas the relative position of grocery chain stores declined in the intercensal period, there was a marked expansion in both the number and sales of combination stores (groceries and fresh meats). The increase may be attributed to the development of many retail chain outlets from grocery to combination stores through the addition of a meat department. The importance of chain filling stations declined sharply to make way for independently operated units, resulting from a change in policy of the large petroleum distributors. Many filling stations formerly owned and operated by wholesale distributors, were leased to individual proprietors.

**Retail Merchandise Trade in Urban Centres.**—The greatest proportion of retail trade in 1941 was transacted in the urban centres, having populations of 100,000 or over. While these cities formed 23 p.c. of Canada's population, their sales amounted to 40 p.c. of the retail sales transacted in the census year. At the other end of the scale, the small villages and rural areas, places of less than 1,000 population, accounted for 49 p.c. of the population and only 17 p.c. of the retail trading. Urban centres falling in the 1,000 to 30,000 size-of-locality grouping and representing 20 p.c. of the population derived 29 p.c. of the retail sales. Cities of the 30,000 to 100,000 population class, housed 8 p.c. of the persons in Canada and transacted 14 p.c. of the sales. It should be pointed out that sales are attributed to the centres where the purchases are made, rather than to the areas from which that business is drawn. Thus it becomes apparent that many urban centres act as distributing points for surrounding areas, and that the business attributed to these cities does not necessarily reflect the consumer demand within the city.

The intercensal expansion of population, stores, and sales for all cities of over 10,000 population in 1941 is given at pp. 611-612 of the 1945 Year Book.

**Miscellaneous Analyses of Retail Data.** An analysis of retail stores classified according to sales volume revealed that 31.6 p.c. of total stores operating in 1941 had annual sales of less than \$5,000 but these stores transacted only 2.9 p.c. of the total business; 40.3 p.c. of the stores with sales ranging between \$5,000 and \$20,000 did 17.2 p.c. of the retail trading; stores in the \$20,000 to \$50,000 size-of-business class did 23.4 p.c. of the business and operated 19.2 p.c. of the total number of stores; 5.5 p.c. of the stores with sales of between \$50,000 and \$100,000 transacted 14.8 p.c. of the business; and the remaining 3.4 p.c. of the stores, each with annual sales exceeding \$100,000, accounted for 41.7 p.c. of the total retail sales.

When grouped according to the number of paid employees utilized in the business during the year, retail stores varied widely. More than 41 p.c. of the stores operated without the aid of paid employees and these transacted 9 p.c. of the retail business; 45 p.c. of the stores employed from 1 to 4 persons and their sales formed 33 p.c. of the total; 12 p.c. employed between 5 and 19 employees and accounted for 30 p.c. of the business; 1 p.c. had from 20 to 49 employees with 11 p.c. of the total sales volume; considerably less than 1 p.c. of the stores employed over 50 persons but these accounted for 17 p.c. of the retail sales in 1941.

Not all stores were able to report data concerning the extent to which their sales were made on credit, but those stores from which such information was secured reported that 28 p.c. of their total business was transacted on some type of credit basis. Credit sales are largest in stores dealing in durable goods, such sales, to a great extent, being payable on an instalment plan, but credit business is also an important factor in the clothing trades.

More detailed information concerning retail trade in 1941 is given at pp. 604-615 of the 1945 Year Book and in Volume X of the 1941 Census Report.

### Subsection 3.—Retail Service Establishments

The Census of Merchandising and Service Establishments included in its scope not only firms engaged in the retail and wholesale merchandise trades but also a large number of different types of service establishments in which the annual revenue represented receipts from services performed rather than from the sale of merchandise. A considerable number of firms overlap these two functions, being engaged partially in selling goods and partially in providing services. Establishments were assigned in their entirety to either the merchandising or service section of the census on the basis of their major activity as measured in terms of annual receipts.

There were 49,271 service establishments which came within the scope of the 1941 Census with receipts of \$254,678,000 as compared with 42,223 service establishments with receipts of \$249,455,900 in 1930. Service establishments in 1941 gave employment to 62,781 full-time employees and to 21,647 persons on a part-time basis and spent \$62,984,000 in salaries and wages.

There was a marked expansion both in the number and receipts of beauty parlours between 1930 and 1941. Results of the 1930 Census showed 2,385 beauty parlours with \$6,109,300 receipts as compared with 5,619 beauty parlours operating in 1941 and having receipts of \$12,884,400. Receipts of establishments in the photographic group increased from \$5,078,600 in 1930 to \$6,901,300 in 1941, revealing a major development in photographers' services. Results of the 1941 Census also showed an amount of \$43,329,800 spent for laundry and dry cleaning services while receipts for such services in 1930 amounted to \$33,944,500. Repair shops, including jewellery and watch repairs, automobile and bicycle repairs, blacksmith shops, and upholstery and furniture services, had receipts of \$37,512,100 in 1941.

**Hotels.**—Results of the Census of Hotels for 1941 showed 5,646 hotels in Canada with annual receipts of \$147,488,156, of which \$78,695,770 or 53 p.c. represented the sale of alcoholic beverages, \$57,706,350 or 39 p.c. was obtained from room rentals and the sale of meals while the remaining 8 p.c. represented receipts from miscellaneous sources. The 5,646 hotels included 4,844 establishments which were open for twelve months of the year with receipts of \$140,612,327, and 802 hotels which operated only during certain months, generally from May to September, with receipts of \$6,875,829.

There were 1,494 of the 4,844 full-time hotels with annual receipts of less than \$5,000 whose aggregate 1941 receipts amounted to \$2,897,800; 58 hotels had annual receipts of over \$200,000 with a gross revenue of \$31,142,900; 1,563 hotels each had annual receipts of between \$5,000 and \$19,999; 1,118 establishments had revenues ranging between \$20,000 and \$49,999; 442 hotels were in the \$50,000 to \$99,999 class; while 169 hotels had annual revenues of between \$100,000 and \$199,999.

Of the 4,844 full-time hotels, 1,939 or 40 p.c. had 10 rooms or less; 1,755 hotels had from 11 to 25 rooms; 776 from 26 to 50 rooms; and 280 from 51 to 100. Only 94 hotels had over 100 rooms and of this number 69 were in the 101 to 200 room class, 15 had from 201 to 500 rooms and 10 had more than 500 rooms.

**Motion Picture Statistics.**—There were 1,298 theatres operating in Canada in 1944 and these had 208,167,180 paid admissions. Box-office receipts, exclusive of amusement taxes, amounted to \$53,173,325 while Dominion and provincial amusement taxes collected at motion picture theatres amounted to \$13,555,730. In addition, the 131 itinerant exhibitors had receipts of \$337,225, collected \$67,767 in amusement taxes, and reported admissions numbering 1,422,412. Moreover, there were 4 establishments operating in Canada in 1944 as legitimate theatres, which had box-office receipts of \$998,942 plus \$224,367 amusement taxes and had 950,169 paid admissions.

#### Subsection 4.—Annual Estimates of Retail Trade

**Intercensal Estimates, 1931-40.**—The taking of a complete census of all retail trading establishments is a major undertaking, involving the securing of reports from some 137,000 retail stores. It is impossible to make a complete survey of this kind on an annual basis. In order to provide some measure of the extent of retail merchandise trade in the intercensal years, annual surveys were undertaken for the years 1931 to 1940 for which reports were secured from a sample of some 25,000 stores representing various trades and located in different parts of the country. The year-to-year trend as derived from this sample was applied to the census figure for 1930 in order to give estimated total sales for subsequent years. When these annual estimates were extended to 1941 it was found that the estimate for that year deviated by about 10 p.c. from the total figure secured for the census. This deviation has been spread back over the intercensal years in order to bring the estimated and census figures for 1941 into line. Revised indexes are given in Table 18.

**Estimated Retail Sales, 1942-44.**—Notwithstanding a marked contraction in the retail automotive trade following the cessation of new car production for civilian use in March, 1942, the underlying trend in retail trade continued upward throughout the war years, estimated sales for 1944 standing 20 p.c. above the level of 1941. The increase in farm purchasing power is reflected in the trend for country general stores whose sales were almost 50 p.c. above the volume of trading reported for 1941. Sales of the automotive group of establishments were 40 p.c. lower in 1944 than in 1941 while a restricted supply situation resulted in sales for the furniture-household-radio group standing about 10 p.c. below the census level.

## Section 7.—Co-operation in Canada\*

An outline of the growth of co-operative activity in Canada and of the legislation passed in connection therewith, is given at pp. 543-545 of the 1942 Year Book.

### Subsection 1.—Trends in the Field of Co-operation in 1944

During 1944, reports were received from 1,792 active co-operative business organizations engaged in marketing produce or buying supplies for their members not including fishermen's co-operatives or service co-operatives. Of these associations, 949 marketed farm products and 1,271 purchased supplies for their members or operated co-operative stores. The larger number of co-operatives purchasing supplies is explained by the fact that associations organized primarily to market produce may purchase supplies as well, and also by the fact that one association may buy several of the types of merchandise used in this analysis. Duplication because of these factors amounts to 430.

Shareholders and members numbered 690,967 and the total number of patrons, including members and non-members, was estimated to be 719,080. Total assets, after provision for bad debts and depreciation amounted to \$203,047,911 of which the book value of plant and equipment was \$40,664,827. The members' equity amounted to \$72,491,538 consisting of paid-up share capital \$15,608,150 and reserves and surplus of \$56,883,388. This was an increase in members' equity of \$10,120,784 over 1943. From 1943 to 1944 total working capital increased from \$25,503,893 to \$31,826,711. The relation of net worth to total assets increased slightly from 33.4 p.c. in 1943 to 35.7 p.c. in 1944.

Sales of farm products amounted to \$459,798,798, sales of supplies and merchandise \$65,508,771 and other revenue \$2,547,971, a total business of \$527,885,540. The increase reported in total business over the previous year amounted to \$175,069,942 which is nearly 50 p.c.

**Marketing.**—The value of farm products marketed increased from 1943 to 1944 by \$164,000,000; the increase in grain and seed alone amounted to \$130,000,000 leaving an increase of \$34,000,000 in all other commodities.

The carryover of grain at July 31, 1943, had reached the highest point in Canada's history. On Sept. 27, 1943, the Dominion Government raised the fixed initial price for wheat from 90 cents to \$1.25 per bu. Deliveries of grain to country elevators and loadings over platforms in the Prairie Provinces were 83,000,000 bu. more during the crop year 1943-44 than during the previous year. On the other hand, sales increased to such an extent that the carryover was greatly reduced at July 31, 1944. The co-operatives participated in this increased business at higher values which accounts for the increase of \$130,000,000 in the value of grain and seeds marketed.

The value of live stock, dairy products, poultry, eggs and wool marketed increased by \$32,000,000 or 27 p.c. in 1943-44 over the previous year. The greatest increase was in the sale of live stock while the highest rate of increase was in poultry and eggs. For Canada, the factory value of dairy products and farmers' cash income from the other products in this group increased by only 14 p.c.

For fruits, vegetables, honey, maple products and tobacco, the increase reported in co-operative marketings was \$663,000, or less than 2 p.c., whereas cash income from these crops increased by 12 p.c.

\* Prepared under the direction of A. E. Richards, Ph.D., Economics Division, Department of Agriculture.

In view of the reduction in stocks of grain, it is difficult to determine the percentage of the commercial marketings of grain handled through co-operatives. Using the factory value of dairy products and the farmers' cash income from other products as total values, it is estimated that about 20 p.c. of the main farm products, other than grain and seed, passed through a co-operative agency at one or more stages in the complete marketing process. Approximately 18 p.c. of the live-stock and dairy products, 12 p.c. of the poultry and eggs, 48 p.c. of the wool, 22 p.c. of fruits and vegetables, 11 p.c. of the honey, 27 p.c. of the maple products and over 90 p.c. of the tobacco were marketed co-operatively.

**Merchandising.**—The reported value of supplies and merchandise bought for members and patrons increased by about \$10,000,000; the increase in value of feed, fertilizer and spray material amounted to over \$6,000,000 and the increase in petroleum products to \$1,400,000. These increases were attributable in large measure to the increased use of feeds, fertilizer and petroleum fuel in attaining the production objectives set for Canadian agriculture. The number of associations handling food products was reduced in 1943-44 by 213 and the numbers handling feed and fertilizer, and machinery and equipment increased by 178 and 222, respectively.

**Fishermen's Co-operatives.**—In addition to the co-operative business summarized in Tables 20 to 24, there were 68 fishermen's co-operatives operating in 1943-44 with an estimated membership of 7,193. The total volume of business amounted to \$5,055,109, a substantial increase over that reported for the previous year.

**Insurance.**—Mutual fire insurance is one of the oldest forms of co-operation in Canada. For the year ended Dec. 31, 1943, 406 farmers' mutual fire insurance companies carried insurance risks amounting to more than \$1,354,000,000 by farmer members for mutual benefit. Net admitted assets were \$14,500,000 and net losses paid in 1943, amounted to \$2,500,000.

**Credit Unions.**—At the end of 1944, 2,051 credit unions were chartered in all the provinces of Canada. This was an increase of approximately 12 p.c. in the number of credit unions since 1943. During 1944, Canadian credit unions loaned approximately \$36,000,000 for "provident and productive purposes".

**Miscellaneous and Service-Type Co-operatives.**—Several kinds of services are rendered by co-operative associations such as telephone systems, housing, medical and hospital plans, and burial societies. At the end of 1943 there were 2,383 co-operative telephone systems with 108,027 connected telephones in operation across Canada. The total investment in these systems was over \$22,000,000.

In recent years there has been rapid expansion in medical and hospital plans with an increasing enrolment of participants. Complete statistics concerning these plans are not as yet available.

At the present time there is considerable interest in co-operative housing and a number of associations have been formed for that purpose with others contemplated. There are seven co-operative housing associations in Nova Scotia that have completed their work of construction. In Quebec, 45 housing projects are listed, some of these have built houses already. A number of co-operative houses have also been built in Alberta. It is likely that plans now prepared will lead to considerable co-operative housing construction in the near future all across Canada. Co-operative housing

projects have been undertaken in approximately 18 towns or cities in the Province of Quebec, one of which comprises 125 houses. At least 10 more projects are under consideration in that Province.

Co-operative principles have also been applied to transportation members' transportation by bus to and from work, or trucking farm products—restaurants, seed cleaning, printing and publishing, electrification, and room and board facilities.

### THE ROYAL COMMISSION ON CO-OPERATIVES\*

**Income Tax on Co-operatives.**—The income tax was introduced into Canada in 1917 as a war measure and has remained ever since. In the original Act the income of mutual corporations, not having share capital, was exempt. In 1919 a ruling was made permitting patronage dividends to be considered as trade discounts deductible before arriving at taxable income. The income tax authorities held that dividends paid to shareholders as interest on capital, are profits and gains, liable to assessment as income of the co-operative society and this view was upheld by the Courts in 1929.

Following this adverse decision, representations were made to the Government asking that the entire surpluses made by co-operatives in trade relations with their members be recognized as savings and not as taxable income or profit. The Income War Tax Act was amended in 1930 by inserting in Section 4, which enumerates various classes of profits that shall not be liable to taxation under the Act, paragraph (p) as follows:—

“The income of farmers', dairymen's, livestockmen's, fruit growers', poultrymen's, fishermen's and other like co-operative companies and associations, whether with or without share capital, organized and operated on a co-operative basis, which organizations

“(a) market the products of the members or shareholders of such co-operative organizations under an obligation to pay to them the proceeds from the sales on the basis of quantity and quality, less necessary expenses and reserves;

“(b) purchase supplies and equipment for the use of such members under an obligation to turn such supplies and equipment over to them at cost, plus necessary expenses and reserves.

“Such companies and associations may market the produce of, or purchase supplies and equipment for non-members of the company or association provided the value thereof does not exceed twenty per centum of the value of produce, supplies or equipment marketed or purchased for the members or shareholders.

“This exemption shall extend to companies and associations owned or controlled by such co-operative companies and associations and organized for the purpose of financing their operations.”

At the time of its enactment, the explanatory paragraphs printed in connection with the Bill and the statements of its sponsors in the House made it clear that it was intended to exempt all co-operatives, of the marketing and consumer type, from liability for income tax. This was found to be quite satisfactory for a time but trouble developed from internal and external causes. The clause itself was not sufficiently explicit and the word “co-operative” was not defined. Co-operatives entered fields of processing and manufacturing that they had not engaged in at the time this exemption was granted, methods of financing were introduced such as revolving funds, federations came into being and subsidiary companies were acquired or formed for purposes other than financing operations. Under these conditions, the Income Tax officials had difficulty interpreting the Act in a satis-

\* Prepared by W. F. Chown, Marketing Service, Economics Division, Department of Agriculture.

factory manner. Then in 1939 war came and immediately following it higher rates of income tax and the enactment of an Excess Profits Tax Act in 1940. Co-operatives became liable for tax if they paid interest on capital, if they processed their products beyond a bare minimum, if they set aside reserves other than for bad debts and depreciation, if they united into federations or if they acquired subsidiaries, and it was alleged that different interpretations were given by different district inspectors. The Wheat Pools were assessed for tax and gave notice of appeal and outside groups were pressing the Government to take action.

The Co-operative Union of Canada urged the Government to clarify its legislation and, following various representations over an extended period, a delegation from the Union met the Minister of Finance in July, 1944. After considerable discussion, proposals were made to the delegates which they felt unable to accept being bound by their original instructions. Meetings were again held early in September with no decision reached.

Later in that month the three Wheat Pools announced a reduction in their handling charges for grains amounting to 2 cents per bushel in the case of street grain, and 1 cent per bushel on consigned grain. The privately owned line elevator companies protested this vigorously claiming such a cut would ruin them.

**The Royal Commission.**—Finally, on Nov. 16, 1944, the Government appointed a Commission under Part 1 of the Inquiries Act to inquire into—

- “(a) the present position of co-operatives in the matter of the application thereto of the Income War Tax Act and the Excess Profits Tax Act, 1940, and
- “(b) the organization and business methods and operations of the said co-operatives as well as any other matters relevant to the question of the application of income and profits tax measures thereto, and
- “(c) the comparative position in relation to taxation under the said Acts of persons engaged in any line of business in direct competition with co-operatives, and report, insofar as the same can conveniently be done, all facts which appear to them to be pertinent for determining what would, in the public interest, constitute a just, fair and equitable basis for the application of the Income War Tax Act and the Excess Profits Tax Act, 1940, to co-operatives and to persons other than co-operatives in respect of methods of doing business analogous to co-operative methods, such as the making of payments commonly called patronage dividends and to make such recommendations for the amendment of existing laws as they consider to be justified in the public interest; . . . ”

Beginning on Jan. 15, 1945, at Vancouver, the Commission conducted enquiries in open court in all the principal cities of Canada and concluded their formal hearings on May 3, at Ottawa. These hearings were publicized in advance and any interested person was invited to make a submission in writing and might appear in person or be represented by counsel to support the views set out. Briefs to the number of 175 were filed by co-operative associations, boards of trade, trade associations, corporations, firms, individuals and public bodies.

In addition to these public hearings, government officials were interviewed, a general questionnaire was sent out to a large number of co-operatives that did not submit briefs and the literature on the subject was reviewed. Accountants and economists were engaged on the technical staff. Three of the Commissioners visited Great Britain and two visited the United States to learn of the co-operative movement in those countries especially with regard to income tax. The Commissioners concluded their work on Sept. 25, but their report of 245 pages was not available until early in December, 1945.

**The Report of the Royal Commission.**—The main report is in three parts as follows: Part I—Trading Associations; Part II—Credit Unions; Part III—Mutual Insurance Organizations. This is followed by five appendices: (a) A statistical study of the relative growth of co-operative business in Canada; (b) Historical sketches of some of the larger and more important co-operatives in Canada; (c) A special study regarding the financing of selected groups of co-operatives in Quebec and Saskatchewan; (d) The taxation of co-operatives in Great Britain and the United States; (e) A history of the credit union movement in Canada.

**PART I.**—Part I of the Report deals with trading associations and is in six sections. The first two sections outline the development and organization of co-operative associations in Canada and present a brief review of the variation in types of organization and methods of financing. One subsection is significantly entitled "Variety and Uniformity".

Section 3 deals with the arguments relating to the taxation of co-operative associations. Representations were heard repeatedly that it was in the public interest to encourage co-operatives by granting them tax exemption. The Commissioners are of the opinion that the granting of fiscal advantage is not usually a good method of giving special encouragement. Exemption granted to one class or segment of the community can hardly benefit the whole. The advantage accrues to all of the class to which it is granted including those who need it and those who do not; the latter generally receive the benefit in greater measure than the former.

It was also represented that there were no profits or income but the Commissioners have come to the conclusion that the associations and their members do receive income. It was represented that ordinary companies were at an unfair advantage because of competition from tax exempt co-operatives. The Commissioners conclude that the chief competitive advantage that the co-operatives enjoy lies in their ability to set aside larger reserves than if they were taxed. However, they did find real fear of what might happen in the future because of these reserves and are of the opinion that it is desirable to remove the cause of these fears.

It was urged upon the Commission that co-operative associations, even though incorporated, were not legal entities separate and apart from their members. The Commissioners did not attempt to assess the advantages or disadvantages of incorporation but are of the opinion that corporate bodies are "persons" separate and distinct from the members associated with them.

In Section 4 are listed eleven proposed solutions that were made to the Commission with brief comment on each.

Section 5 deals with conclusions and recommendations. As already stated, the Commissioners found that income was earned by the association and its members and that the association was a person distinct from its members. From these premises they proceed to determine which items should be taxed as income of the association, which items as income of the members and which items as income of both.

Section 6\* contains a summary of the recommendations of the Commission as follows:—

- “(1) That section 4, paragraph (p), of the Income War Tax Act be repealed.
- “(2) That the Income War Tax Act and the Excess Profits Tax Act be amended to provide for the taxation of co-operative associations and organizations on the same basis as other persons in accordance with the recommendations which follow.
- “(3) That co-operative associations and organizations, joint stock companies, partnerships, and other bodies and persons shall be allowed to deduct, in computing taxable income, such amounts which are paid or credited to their customers, in proportion to the quantity, quality or value of goods acquired, marketed, or sold or services rendered; provided that:
  - (a) Such amounts are paid in cash or its equivalent within six months after the annual meeting of the relevant fiscal period of the association, organization or company and within six months after the end of the relevant fiscal period of other businesses; or alternatively, that they are credited within the same period to each customer and exigible by him on giving such notice as may be deemed reasonable (Appendix D).
  - (b) The statute or statutes under which any such co-operative association or organization is incorporated or registered, or its bylaws, or a contract with its customers, hold forth the prospect that payments will be made in proportion to patronage.
  - (c) The company or other person holds forth the prospect to customers that payments will be made in proportion to patronage.
  - (d) Payments in proportion to patronage shall be at the same rate to all customers with respect to the same type or class of commodities, goods or services, with allowance for differentiation in class, grade or quality where appropriate.
- “(4) That deductions from the gross proceeds of a customer's products be excluded from the income of the association, organization or other business, if applied against an obligation incurred by such customer to purchase shares, or to make other investment in the association; or if credited to the customer, and exigible by him on giving such notice as may be deemed reasonable (Appendix D).
- “(5) That amounts credited in proportion to patronage and deductions from the gross proceeds of sale of the customer's products, which were not deductible for tax purposes when credited or deducted shall, nevertheless, be allowed as a deduction in the period during which they are paid to the customers.
- “(6) (a) That interest, on any form of investment in, or loan to, the association or other taxpayer having a fixed date of maturity, be allowed as a deduction, provided such interest is exigible annually by the claimant or creditor at the rate fixed at the time such investment or loan was made.
  - (b) That interest, on any form of investment or loan which is withdrawable on giving such notice as may be deemed reasonable (Appendix D), be allowed as a deduction if exigible by the claimant or creditor at a rate fixed in advance.
- “(7) That a newly formed association which obtains incorporation or registration under provincial co-operative legislation, or is incorporated as a co-operative under Dominion authority for the purpose of producing and/or marketing natural products of its members or customers and/or of purchasing supplies, equipment, household necessities or services, for its members or customers and which is not owned or controlled, directly or indirectly, by an existing association, or a group of existing associations, shall, with the consent of the Minister, be exempt from income tax for its first three fiscal periods following the commencement of operations. An association claiming such relief should, nevertheless, be required to file annual returns in accordance with Part V of the Income War Tax Act in such form as may be determined by the Minister.
- “(8) That section 4, paragraph (y) of the Income War Tax Act be amended, if necessary, to include associations incorporated or registered under provincial co-operative legislation for providing co-operative housing service.

---

\* In this Section the word “customer” shall be deemed to include shippers and suppliers as well as purchasers where the context requires.

- "(9) That associations incorporated or registered under provincial co-operative legislation, or incorporated as a co-operative under Dominion authority, for the purpose of providing telephone services, distribution of electric power, or medical and hospital services, be exempt from income and excess profits taxes.
- "(10) That the Minister be given power to require all persons to make such annual returns of 'patronage dividends' declared, or 'deductions' made, as may be deemed desirable."

Recommendations 1 and 2 do away with the present provisions regarding the exemption of co-operatives and recommend that they be taxed as other companies. The Co-operative Union suggested that a co-operative be defined. It was expected that the Commission would find a suitable definition. However, they propose that all businesses be treated alike and avoid the extremely difficult problem of determining the degree of co-operation that would qualify for special tax privileges. Patronage bonuses, refunds of excess handling charges, and other similar amounts which are paid or credited to customers in proportion to the quantity, quality or value of goods acquired, or sold, or services rendered are to be deducted in computing taxable income provided certain conditions are complied with. The co-operative or company or firm must hold forth the prospect to customers that payments will be made in proportion to patronage, such payments are to be made at the same rate to all customers and are to be paid in cash or its equivalent within six months of the annual meeting or credited within this period to each customer and withdrawable by him on giving reasonable notice. Application of patronage bonuses on the payment of shares or other investments is deemed to be payment equivalent to cash. Similarly, deductions from the gross proceeds of a customer's products are to be excluded from the taxable income of the association if applied against an obligation to purchase shares or make some other investment or if credited to the customer and withdrawable by him on giving reasonable notice.

Patronage dividends and deductions from gross proceeds credited to customers and *not* withdrawable on notice, will be taxable income in the year earned but may be deducted from taxable income in the year in which they are paid out.

These recommendations will likely lead to some clarification of the equity side of the balance sheet. Hitherto balance sheets have been prepared showing deferred dividends and revolving funds and it has been impossible to determine whether such credits were liabilities or part of the capital and surplus. Amounts that are to be paid out at a fixed date or on demand will go into one category and amounts that may be paid out as, if, and when conditions warrant or the directors decide will go into another category.

With regard to interest the recommendations are that interest on any form of investment in or loan to the association having a fixed date of maturity on which the interest is payable annually at a rate fixed at the time the loan or investment was made be allowed as a deduction. Also, interest on any form of loan or investment withdrawable on notice be allowed provided interest at a rate fixed in advance is payable annually. This leaves as taxable, interest paid at varying rates or only if earned, and interest on investments with no maturity date and not redeemable after notice.

With regard to reasonable notice of withdrawal of patronage dividends at credit or loans to, or investments in the co-operative, one is referred to the practice in Great Britain as set out in Appendix D of the Report. In Great Britain, the bylaws of the societies provide for reasonable notice of large withdrawals and limit the number of shares that may be redeemed to 10 p.c. in any one year. In periods of crisis the directors may temporarily suspend redemption of shares.

PART II.—The income of credit unions is exempt from tax under Section 4, paragraph (q) of the Income War Tax Act. However, there were some tax difficulties because of the organization of federations and because of the fact that, due mainly to investment in Victory Loans, a large part of the income was coming from interest on investments. The deduction of personal income tax at the source, at the rate of 7 p.c. on share dividends, was considered a troublesome nuisance because a large proportion of the members were not liable for tax and the amount deducted had to be claimed from and refunded by the Government.

The Commissioners recommend that the relevant Section be amended to make it clear that the exemption applies to federations and that exempt organizations must derive their revenue primarily from loans to members.

The Commissioners also suggest that the 7 p.c. deduction on dividends be discontinued. Happily, the first peacetime Budget brought down by the Minister of Finance ended deduction at the source on all dividends so that item does not require special legislation.

PART III.—The Commission inquired into the applications of income and excess profit taxes to insurance companies operating on a mutual basis. Their enquiry was limited to the business of fire, casualty and automobile insurance and did not extend to life or marine insurance.

Section 4 of the Income War Tax Act provides that the following shall not be liable to taxation:—

“Mutual Corporations

“(g) the income of mutual corporations not having a capital represented by shares, no part of the income of which insures to the profit of any member thereof, and of life insurance companies except such amount as is credited to the shareholders account.

“Farmers Associations

“(i) the income of such insurance mortgage and loan associations operated entirely for the benefit of farmers as are approved by the Minister.”

As with trading associations, the Commission found a variety of methods in operation such as the premium note plan, the cash premium plan, the deposit plan and the reciprocal exchange plan. In the opinion of the Commissioners the control of a mutual and participation in its surplus, if any, is vested in those who use its services as policyholders and in the case of those operating on the cash premium plan the “dividends” are akin to patronage refund paid by trading associations. However, they found that the mutuals do have income from investments and operating gains which are free from claims of policyholders. They also found that the mutuals specialized in farm and other unprotected rural risks.

Accordingly, the recommendations made are somewhat similar to those made in the case of trading associations, namely, that income be taxed but that before determining taxable income there be deducted dividends and/or refunds of premiums and any unabsorbed premiums or deposits returned to policyholders. Such refunds may be paid in cash, applied on renewal premiums or credited to policyholders in such a way that they may be withdrawn upon demand. In addition, the Commissioners recommend complete exemption in the case of any insurer when more

than half of the net premium income in Canada is derived from the insurance of farm property and other property not protected by municipal or other fire-fighting services, or is derived wholly from the insurance of churches, schools, or other religious, educational and charitable institutions.

### Subsection 2.—Statistics of Co-operation

Tables 20 to 24 include statistics of active co-operative business organizations engaged in marketing produce or buying supplies for their members, but do not include statistics of fishermen's co-operatives or service co-operatives.

#### 20.—Summary Statistics of Co-operative Business Organizations in Canada, Years Ended July 31, 1933-44

Year	Asso- ciations	Places of Business	Share- holders or Members	Patrons	Sales of Farm Products	Sales of Supplies	Total Business <sup>1</sup>

## PART III.—COMMERCIAL FAILURES

According to Sect. 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was actually passed by the Dominion Parliament in 1869, applying to the four original provinces. This Act was renewed by c. 46 of the Statutes of 1874. In 1875 a new Insolvency Act (38 Vict., c. 16) applicable to the whole Dominion was passed, but was repealed in 1880. After this there was no Dominion legislation on the subject of bankruptcy until 1919. During the interval of nearly 40 years, commercial failures were handled under provincial legislation, and the statistics relating to such failures during this period were compiled and published by two commercial agencies, R. G. Dun and Co., and the Bradstreet Co. Statistics of commercial failures dealt with under the Dominion Bankruptcy Act of 1919 have been compiled and published by the Dominion Bureau of Statistics since 1920. (See pp. 630-632.)

The three Sections of this Part, although closely related so far as subject matter is concerned, cover different aspects of the field and the statistics presented in each Section are not comparable.

Statistics of industrial and commercial failures in Canada, given in Section 1, are compiled by Dun and Bradstreet, Inc. This concern is a mercantile agency interested primarily in credit information, and it is not to be expected that their data would be compiled on the same basis as figures of the Dominion Bureau of Statistics or the Superintendent of Bankruptcy. These statistics are established on a broader basis than those of Section 2, inasmuch as they include bankruptcies in general, insolvencies under provincial companies' Acts and such proceedings as bulk sales, bailiffs' sales, landlords' seizures, etc., when loss to creditors results. On the other hand, the statistics do not include assignments of farmers (under the Farmers' Creditors Arrangement Act) or of wage-earners, so that, as a general rule, the totals run lower than those in Section 2. As pointed out, between 1875 and 1919 the agencies, now Dun and Bradstreet, Inc., were the only source of figures of commercial failures, and their statistics have an added value because they present an unbroken historical series, though not on a comparable basis since 1934 (see text preceding Table 1). Dun and Bradstreet, Inc., have ceased to publish statistics of assets since 1940.

Section 2, on the other hand, is limited to bankruptcies and insolvencies made under Dominion legislation, such as the Bankruptcy Act (including the Farmers' Creditors Arrangement Act), the Winding Up Act and the Companies' Creditors Arrangement Act, but not failures, sales, or seizures carried out apart from such Dominion legislation. In the field covered, however, Section 2 is broader than Section 1, inasmuch as the Dominion Bureau of Statistics figures include failures of individuals such as wage-earners and farmers.

A word should be added as regards the value to be placed upon figures of assets and liabilities. Such values are estimates made by the debtor and, unfortunately, are not made uniformly. The human equation enters into them to a considerable degree and they must be accepted with this qualification.

Section 3 is limited to the administration of bankrupt estates by the Superintendent of Bankruptcy, under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can, therefore, be assumed that this applies in even greater degree to the extended fields covered in Sections 1 and 2.

### **Section 1.—Industrial and Commercial Failures from Private Sources**

A historical table giving failures for Canada and Newfoundland, by classes, for the years 1915 to 1935 is given at p. 969 of the 1936 Year Book. Early in 1936, Dun and Bradstreet, Incorporated, from whose reports these figures were taken, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises previously included in manufacturing and a new class for commercial service. Real estate companies, holding, and other financial companies and agents of various kinds, were dropped. These changes

have had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities are reduced more in proportion to the number of failures since the companies eliminated usually ran high in indebtedness.

### 1.—Industrial and Commercial Failures in Canada, by Classes, 1934-44, and by Provinces, 1945

British Columbia.....	8	6	3	352	122	67
Totals.....	186	96	95	3,634	2,119	2,305

According to Dun and Bradstreet, Incorporated, the number of commercial failures during the war years 1939-45 showed a steady decrease year by year, and whereas before the War the great majority of failures were in retail trading establishments, the proportion in that group also showed a steady decrease during the past six years. In 1939, out of a total of 1,299 failures, 874 or 67 p.c. were in retail trade, while in 1945 of the 95 failures, 26 or 27 p.c. were in retail trade.

## Section 2.—Commercial Failures as Compiled by the Dominion Bureau of Statistics

Under the Bankruptcy and Winding Up Acts (R.S.C. 1927, cc. 11 and 213) certain documents relating to estates administered under these Acts have, since July, 1920, been forwarded to the Dominion Statistician for statistical analysis. However, changes in the Acts effective in 1923 affected the comparability with 1921 and 1922, the two earliest full years for which statistics are compiled. The series, therefore, begin with 1923, except for the analysis by branches of business, in which case 1924 is the first year compiled. The statistics of this Section cover all bankruptcies and insolvencies that fall under Dominion legislation, including assignments of individuals and farmers.

**Section 3.—Administration of Bankrupt Estates**

The administration of bankrupt estates is supervised by the Superintendent of Bankruptcy (appointed in 1932) with the object of conserving so far as possible the assets of bankrupt estates for the benefit of the creditors. Figures from the first report are given at p. 1039 of the 1934-35 Year Book, and those for subsequent years are to be found in later editions.

**8.—Assets, Liabilities, Assets Realized and Costs of Administration in Bankrupt  
Estates Closed, 1933-44, and by Provinces, 1945**

<sup>1</sup> In addition to the payments by the trustee, secured creditors valued their security or realized on it themselves without the intervention of the trustee to an amount of approximately \$2,596,063 in 1942, \$1,799,722 in 1943, \$1,201,289 in 1944 and \$1,811,803 in 1945. <sup>2</sup> Included in the provincial totals.

The Farmers' Creditors Arrangement Act came into effect Sept. 1, 1934. Assignments are made only in those cases in which the farmers are hopelessly insolvent and, in many cases, the assignments follow the rejection of proposals submitted to the creditors. Receiving orders are made only in cases in which the farmers have failed to fulfil the terms of their proposals as accepted by the creditors and approved by the court. Table 9 shows only statistics of estates closed by assignments or receiving orders and does not indicate the proposals that have been approved and are being carried out under the Farmers' Creditors Arrangement Act.

### 9.—Assets, Liabilities, Assets Realized and Costs of Administration in Estates Closed by Assignments or Receiving Orders Under the Farmers' Creditors Arrangement Act, 1935-44, and by Provinces, 1945.

Canada, nearly 4,000 miles in length from east to west, with the main topographic barriers running in a north-south direction, and a relatively small population of 12,119,000 (1945 estimate) thinly distributed along the southern strip of this vast area, presents unusual difficulties from the standpoint of transportation. Different parts of the country are shut off from each other by areas of rough, rocky forest terrain, such as the region lying between New Brunswick and Quebec, the areas north of Lakes Huron and Superior, dividing the industrial region of Ontario and Quebec from the agricultural areas of the prairies, and the barriers interposed by the mountains of British Columbia. To such a country with a population so distributed and producing mainly for export, as do western agriculturists or, like manufacturers, largely for consumption in distant portions of the country itself cheap transportation is a necessity of life.

In order to appraise the value of each of the agencies of transportation, this Chapter of the Year Book, after treating of Government control over agencies of transportation and communication in Part I, deals with the four main agencies, namely, carriers by rail, road, water and air, in Parts II, III, IV and V, respectively. In each Part the arrangement is intended to show: (1) the plant, equipment and facilities available; (2) the cost to the Canadian people; and (3) the traffic carried or services performed, in so far as statistics are available for each agency.

Scarcely less important, from the social and economic viewpoints, is the development of communications in a country so vast and with population centres so scattered. The Post Office has been a great though little recognized factor in promoting solidarity among the people of different parts of the Dominion, and this same desirable object is now being further aided by radio, while telegraphs and telephones have done much to annihilate distance—the rural telephone, in particular, having been of great social and economic benefit in country districts. The press, assisted by cheap telegraph and cable rates, and by low second-class mail rates to all parts of the country, has been helpful in developing national sentiment. These means of communication are dealt with in Parts VI, VII, VIII and IX.

## **PART I.—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION**

### **Section 1.—Government Control Over Agencies of Transportation\***

#### **Subsection 1.—Permanent Controls**

With the modern development of new forms of transportation, it is becoming increasingly important to realize that the several agencies of transportation—carriers by rail, road, water and air—are, or should be, inter-related parts of an integral whole where each agency has its place in the efficient provision of necessary transportation in Canada. The Dominion Department of Transport was organized on Nov. 2, 1936, under authority of c. 34 of the Statutes of 1936, to unify in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation and radio.

The business of transportation and communications is, generally speaking, a 'natural monopoly', i.e., a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. For this reason there has been a strong tendency toward consolidation and amalgamation over the past half century. The outstanding example of these consolidations in Canada in recent years is the concentration of control of the railways of the country in the hands of the Canadian Pacific Railway Company and the Canadian National Railways.

Such control inevitably brings with it elements of monopoly and possible overcharge, and it has been deemed advisable in Canada, as in other countries, to set up authorities to control the rates to be charged and the other conditions under which services to the public are to be rendered by common carriers. This control, so far as the railways within the jurisdiction of the Dominion Government are concerned,

This material has been compiled in co-operation with the Board of Transport Commissioners, the Department of Transport, the Canadian Shipping Board, and from reports published by the Department of Munitions and Supply. The data have been brought up to 1946.

is now in the hands of the Board of Transport Commissioners. From time to time the regulatory authority of the Commission has been extended to a limited extent to other utilities (see below).

Besides the Board of Transport Commissioners, there exist, in several of the provinces, bodies that undertake among their duties the supervision and control of local public utilities operating under the jurisdiction of the provinces, and the regulation of their rates for service. Among these are the Ontario Department of Municipal Affairs (formerly the Railway and Municipal Board of Ontario, established in 1906), the Quebec Commission of Public Utilities established in 1909, the Nova Scotia Board of Commissioners of Public Utilities and the Public Utilities Commission of Manitoba. In the three most westerly provinces these same duties are performed by provincial Departments of Railways.

**The Board of Transport Commissioners for Canada.**—Introductory paragraphs explaining the situation that led to the introduction of railway regulation by commission in Canada, as well as other information relating to the organization of the Board, procedure, judgments, etc., are given at pp. 633-634 of the 1940 Year Book.

*Powers of the Board.*—With regard to transport by rail, these cover matters relating to the location, construction and operation of railways. The most important of these powers has to do with rate regulation. Passenger rates are divided into standard and special; freight rates into standard, special and competitive. Standard rates are maximum rates and the only ones that must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval, provided that a change of rates has been advertised. But important rate adjustments usually come to the notice of the Commission, for a changed rate alters the extent of the territory in which a shipper can compete and on this account he is likely to appeal the case to the Commission.

By an amendment to the Railway Act, the regulation of telephone, telegraph and express rates was given to the Commission, but with narrower powers than were given to it in dealing with railways. By the Transport Act, 1938, as amended by 8 Geo. VI, c. 25, 1944, and by an Act passed during the first session, twentieth Parliament, 9 Geo. VI, c. 32, 1945, and since Jan. 15, 1939, following a proclamation of the Governor in Council to that effect, the Board has power to issue licences to ships engaged in the transportation of passengers or goods on the Great Lakes and the Mackenzie River, as defined in Sect. 2, Subsection 1 (f) and (hh) of the Transport Act, 1938. The Board is required to perform the functions vested in it under the Transport Act and the Railway Act with the object of co-ordinating and harmonizing the operations of all carriers engaged in transport by railways and ships. The Board may require every applicant for a licence under the Transport Act to establish public convenience and necessity to its satisfaction and take into consideration the financial responsibility of a licensee or applicant. The Board may, in the licence, state the ports between which the ships named therein may carry goods or passengers and the schedule of services which shall be maintained; every standard tariff and every amendment and supplement thereto shall require the approval of the Board before it becomes effective.

**Air Transport Board.**—The responsibilities of the Board of Transport Commissioners relating to the control of civil aviation were transferred to the Air Transport Board, established under 6 Geo. VI, c. 28, 1944, an amendment to the Aero-

nautics Act, which was proclaimed in effect as from Oct. 31, 1944. The Board is to advise the Minister on civil aviation to license all forms of commercial air transport on the basis of public convenience and necessity, and to exercise economic control in the matter of financial responsibility, schedules, rates and charges, insurance and other matters. The organization of the Board comprises the Secretary's Branch, which includes the Administrative and Licensing Divisions, and the Economics, Traffic and Research Aeronautical Engineering Branches.

Under the amended Act all commercial air transport flying must be licensed, whereas previously only scheduled services required licensing. Also an operating certificate, issued by the Minister of Transport, must be held by the operator of a carrier certifying that the necessary air navigational aids and ground facilities have been established and that the operator is adequately equipped to operate a safe service.

In preparation for the task laid upon it by the Act to review all licences respecting commercial air services issued under the Transport Act, 1938, the Board, in collaboration with the Department of Reconstruction and Supply, executed a Dominion-wide traffic pattern survey, the results of which will be made available to the public through the King's Printer. During 1945, the Board became fully operative and co-operated with the Department of Transport in bringing existing operations into line with the new legislation and in authorizing the inauguration of a number of new services which made their appearance after the cessation of hostilities.

Resulting from the experience of the Board in dealing with the applications put before it, additional amendments to the Aeronautics Act were passed under 9-10 Geo. VI, c. 9, assented to Dec. 15, 1945, which further determined the rights and duties of the Board.

### **Subsection 2.—Wartime Controls**

The extensive transportation systems of Canada were, in peacetime, capable of handling a much greater volume of traffic than conditions required. However, after the outbreak of war in 1939, the vastly increased movements of raw materials to the factories, and of munitions, troops, etc., to the theatres of war, placed a heavy burden on existing transportation facilities. Early in the War, the Government took steps to ensure that the vital transportation requirements of the war effort would be met and many important measures were put into effect. The chief agencies of transportation control were the Canadian Shipping Board; the Controllers of Ship Repairs; Transport and Transit; the Administrator of the Wartime Prices and Trade Board and the Director of Merchant Seamen. The Ship Repairs Control and the Transit Control were dissolved on Dec. 1, 1945.

### **Control of Interior Transportation**

**Transport.**—A Transport Controller, responsible to the Minister of Transport, was appointed in November, 1939, to facilitate the orderly and expeditious transit of war materials, troops, etc., and to prevent congestion at freight terminals and at the seaboard. The Transport Controller had from time to time *ex officio* membership on the Canadian Shipping Board, the United Kingdom Ministry of War Transport, the Shipping Priorities Committee, Wartime Industries Control Board, Fairmont Co. Ltd., (the Crown Company dealing in rubber for wartime industries)

and of various committees dealing with the movement of essential and critical materials, and acted as Transport Adviser to the various Government Departments, including Munitions and Supply, National Defence, Transport, Agriculture, etc.

The Transport Controller exercised control of goods, including civilian and defence materials moving between points in Canada and to the various ports for export, also supervised the movement of civilian passengers and military, naval and air force personnel.

Since V-J Day, Aug. 14, 1945, relaxation of Transport Control Orders and transfer of Transport Control traffic responsibilities have been under way in an orderly manner. Canadian Government Departments or agencies, and Allied missions, etc., which have established traffic departments, are now responsible for their own railway and ocean freight traffic problems respecting shipments for overseas.

It has also been possible to revoke Transport Control orders affecting railway passenger traffic, and the railways in Canada were thereby empowered to remove restrictions, established during the war period, curtailing civilian passenger travel in order to conserve railway equipment, motive power and fuel, and to ensure maximum use of railway facilities for the prompt and continuous movement of essential traffic.

Transport Control freight orders governing maximum carloading, and fruit and vegetable regulations affecting refrigerator cars, are still in effect, because of the heavy volume of freight traffic moving and the short supply of railway equipment both in Canada and the United States.

**Civil Transit of Passengers.**—Local transportation facilities, such as buses, street cars and taxicabs were required to handle record traffic during the war period 1939-45. Faced with an emergency situation, the Department of Munitions and Supply appointed a Transit Controller in August, 1941. The Controller placed the transit facilities under strict regulation, and took supplementary measures such as the staggering of hours of work. Under what was known as the Wartime Industrial Transit Plan, special gasoline and tire privileges were given to those who transported fellow employees to and from work.

In July, 1944, the 50-mile limit, previously imposed on inter-urban bus operation, was removed and, with the end of the War in Europe in May, 1945, all restrictions of the Transit Controller on the schedules and routes of bus operations were cancelled. Coincident with the abolition of gasoline rationing, after the end of hostilities in the Pacific in August, 1945, all remaining Transit Control restrictions on the operation of taxicabs, buses and drive-yourself cars were revoked. The Wartime Industrial Transit Plan also went out of operation immediately thereafter, and Transit Control Regulations calling for the staggering of daily working hours were rescinded.

**Truck Control.**—Within recent years the development of commercial-truck transport has been of great importance, both for local and for inter-urban transportation of goods. During the war years 1939-45, manufacture of new trucks was cut off and the use of tires and gasoline restricted. These factors, taken together with the increased traffic produced by the War and the fact that other transportation agencies such as the railroads were also over-loaded, made it necessary to introduce controls over trucking.

To conserve trucks, gasoline and rubber, jurisdiction over truck transport was first lodged with the Administrator of Services of the Wartime Prices and Trade Board who, early in 1942, was given power to regulate and control transportation of goods by vehicle, rates to be charged, routes to be followed, loads to be carried, empty or dead running time and the kinds of goods that might be transported, as well as to direct or arrange for the pooling of facilities. Immediately thereafter, orders were issued by the Wartime Prices and Trade Board restricting retail and wholesale deliveries generally and deliveries by various specialized types of operators such as laundries, ice, bread, milk and cream pick-up, construction supplies, etc. In July, 1942, it was ordered that no private commercial vehicle, with specified exceptions, could be operated more than 35 road miles from its normal home station except under permit.

In September, 1944, control over certain truck deliveries was transferred to the Transit Controller, Department of Munitions and Supply, in a move towards centralizing, under the same authority, the control over motor-vehicle transportation of both passengers and goods. Transit Control, in co-operation with Oil Control, fixed gasoline and mileage ceilings for all trucking categories, and investigated and reported to Motor Vehicle Control on applications for new trucks, trailers, buses, passenger cars and all other motor-vehicle equipment.

The 35-mile limit on the operation of trucks was removed shortly after V-J Day, August, 1945, as were the Transit Control Regulations requiring a permit for milk and cream collections, and various Wartime Prices and Trade Board orders restricting wholesale and retail deliveries, pick-ups and deliveries by laundries and dry-cleaners and the use of vehicles by theatres for advertising purposes. With the end of gasoline rationing in August, 1945, all gasoline and mileage ceilings were removed.

### Control of Shipping

**The Canadian Shipping Board.**—The Canadian Shipping Board was established in December, 1939, as an autonomous wartime body reporting to the Government through the Minister of Trade and Commerce. The former Ship Licensing Board, which had been set up on Sept. 5, 1939, was incorporated in it as the Ship Licensing Committee. In March, 1945, the headquarters of the Board were transferred from Ottawa to Montreal.

The Board consists of the Chairman, the Director of Shipping, the Transport Controller, and senior representatives of the Royal Canadian Navy and the Departments of External Affairs, National Revenue, Trade and Commerce and Transport. The day-to-day operations of the Board are conducted by its Chairman, the Director of Shipping and Technical Advisers, most of whom are executives drawn from private shipping companies, serving for a nominal salary of one dollar per year. Representatives of the Board are stationed at London, England, and Washington, D.C., enabling the Board to maintain a close liaison with the United Kingdom Ministry of Transport and the United States Maritime Commission and War Shipping Administration. Representatives are also posted at Halifax, N.S., and Saint John, N.B., to assist in local shipping matters at these ports.

The principal functions of the Board, since its establishment in 1939, have been the control and direction of all Canadian ocean, coastal and inland waters shipping in order to see that it is used to maximum efficiency; advising the Government on matters relating to water transport; maintaining essential sea and inland waters commerce; and administration of its own regulations governing Canadian vessels.

The termination of hostilities in 1945 made it possible to employ a much greater volume of shipping to carry relief and rehabilitation shipments to liberated areas. The United Maritime Authority "Agreement on Principles", which had been signed in 1944 by most Allied Nations, including Canada, became effective on May 24, 1945, and provided a system of international control and allocation of shipping which ensured the carriage of war materials and essential civilian supplies. Before the expiration of that Agreement on Mar. 2, 1946, a new arrangement was agreed upon by the various contracting governments in order to continue, during the transitional period ending on Oct. 31, 1946, the international controls necessary to maintain the prompt and orderly movement of the supplies programmed for shipment to devastated areas. Shipping contributed for relief and rehabilitation programs by member governments is allocated by the Contributory Nations Committee in Washington and by a Canadian sub-committee in Montreal. A United Maritime Consultative Council was also set up as a forum for consideration of international shipping problems; the Council has no executive powers and is scheduled to terminate on Oct. 31, 1946.

The end of the War and the simplification of international control made it possible for the Board to relax its controls over Canadian shipping. In April, 1946, the Board revoked its ship licensing and charter controls over all coastal and inland navigation vessels; these controls were continued, however, for foreign-going vessels of 500 tons or over gross register, to enable the Board to meet the obligations which Canada has assumed under the new arrangement for international shipping control during the transitional period ending on Oct. 31, 1946.

**Ship Repairs and Salvage Control.**—The Controller of Ship Repairs and Salvage of the Munitions and Supply Department, operating with the United Kingdom Ministry of War Transport, ship owners, ship agents, shipyards, drydock operators, and other similar agencies, worked to ensure quick action in the event of repairs being required in Canadian ports. Control operations extended also to the salvage of sunken vessels and their cargoes.

At the close of the War in Europe, in May, 1945, the convoying of merchant ships from the maritime ports ceased. This permitted better regulations of work on vessels which were arriving more regularly and in smaller numbers. During August, 1945, the Control gradually dropped out of the regulations of drydock and other services, as congestion at shipyards lessened. By the end of September, 1945, all controls on ship repairs had been lifted, and ship salvage operations were being carried on as in peacetime.

The Ship Repairs and Salvage Control ceased to function at the end of October, and was formally disbanded Dec. 1, 1945.

## Section 2.—Government Control Over Agencies of Communication\*

The development and control of radio-communication in Canada from the beginning of the century is outlined at pp. 644-646 of the 1945 Year Book.

The present phase of national radio broadcasting in Canada was entered upon in 1936, when, with the passage of the Canadian Broadcasting Act, 1936, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission (see pp. 717-720). The new Act gave the Corporation much wider powers in the operation of the system, and was modelled very largely along the lines of the Act

\* Prepared in co-operation with the Department of Transport.

governing the British Broadcasting Corporation. The technical control of all broadcasting stations reverted to the Minister of Transport, who was also empowered to make regulations for the control of any equipment liable to cause interference with radio reception.

However, pursuant to the provisions of the Public Service Rearrangement and Transfer of Duties Act and of the War Measures Act, the duties, powers and functions vested in the Minister of Transport under the Radio Act, 1938, and the Canadian Broadcasting Act, 1936, were transferred to the Minister of Munitions and Supply by Orders in Council passed in July and September, 1940. An Order in Council, passed in June, 1941, transferred jurisdiction over the broadcasting activities of the Canadian Broadcasting Corporation to the Minister of National War Services. Further Orders in Council in October and November, 1944, transferred the duties, powers and functions in respect to radio, previously vested in the Minister of Munitions and Supply, to the Minister of Reconstruction.

In addition to being subject to the provisions of the Radio Act, 1938, and of the regulations issued thereunder, the administration of radio in Canada, including broadcasting, is subject to the International Telecommunication Convention (Madrid, 1932) and the Radio-communication Regulations annexed thereto (Revision of Cairo, 1938) as well as to regional agreements such as the Inter-American Radio-communications Convention, the North American Regional Broadcasting Agreements, Havana, 1937, and the Inter-American Arrangement respecting Radio-communications, including the revision thereto, of Santiago de Chile, January, 1940.

## PART II.—RAILWAYS

The treatment of rail transportation is divided into three sections dealing, respectively, with steam railways, electric railways and express companies.

### Section 1.—Steam Railways\*

The steam railway is the most important transportation agency from the standpoint of investment and of traffic handled and the statistical field is more completely covered for this form of transportation than for any other.

**Historical.**—A brief historical sketch of the development of steam railways in Canada is given at pp. 635-638 of the 1940 Year Book. Further details are given at pp. 616-623 of the 1922-23 Year Book, at pp. 601-603 of the 1926 Year Book and at pp. 694-698 of the 1934-35 Year Book. An article at pp. 648-651 of the 1945 edition deals with the wartime role of the steam railways of Canada.

#### Subsection 1.—Mileage and Equipment of Steam Railways

Although construction was begun in 1835 on the first railway in Canada—the short link of 16 miles between Laprairie and St. Johns, Que.—there were only 66 miles of railway in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and Great Western railways, as well as numerous smaller lines, were built. The building of the Intercolonial and the Canadian Pacific railways contributed to another period of rapid expansion in the

\* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch, Dominion Bureau of Statistics. This Branch publishes an annual report on "Steam Railway Statistics", as well as numerous other reports, a list of which is given in Chapter XXXII of this volume. Certain of the financial statistics of steam railways are compiled in co-operation with the Department of Transport.

1870's and 1880's. In the last period of extensive railway building from 1900 to 1917, the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

During the past decade, there has been a tendency for railway mileages to decline slightly because of the abandonment of unprofitable lines. Of the 42,336 miles of single track operated in 1944, 23,496 were part of the Canadian National System.

### 1.—Record of Steam-Railway Mileage

NOTE.—Corresponding figures of total mileage of single track for the years 1835 to 1899 are given at p. 546 of the 1941 Year Book.

<sup>1</sup> Includes Pullman Co. cars in Canadian service.<sup>2</sup> Includes 3 auto-railers.<sup>3</sup> Includes 1 auto-railer.

## Subsection 2.—Finances of Steam Railways

The tables in this Subsection deal with capital liability, capital invested, earnings, operating expenses, employees and their earnings and Government aid to steam railways. However, the presentation of the financial statistics of railways in Canada would not be complete without some detailed consideration of the finances of the Government-owned railways. This is given in the latter part of the Subsection. Further statistics of revenue are included in Table 13, where they are shown in relation to traffic. Statistics of individual railways, covering single-track mileage, capital, earnings and operating expenses, may be found in the "Annual Report of Railway Statistics", published by the Bureau of Statistics.

**Capital Liability.**—The great increase after 1922 in the capital liability of the steam railways of Canada is due to the inclusion of all Government loans to railways and investment in road and equipment of Government railways as part of the capital liability of the railways. The reduction after 1937, brought about by the Canadian National Capital Revision Act (c. 22, 1937), is explained at p. 644 of the 1939 Year Book.

3.—Capital Liability<sup>1</sup> of Steam Railways, 1926-44

NOTE.—Figures for the years 1876 to 1925, inclusive, are given at p. 649 of the 1927-28 Year Book.

Year	Stocks	Funded Debt	Total	Year	Stocks	Funded Debt	Total
	\$	\$	\$		\$	\$	\$
1926....	1,361,758,426	2,144,999,621	3,506,758,047	1936....	1,425,193,791	3,062,411,720	4,487,605,511

<sup>1</sup> Does not include Canadian railway capital owned by Canadian railways.

**Capital Investment.**—The capital structure of the Canadian National Railways, changed by the Capital Revision Act, 1937, was reduced by \$262,770,972 (see p. 644 of the 1939 Year Book). The excess of capital liability as shown in Table 3 over the investments in road and equipment shown in Table 4 is accounted for by loans and advances from the Government to cover deficits of the Canadian National Railways and by the fact that some railway stock issues represented little actual investment in physical property. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property to other Government Departments, etc.

<sup>1</sup> Details of this item are given in the annual report on "Steam Railway Statistics" issued by the Transportation and Public Utilities Branch of the Bureau of Statistics.

<sup>2</sup> Includes \$74,728,521 transferred to depreciation reserve and a credit of \$34,534,220 transferred to premium on capital and debenture stocks.

**Earnings and Expenses.**—The operating ratio, or ratio of expenses to revenues, of Canadian railways increased from around 70 p.c. to above 90 p.c. between 1917-20, and remained high thereafter. The United States Government took over the operation of the United States railways and increased the rates of pay of the railway employees when that country entered the War of 1914-18. The Canadian railways were also obliged to make corresponding increases and these have been the chief factor in increased operating ratio. Declining revenues without corresponding reductions in expenses during the depression period also maintained the high ratio. The period after 1938 showed a sharp decline in this ratio, due primarily to the greatly increased freight traffic occasioned by the War of 1939-45 and a subsequent acceleration in gross earnings.

## GROSS EARNINGS AND OPERATING EXPENSES OF STEAM RAILWAYS

1914-1944

## 5.—Earnings and Operating Expenses of Steam Railways, 1936-44

NOTE.—Gross earnings and operating expenses for the years 1875 to 1914 are given at p. 434 of the 1916-17 Year Book. The analyses per mile of line and per train mile go back to 1908 only and are given for 1908 to 1916 at p. 435 of the 1916-17 Year Book. Corresponding figures for the years 1915 to 1925 are given at p. 550 of the 1941 Year Book and for 1926 to 1935 at p. 585 of the 1942 Year Book.

**Railway Salaries and Wages.**—The number of railway employees fluctuates with the volume of traffic, but not to the same extent. Salaries and wages are affected by the number of employees, by rates of pay and by the time worked. Since 1939 the influence of the War has resulted in a sharp upward swing in both the number of employees and the average earnings.

## 7.—Steam Railway Employment and Salaries and Wages, 1936-44

NOTE.—Corresponding figures for the years 1912 to 1935 are given at p. 551 of the 1941 Year Book.

Year	Employees	Total Salaries and Wages	Average Salaries and Wages	Ratio of Operating Salaries and Wages to—	
				Gross Earnings	Operating Expenses
	No.	\$	\$	p.c.	p.c.
1936.....	132,781	182,638,365	1,375	49.9	59.0
1937.....	133,753	193,557,663	1,447	49.8	58.8
1938.....	127,747	195,108,351	1,531	52.8	60.2

1944 <sup>1</sup> .....	175,095	372,064,613 <sup>2</sup>	2,125	42.9	53.8

<sup>1</sup> Includes employees and wages for "outside operations" amounting to about 3 p.c. of total employees and 2.3 p.c. of total salaries and wages.

<sup>2</sup> Includes approximately \$10,000,000, wages earned in 1943.

**Government Aid to Railways.**—In order that the private railways of Canada might be constructed in advance of settlement, as colonization roads, or through thinly settled districts where little traffic was available, it was necessary for Dominion and Provincial Governments and even for municipalities to extend some form of assistance. The form of aid was generally a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land other than for right-of-way were also made.

As the country developed, the objections to the land-grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that system, except those for rolling-stock, have been guaranteed by the Dominion Government. No new land grants or cash subsidies have been advanced by either the Dominion or Provincial Governments since 1939 and the situation, as it existed at Dec. 31, 1940, is set out at pp. 587-588 of the 1942 Year Book.

During the era of railway expansion before the War of 1914-18, Provincial Governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railways. As these bonds mature they are paid off by the Canadian National Railways in large measure through funds raised by the issue of new bonds with Dominion Government guarantee. In this manner bonds guaranteed by the Governments of Ontario, Manitoba, Saskatchewan and Alberta have been eliminated in recent years.

**8.—Railway Bonds Guaranteed by Dominion and Provincial Governments, as at Dec. 31, 1944**

Government	Canadian National	Other Railways	Total
	\$	\$	\$
Provincial Governments—			
New Brunswick.....	622,658	465,000	1,087,658
British Columbia.....	2,079,497	Nil	2,079,497
Totals, Provincial Governments.....	2,702,155	465,000	3,167,155
Dominion Government.....	567,904,473 <sup>1</sup>	Nil	567,904,473
<b>Grand Totals.....</b>	<b>570,606,628<sup>1</sup></b>	<b>465,000</b>	<b>571,071,628</b>

<sup>1</sup> Does not include \$8,680,854 perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National System, on which interest and dividends are guaranteed by the Dominion Government.

### Financial Statistics of Government-Owned Railways

A description of the origin and growth of Government-owned railways in Canada is given at pp. 601-603 of the 1926 Year Book. That article describes their consolidation under the Canadian National Railways in 1923. The Hudson Bay Railway is a direct liability of the Dominion Government and has been operated by the Canadian National for the Government since Apr. 1, 1935, but is not included in the data for Canadian National Railways. To Mar. 31, 1945, the total cost of this railway was \$33,602,517, exclusive of the expenditure of \$6,274,113 on the terminal at Nelson and a loss of \$3,150,498 on operation. The operating deficit for the fiscal year 1944-45 was \$564,940.

The major portion of Dominion Government investments in railways consists of construction costs of the Intercolonial System, the National Transcontinental Railway and the Hudson Bay Railway, and the purchase price of small railways in the Eastern Provinces. The terminals at Churchill consisting of a grain elevator, a warehouse and docks have been transferred to the National Harbours Board and the investment removed from the railway account. Loans and advances to the Canadian National Railways for payment of operating deficits were charged to the Consolidated Revenue Account of the Dominion and also cleared from the railway account and other adjustments were made under the Canadian National Railways Capital Revision Act, 1937.

The Canadian National Railways Capital Revision Act (c. 22 of the Statutes of 1937) is dealt with at p. 644 of the 1939 Year Book. In the same edition, a table at pp. 644-645 shows a condensed consolidated balance sheet as at Dec. 31, 1936, adjustments authorized by the Capital Revision Act and the revised balance sheet as at Jan. 1, 1937.

**Operating Finances of the Canadian National Railways.\*** —Gross revenues, operating expenses and net revenues include only those from steam railway and commercial telegraph operations, but the deficits are for the entire system, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Under the Canadian National Railways Capital Revision Act (c. 22, 1937), interest on Dominion Government loans, amounting to \$530,832,598, and Government claims for interest, amounting to \$43,949,039, were cancelled as liabilities of the Railway and these have been eliminated from Table 10 as fixed charges. Also loans of \$270,037,438 for capital and \$373,823,120 for deficits were cancelled.

\* For detailed statistics of the operation and finances of the Canadian National Railways see the annual reports on "Steam Railway Statistics" and "Canadian National Railways" published by the Dominion Bureau of Statistics.

### 10.—Gross Revenues, Operating Expenses, Net Revenues, Fixed Charges and Deficits of the Canadian National Railways,<sup>1</sup> 1936-44

NOTE.—Appropriations, etc., for the Hudson Bay Railway are not included with these data; although the Railway was returned to the Government while under construction, it is not now a part of the Canadian National Railways. For figures for the years 1911-25, see p. 660 of the 1936 Year Book and for 1926-35, see p. 590 of the 1942 Year Book.

<sup>1</sup> Includes the Central Vermont Railway, Inc.

<sup>2</sup> Net income deficit includes appropriations for insurance fund and excludes interest on Government loans eliminated by the Capital Revision Act, 1937.

<sup>3</sup> Contributed by Dominion Government.

**Capital Structure and Debt of Canadian National Railways.**—The share capital on Dec. 31, 1922, consisted of \$165,627,739 stock of the Grand Trunk Railway held by the Dominion Government and \$100,000,600 of the Canadian Northern Railway stock also held by the Dominion Government. There was also outstanding \$4,591,975 stock of constituent lines held by the public. Table 11 shows the capital liabilities of the Canadian National Railways other than shareholders' capital. The amounts shown under "Active Assets" represent largely temporary loans and explain the large increases during the war years.

### 11.—Debt of the Canadian National Railways, as at Dec. 31, 1937-44

NOTE.—Figures for the years 1922-36 are given at p. 591 of the 1942 Year Book.

**Subsection 3.—Steam Railway Traffic**

**Passenger and Freight Traffic.**—Table 13 shows the passenger and freight statistics for all steam railways for the years 1936-44. A separate analysis is given in Table 14 of the operations and traffic of the Canadian National Railways, since, being controlled by the Dominion Government, the information is considered of special interest.

**13.—Statistics of Passenger and Freight Services and Revenue Receipts, 1936-44**

NOTE.—Corresponding figures for 1910-15 are given at pp. 628-629 of the 1922-23 Year Book, for 1916-30 at pp. 652-653 of the 1937 Year Book and for 1931-35 at pp. 592-593 of the 1942 Year Book.

<sup>1</sup> Includes express, baggage, mail, etc., cars.<sup>2</sup> Duplications included.<sup>3</sup> Includes caboose

miles and excludes miles made in passenger and non-revenue trains.

<sup>4</sup> Duplications eliminated, see

Table 15 for details of freight carried.

*Mileage and Traffic of the Canadian National Railways.*—At Dec. 31, 1944, steam railway track mileage of the C.N.R. (including lines in the U.S.A. but exclusive of the Northern Alberta Railways and Toronto Terminals Railway, which are controlled jointly by the Canadian National and the Canadian Pacific Railways) was 23,562. Including the Thousand Islands Railway, 4.51 miles, and the Muskegon Railway and Navigation Co., 5.25 miles, controlled but separately operated, the total steam mileage was 23,572. Including 115.4 miles of electric lines, the grand total was 23,687 miles.

<sup>1</sup> Excludes electric lines.<sup>2</sup> Work service excluded.

**Commodities Hauled.**—Total tonnage of freight hauled by the railways during 1944 was by far the greatest handled in any year. It amounted to 155,326,332 tons as compared with 153,314,264 tons in 1943 and 84,631,122 tons in 1939. This was an increase over 1939 of 83.5 p.c. and over 1928, the pre-war peak, of 30.9 p.c., but due to longer hauls the ton miles increased by 109.5 p.c. over 1939 and 58.4 p.c. over 1928.

Agricultural products loaded increased from 25,704,840 tons in 1941 to 37,276,119 tons in 1944. Loadings of animal products, mine products, forest products, and manufactures and miscellaneous freight all showed substantial increases. Bituminous coal received from foreign connections increased from 4,410,773 tons to 6,776,067

tons. Crude petroleum from foreign connections increased from 31,085 tons to 4,156,904 tons in 1943 but decreased to 1,652,474 tons in 1944 while gasoline and petroleum oils showed an increase from 361,700 tons in 1939 to 9,177,427 tons in 1944; the greater part of this tonnage entered Canada from United States points.

### 15.—Commodities Hauled as Freight on Steam Railways, 1940-44

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National System, but the link of the C.P.R. line across Maine is included, as are the Canadian sections of United States railways.

**Railway Accidents.**—All injuries to passengers are included in Tables 16 and 17 but only injuries that keep the employee from his work for at least three days during the ten days following the accident are recorded for employees. "Others" in Table 16 include trespassers walking along tracks, stealing rides, etc., also persons crossing tracks at level crossings.

## 16.—Passengers, Employees and Others Killed or Injured on Steam Railways, 1936-44

NOTE.—For the years ended June 30, 1888 to 1900, see Canada Year Book, 1910, p. 378; for the years 1901 to 1919, the 1922-23 edition, p. 635; for 1920 to 1935, the 1938 edition, p. 662.

Year	Passengers		Employees		Others		Totals	
	Killed	Injured	Killed	Injured	Killed	Injured	Killed	Injured
	No.	No.	No.	No.	No.	No.	No.	No.
1936.....	6	691	93	6,338	282	703	381	7,732
1937.....	5	426	77	5,774	265	729	347	6,929
1938.....	4	351	54	4,961	237	568	295	5,880
1939.....	1	362	58	5,170	240	583	299	6,115
1940.....	6	378	59	6,231	235	606	300	7,215
1941.....	10	652	106	7,999	287	895	403	9,546
1942.....	44	779	120	10,008	279	743	443	11,530
1943.....	9	546	130	12,667	202	706	341	13,919
1944.....	8	562	103	13,187	242	630	353	14,379

These accidents include all accidents in which railway trains were involved and accidents on railway property. The classification of accidents used in the Bureau's vital statistics treats collisions between motor-vehicles and trains as motor-vehicle accidents; provincial statistics also class them as motor-vehicle accidents and, consequently, adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor-vehicle.

## Section 2.—Electric Railways\*

Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. Before many years their safety and convenience resulted in the discarding of the older systems. The first electric railway line in Canada and probably the first in North America, which ran between Windsor and Walkerville, was established early in June, 1886 (it is recorded that it was in active operation before June 11).

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life. In the cities of Eastern Canada, electric street railways are generally operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the street railways are owned and operated by the municipalities.

\* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. The annual report on "Electric Railways in Canada", published by that Branch, gives details of the operations of the individual railways.

The single overhead-trolley system is used by all electric railways but Edmonton. Montreal and Winnipeg have begun using also a double overhead trolley and trackless trolley-buses (42 of these buses being in service in 1944). Of the 33 systems, 23 operated both electric cars and buses in 1944, the buses numbering 1,444. The main advantage of the motor-bus is that it is not confined to a fixed route, and, in the case of both motor-buses and trolley-buses, the expense of track maintenance is eliminated.

### Subsection 1.—Equipment of Electric Railways

A summary of the equipment operated by electric railway companies is given in Table 18.

18.—Equipment of Electric Railways, 1941-44

Item	1941	1942	1943	1944	Item	1941	1942	1943	1944

### Subsection 2.—Finances of Electric Railways

When electric railways have ceased to operate because of either a decline in traffic or the substitution of motor-buses, their statistics have been excluded from the following table. Consequently, fluctuations in revenues, etc., have been affected by variations in traffic and also by changes in the mode of local transportation. Despite these changing conditions the gross revenues of electric railways have continued to increase since the low point reached in 1933, and very marked increases have been shown each year since 1940.

19.—Financial Statistics of Electric Railways, 1936-44

NOTE.—Available figures for the years 1901-1907 are given at pp. 608 and 609 of the 1926 Year Book; for the years 1908-1918 at pp. 681 and 682 of the 1936 Year Book; and for 1919-1935 at p. 665 of the 1938 Year Book.

Year	Capital Liability			Investment in Road and Equipment	Gross Earnings	Operating Expenses	Ratio of Expenses to Receipts	Em- ployees	Salaries and Wages
	Stocks	Funded Debt	Total

### Subsection 3.—Electric Railway Traffic

The passenger mileage travelled by electric cars in 1944 amounted to 126,629,418, by trackless trolley-buses 1,909,375 and by motor-buses 40,882,550. The number of passengers carried by electric railways in the years since 1939 showed an especially sharp rise over previous years due to increased traffic resulting from improved conditions, and the curtailment of passenger automobile traffic as a result of the War. The 1,249,707,399 passengers carried in 1944 amounted to by far the greatest traffic ever handled by these systems, the increase over 1943 being 6.2 p.c.

#### 20.—Statistics of Electric Railway Operations, 1936-44

NOTE.—Figures will be found at p. 676 of the 1933 Year Book for the years 1901 to 1910; at p. 681 of the 1936 Year Book for the years 1911 to 1918; and at p. 667 of the 1938 Year Book for 1919 to 1935.

Year	Miles of Road		Electric Car and Bus Mileage			Fare Passengers Carried <sup>1</sup>	Freight Carried <sup>1</sup>

### Section 3.—Express Companies\*

"Express service is an expedited freight service on passenger trains"; but express companies do not own the means of performing their services; they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have had close relations with the railways practically from the beginning. A brief history of the various express companies will be found at pp. 611-612 of the 1926 Year Book.

\* Revised and checked by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics. The annual report on "Express Statistics", published by that Branch, gives details of the operations of the individual companies.

Goods are sent by express for quick transit, so that express rates do not generally compete with freight rates. Thus, in its first tariff the Dominion Express Co., in pursuance of its contract with the Canadian Pacific Railway, gave a rate of  $2\frac{1}{2}$  times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue. The rates paid by the shipper are subject to the approval of the Board of Transport Commissioners. Express companies are all organized under powers conferred by Acts of the Dominion Parliament and their business consists in the expeditious shipment of valuable live stock, and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels and baggage, and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper.

**Express Company Operations.**—Four express organizations operate in Canada—three Canadian and one American. The Canadian Pacific Express Co., formerly the Dominion Express Co., is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National system and Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency, Inc., operates over the Canadian sections of United States railways and over the route from Skagway to points in Yukon. No statistics are available regarding the volume of traffic carried by express. Much of the traffic, of course, consists of parcels and small lots which would make statistical classification and measurement very difficult. However, there is also an important movement in car lots of live stock, fresh fish, fruit, vegetables and other perishable commodities.

The amounts paid by express companies to the carriers, i.e., railways, steamship lines, etc., for transporting express matter, are shown in Table 22 under the heading "Express Privileges".

## 22.—Revenues and Expenses of Express Companies, 1936-44

NOTE.—Corresponding figures for the years ended June 30, 1911 to 1918, are given at p. 673 of the 1927-28 Year Book, and for the years 1919 to 1935 at p. 669 of the 1938 edition.

## PART III.—ROAD TRANSPORTATION\*

Since the recent development of highways in Canada has been almost exclusively for the purpose of providing roadbed for motor-vehicle traffic, highways and motor-vehicles are treated as related features of transportation. After an introductory section, which briefly summarizes provincial regulations regarding motor-vehicles and motor traffic, the whole subject of road transportation is dealt with under the headings of facilities, finances and traffic, similar to the treatment extended to other forms of transportation.

## Section 1.—Provincial Motor-Vehicle and Traffic Regulations†

NOTE.—In this Section, it is obviously impossible to include the great mass of detailed regulations in force in each province. The purpose in view is to provide only the more important general information. The sources of information for detailed regulations for specific provinces are given at pp. 660-661. See also "The Highway and Motor-Vehicle in Canada", an annual bulletin published by the Dominion Bureau of Statistics, price 25 cts.

**General.**—The licensing of motor-vehicles and the regulation of motor-vehicle traffic lies within the legislative jurisdiction of the Provincial Governments in Canada. Regulations that are common to all the provinces are summarized here:—

**Operator's Licences.**—The operator of a motor-vehicle must be over a specified age (usually 16 years) and must carry a licence, obtainable only after prescribed qualification tests and renewable annually. Special licences are required for chauffeurs and, in some cases, for those granted licences who have not reached the specified age.

**Motor-Vehicle Regulations.**—In general, all motor-vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back, in the case of trailers). In order to conserve metal for war purposes, most of the provinces and both territories have issued only one licence plate for each vehicle each year since 1943. Gasoline rationing for motor-vehicles began on Apr. 1, 1942, but was discontinued in August, 1945. A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days) in any year to visiting private vehicles registered in another province or a State that grants reciprocal treatment. Further regulations require a safe standard of efficiency in

\* Except as otherwise indicated, the material in this Part has been revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

† The information in this Section has been revised from material provided by the officials in charge of the administration of motor-vehicle and traffic Acts and Regulations in the individual provinces.

the mechanism of the vehicle and of its brakes, and provide that equipment include non-glare headlights, a proper rear light, a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

*Traffic Regulations.*—In all provinces, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. In line with other measures to conserve gasoline and rubber in wartime, a speed limit of 40 miles per hour was put into effect over the whole of Canada, beginning May 1, 1942, this measure was rescinded in 1945. Slower speeds are always required in cities, towns and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motor-vehicles must not pass a street car that has stopped to take on or discharge passengers except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and any driver involved must not leave the scene of accident until he has rendered all possible aid and disclosed his name to the injured party.

*Penalties.*—These ascend in scale from small fines for minor infractions of any of the regulations to a suspension of the operator's driving permit, impounding of the car, or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting, while intoxicated, to operate a motor-vehicle.

There is such a wide variation in the different provinces regarding the basis of licences and fees, the regulation of public commercial vehicles, details of traffic rules, speed, and the use of motor-vehicles, that it is impossible even to outline them satisfactorily in the space available here. The most important features are summarized in the annual bulletin referred to in the headnote to this Section. The authorities responsible for the administration of motor-vehicles and the legislation governing vehicles and traffic are given below for each province.

**Prince Edward Island.** *Administration.* The Provincial Secretary, Charlottetown. *Legislation.* The Highway Traffic Act (c. 2, 1936) and amendments.

**Nova Scotia.**—*Administration.*—Motor Vehicle Branch, Department of Highways and Public Works, Halifax. *Legislation.* The Motor Vehicle Act (c. 6, 1932) and amendments, and the Motor Carrier Act (c. 78, R.S.N.S. 1923) as amended.

**New Brunswick.**—*Administration.*—Motor Vehicle Division, Department of Public Works, Fredericton. *Legislation.*—The Motor Vehicle Act (c. 20, 1934) and amendments.

**Quebec.**—*Administration.*—Motor Vehicle Bureau, Provincial Revenue Offices, Treasury Department, Quebec. *Legislation.*—The Motor Vehicle Act (c. 142, R.S.Q. 1941) and amendments.

**Ontario.** *Administration.*—Motor Vehicles Branch, Department of Highways, Toronto. *Legislation.*—The Highway Traffic Act (c. 288, R.S.O. 1937) and amendments. The Public Vehicle Act (c. 289, R.S.O. 1937) and the Commercial Vehicle Act (c. 290, R.S.O. 1937).

**Manitoba.**—*Administration.*—Provincial Treasurer, Winnipeg. *Legislation.*—The Highway Traffic Act (c. 93, R.S.M. 1940) and amendments.

*Note.*—In 1945, the Manitoba Legislature passed new legislation amending the Highway Traffic Act, Part VII, dealing with financial responsibility for accidents by public liability and property damage insurance or otherwise was repealed. Under the new legislation, generally speaking, if a motorist is unable to furnish proof of financial responsibility by insurance or otherwise at the time of an accident, whether the accident was his fault or not, drastic penalties ensue. These penalties include indefinite impoundment of the motor-vehicle and suspension of driver's licence and motor-vehicle registration. The penalties apply both to the owner and to the driver. This new legislation came into force by proclamation on Dec. 1, 1945.

**Saskatchewan.**—*Administration.*—Treasury Department, Taxation Branch, Highway Traffic Board, Revenue Building, Regina. *Legislation.*—The Vehicles Act (c. 98, 1945).

**Alberta.**—*Administration.*—Motor Vehicle Branch, Department of the Provincial Secretary, Edmonton, and Alberta Highway Traffic Board, Edmonton. *Legislation.*—The Vehicles and Highway Traffic Act (c. 275, R.S.A. 1942) and amendments, and Public Service Vehicles Act (c. 276, R.S.A. 1942), and Rules and Regulations. The Vehicles and Highway Traffic Act is administered by the Department of the Provincial Secretary, and the Public Service Vehicles Act by the Alberta Highway Traffic Board, Department of Public Works.

**British Columbia.**—*Legislation.*—The Motor Vehicle Act (c. 195, R.S.B.C. 1936), and the Highway Act (c. 116, R.S.B.C. 1936) and amendments thereto, as well as the Motor Carrier Act (c. 36, 1939). Enforcement of the Motor Vehicle Act, the Highway Act and the Motor Carrier Act is vested in the Commissioner of Provincial Police, Victoria, while the Highway Act is administered by the Minister of Public Works, the Motor Carrier Act by the Public Utilities Commission, and the Motor Vehicle Act by the Superintendent of Motor Vehicles.

**Yukon.**—*Administration.*—Territorial Secretary, Dawson, Yukon. Information regarding regulations may also be obtained from the Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa. *Legislation.* The Motor Vehicle Ordinance, No. 14, 1914, and amendments.

**Northwest Territories.**—*Administration.*—Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa. *Legislation.*—The Motor Vehicle Ordinance, assented to Mar. 26, 1941, and amendments.

## Section 2.—Roads and Vehicles

### Subsection 1.—Roads and Highways

**Historical.**—A brief description of the early colonization roads in Canada is given at p. 733 of the 1934-35 Year Book.

**Recent Highway Development.**—With the rapid increase in the percentage of motor-car owners to population (see p. 663), the demand for improved roads has become more and more insistent since the War of 1914-18. Furthermore, the advantages to be gained by attracting touring motorists have been a powerful incentive to governing bodies to improve trunk roads and scenic highways within their jurisdictions. One sphere where the motor-car and truck has been of special economic advantage has been in rural areas. As a result, according to the Census of 1941, there was one motor-vehicle for every 1.8 farms. This widespread rural ownership of automobiles and trucks has, in turn, brought about an improvement of secondary rural roads.

The table of road mileages below includes all roads under provincial jurisdiction and local roads in the Maritime Provinces and Ontario and estimates of local roads in the four western provinces. There are great stretches of country in the northern portions of Quebec, Ontario, the Prairie Provinces and British Columbia with very few people and very few roads, but the southern portions are well supplied. The Trans-Canada Highway provides a strategic link between Eastern and Western Canada that permits motorists to traverse the Dominion without entering United States territory.

Statistics of urban streets have been collected since 1935 from cities and principal towns; the small municipalities omitted would increase the totals very little. For 1944 the total number of miles of street reported was 14,686, composed of: 3,236 miles of bituminous pavements; 1,015 miles of portland cement concrete; 1,897 miles of bituminous surfaces; 3,348 miles of gravel and crushed stone; and 392 miles of other surfaces; making a total of 9,888 miles of surfaced streets and 4,798 miles of earth roads. These figures for urban streets or roads are not included in the table of highway mileage.

### 1.—Classification of Highways, by Provinces, 1944

NOTE.—The date for which the mileage was reported is indicated for each province. The figures for Canada are the sums of the mileages so reported. Urban streets are not included in the figures. Dashes indicate that no mileages were reported under the corresponding stub items.

<sup>1</sup> Includes road allowances.

<sup>2</sup> Cleared only.

*The Alaska Highway.*—The Alaska Highway, a 1,600-mile roadway, 24 to 36 feet wide, extends from Fort St. John, B.C.,\* through Whitehorse, to Fairbanks, Alaska. It was virgin territory, and a pioneer air route, in the spring of 1942; on Nov. 20, 1942, it was officially opened for wheeled traffic. About 10,000 United States engineer troops and 4,000 civilians, of whom half were Canadians, hewed their way through the bush, bridged the rivers, overcame mountain grades and sur-

\* Dawson Creek, about 30 miles to the southwest, is the railhead from which supplies are trucked in to Fort St. John. The existing road between Dawson Creek and Fort St. John has been improved and to all intents and purposes forms part of the main highway.

faced a roadbed, to permit a continuous journey by car. The maximum grade in hill country is 10 p.c.; in foothill country, 5 p.c. The Dominion Government supplied the right-of-way and exempted all shipments of construction equipment and material from customs duty and the United States Government carried out the work. On Apr. 3, 1946, the Canadian section of the Highway, from Edmonton to the Alaska border, together with the Northwest Staging Route airfields, telephone system and other defence projects, was taken over by Canada from the United States under agreement between the two countries.

The Northwest Highway System as it is now called will, for the present, be operated by the Canadian Army, but will be opened for civilian traffic as soon as possible.

### Subsection 2.—Motor-Vehicles

**Registration.**—The average population per vehicle registered was 8.0 in 1944. Total registrations numbered 1,502,567, a decrease of 9,278, or less than 1 p.c. as compared with 1943.

#### 2.—Motor-Vehicles Registered in Canada, by Provinces, 1936-44

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc. but not trailers or dealer licences. Figures for 1904-35 are given at p. 668 of the 1937 Year Book.

<b>Totals.....</b>	<b>1,177,558</b>	<b>302,611</b>	<b>4,676</b>	<b>15,045</b>	<b>1,502,567</b>

<sup>1</sup> Includes taxis.

<sup>2</sup> Includes service cars, tractors, etc.

**Apparent Consumption of Automobiles in Canada.**—The apparent consumption of automobiles in Canada in any year may be computed by deducting the number exported from the sum of the production and imports; figures for the years 1931-40 are given at p. 607 of the 1942 Year Book. During the war years, 1939-45, military vehicles constituted practically the whole output of the automobile factories.

**Wartime Control of Motor-Vehicles.**—During the War of 1939-45 the production of passenger motor-vehicles was stopped and available new cars set aside in a Government "bank" to take care of the needs of certain essential users. The last cars in this reserve bank were released in August, 1945. All production controls over motor-vehicles were removed with the end of the War and new rationing plans put into operation to govern the distribution of trucks and new passenger-vehicle production (see also pp. 577-578).

### Section 3.—Finances of Road Transportation

The cost of road transportation to the people of Canada may be summarized under the following headings: expenditures on roads and highways; expenditures of individuals and corporations on owned motor-vehicles; expenditures for freight and passenger services rendered by motor-vehicle public carriers such as taxi, bus and motor-transport companies; and expenditures on garages, service stations, etc. Since expenditures on roads and highways are made almost entirely by governmental bodies, fairly complete statistics are available regarding them but, owing to the tremendous number of individuals and organizations that would have to be canvassed and the difficulties involved, complete statistics are not available under the other headings. Sales of gasoline are given at p. 671, and revenues of motor-carriers at p. 667.

**Expenditures on Roads and Highways.** Roads in Canada, except in the Territories and the National Parks are under the jurisdiction of provincial and municipal authorities. During the war years, capital expenditures on highways, bridges and ferries have shown a decided drop as compared with the years immediately preceding the War. On the other hand, maintenance expenditures have increased considerably.

#### 4.—Capital, Maintenance and General Expenditures on Rural Highways, Bridges and Ferries in Canada, by Provinces, 1940-44

NOTE.—Provincial expenditures are for their respective fiscal years. Figures for 1917-37 are given at p. 666 of the 1939 Year Book, and for 1937-39 at p. 574 of the 1941 edition.

<sup>1</sup> Includes 1,500 in the Northwest Territories.<sup>2</sup> Includes expenditures in the Northwest Territories.<sup>3</sup> Includes payments from railways *re* elimination of grade crossings, etc.

**Provincial Funded Debt Incurred for Highways.**—By far the greater portion of the highway expenditure has been made by the provinces and consequently must be paid out of provincial taxes. Payment for much of the construction costs has been deferred and this has accounted for part of the rapid increase in provincial funded debt since 1919. In 1919 the net funded debt of all the provinces was \$270,338,092; in 1944 it had reached \$1,454,917,000, the portion chargeable to highways being \$822,599,145 or more than three times the net debt for all purposes in 1919. Prior to 1919 the provincial expenditures on highways were relatively small.

**Provincial Government Revenues from Motor-Vehicles.**—The taxation of motor-vehicles, garages, chauffeurs, etc., is an important source of Provincial Government income. In every province the following licences or permits, duly issued by the provincial authorities, are required: motor-vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. A sales tax on gasoline is also levied by each province and by the Dominion the rates being: Dominion, 3 cents; each of the three Maritime Provinces, 10 cents; Quebec and Ontario, 8 cents; each of the four western provinces, 7 cents; and Yukon, 3 cents. The more important sources from which provincial revenues from motor-vehicles are derived are shown in Table 6. Dominion Government revenues from import duties, excise and sales taxes are not included.

<sup>1</sup> Includes Dominion subsidy of \$10,251,891 based on 1941 tax.<sup>2</sup> Included with miscellaneous.<sup>3</sup> Included with passenger cars and trucks.

**Motor-Carriers.\***—The lack of statistical information in regard to the increasing amount of passenger and freight traffic on the highways of Canada led to the institution of a census of motor-carriers in 1941. The carriers were divided into two main classes: (1) passenger and (2) freight. Each of these was subdivided into two classes: (a) carriers with revenues less than \$20,000, and (b) carriers with revenues of \$20,000 or over. Bus companies handling urban traffic exclusively were compiled as a class. Many street railway systems operate motor-buses, but the statistics of such systems are not included here; they are included in electric railway statistics. Licensed carriers doing highway construction work, building air fields, etc., were excluded from the compilations. Taxi operators and urban delivery trucks also were excluded, except where their operations included inter-urban business. Carriers operating as both passenger and freight carriers were classed as passenger or freight according to the preponderance of the revenue. The passenger revenue of trucking companies and the freight revenue of bus companies were small percentages of their total revenues.

Operators with revenue of less than \$8,000 in 1941 were excluded from the 1942 and subsequent compilations. The figures given below are therefore not comparable in all respects with those for 1941 published at pp. 602 and 603 of the 1943-44 Year Book.

\* Statistics of traffic carried are given at p. 668, under Section 4, Road Traffic. For statistics by provinces see "Motor Carriers, Freight and Passenger", obtainable from the Dominion Statistician, Ottawa, price 10 cents.

<sup>1</sup> Revised since the publication of the 1945 Year Book.

### Section 4.—Road Traffic

Up to the present the motor-vehicle has affected passenger traffic of the steam and electric railways more than freight traffic. This diversion of passenger traffic has been effected largely by the private automobile, although the motor-bus is rapidly becoming more important and now operates between all large centres. The motor-truck also carries a considerable amount of freight.

As explained at p. 667, certain statistics in regard to motor-carriers were collected for 1943 and 1944, and those relating to freight and passengers carried are presented in Table 8. Traffic data were not available for the majority of the small operators. Many truck operators failed to report tons of freight carried and others reported only estimates; consequently these data are not very informative. A difficulty in compiling weights, which is quite understandable, is that much traffic was carried on a load basis and not a weight basis. Records of passengers appeared to be fairly complete, possibly because tickets were sold and accounted for, and the unit was not so complex as for freight carried.

#### 8.—Traffic Carried by Motor-Carriers, 1943 and 1944

NOTE—Large freight carriers include those with annual revenues of \$20,000 or over; small freight carriers those with annual revenues of from \$8,000 to \$20,000.

**Motor-Vehicle Accidents.** Motorists are required to report accidents but comprehensive statistics are not available for all provinces. The Vital Statistics Branch of the Bureau of Statistics compiles statistics on all deaths from motor-vehicle accidents and these are shown in Table 9. A direct comparison of such statistics between the provinces is of little value due to differences in size, population, motor-vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor-vehicles has also been tabulated. These data still give no weight to differences in use of motor-vehicles, differences in climate, roads, tourist cars, etc., all of which are factors in accidents.

Table 10 shows the number of persons killed or injured in automobile accidents as reported by the motor-vehicle branches of the Provincial Governments. It is quite possible that the latter reported some persons as injured who subsequently died from the injuries and these would be included in the fatalities of the vital statistics shown in Table 9, also accidents that occurred late in December and resulted in deaths would be charged to December by the provincial authorities but to January of the next year in the vital statistics. Consequently, the figures of fatalities of Tables 9 and 10 are not in complete agreement.

### 9.—Deaths Resulting from Motor-Vehicle Accidents in Canada, by Provinces, 1936-44

NOTE.—This table is compiled in the Vital Statistics Branch, Dominion Bureau of Statistics. Figures for the years 1926-1935 will be found at p. 578 of the 1941 Year Book.

**Gasoline Consumption.**—All provinces require retail sales of gasoline to be reported and a tax is imposed on all gasoline consumed by motor-vehicles using the highways and streets and also on that used for an increasing number of other purposes. However, the taxable gasoline is still largely consumed by motor-vehicles and indicates in a general way the increase or decrease in their use. Net sales are the differences between the total or gross sales reported and the quantities on which the tax is refunded in whole or in part, or on which the tax is not imposed at the time of sale.

Figures to the end of 1940 show a steady increase in gasoline sales since depression years. Later figures are, of course, materially affected by the conservation measures taken in 1941, and the system of gasoline rationing effective on Apr. 1, 1942. In 1945, the value of a ration coupon was increased after V-E Day and the whole rationing system abandoned following V-J Day.

## PART IV.—WATERWAYS\*

**The Canada Shipping Act.**—Legislation regarding all phases of shipping was consolidated under the Canada Shipping Act (c. 44, 1934). The Act was a sequel to the passage of the Statute of Westminster in 1931, under which the Parliament of Canada accepted full responsibility for the regulation of Canadian shipping. The Canada Shipping Act is a comprehensive piece of legislation and constitutes, in fact, the incorporation in the shipping law of Canada of features of international agreements and of British and previous Canadian legislation. A brief summary of the Act is given at pp. 681-683 of the 1938 Year Book.

## Section 1.—Equipment and Facilities

The developments and equipment to facilitate water traffic are classified under the sub-headings of shipping, aids to navigation and miscellaneous works, canals and harbours. A subsection is added giving figures of administrative activities regarding pilotage service, steamship inspection, personnel and accidents to shipping.

## Subsection 1.—Shipping

Since all waterways, including canals and inland lakes and rivers, are open upon equal terms, except in the case of the coasting trade, to the shipping of all countries of the world, the commerce of the Dominion is by no means entirely dependent upon Canadian shipping. However, a large part of the inland and coast-wise traffic is carried in ships of Canadian registry.

**Canadian Registry.**—Under Part I of the Canada Shipping Act, every ship that falls under the definition of "British Ship" given in Sect. 6 of the Act and is controlled as to management and use in Canada, must, unless registered elsewhere in the Empire, be registered in Canada. An exception is made in the case

\* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services, by the Department of Transport and the National Harbours Board; graving docks and part of the financial statistics, by the Department of Public Works; shipping subsidies by the Director of Steamship Subsidies, Department of Trade and Commerce; Panama Canal, by the Governor of the Panama Canal Zone; other canal traffic and statistics of shipping, by the Transportation and Public Utilities Branch, Dominion Bureau of Statistics.

of ships not exceeding 10 tons register and engaged solely in coastal or inland navigation. A ship (whatever her qualification for British registry) that is not registered in any part of His Majesty's dominions, is not entitled to the privileges accorded to British ships. Vessels about to be built *may* be recorded, and vessels being built or equipped *must* be recorded, by a registrar of British ships under the Act.

For a record of the number and tonnage of ships engaged in the carrying trade of Canada, see pp. 687-693. The tables are included there under traffic statistics because they relate more directly to traffic and services than merely to the shipping available. For an account of the shipping services operated by the Dominion Government, see pp. 677-678.

### 1.--Vessels on Canadian Shipping Registry by Provinces, as at Dec. 31, 1939-43

NOTE.—Figures for 1935-38 are given at p. 581 of the 1941 Year Book.

Province or Territory	1939		1940		1941		1942		1943

### Subsection 2. Aids to Navigation and Miscellaneous Works

Included under this heading are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the inland rivers and lakes, and at the entrances to harbours—a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described under marine services at p. 677. As a further aid to safe navigation, there are chains of radio signal and direction-finding stations which are described under radiotelegraphy, at pp. 713-714.

Aids to navigation, excepting very minor ones, are listed in three annual publications of the Department of Transport covering the Atlantic Coast, Inland Waters and Pacific Coast, respectively. A summary table showing marine danger signals maintained in Canada during the fiscal years 1929-40 is given at p. 581 of the 1941 Year Book.

A great deal has been done to improve navigable waters by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Probably the largest task of this nature has been the St. Lawrence River Ship Channel. An extensive floating plant is in service to maintain and improve the deep-water channel from Montreal to the sea for ocean-going shipping. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and also the control of roads and bridges that cross navigable channels. In order to prolong the season of naviga-

tion in important waters that freeze over in winter, ice-breaking operations are carried on at both the beginning and end of winter. This is particularly the case in connection with sea-going shipping from Montreal: these operations are primarily intended to prevent flood conditions during the spring ice break-up.

## 2.—Duration of the Season of Open Navigation on the St. Lawrence Ship Channel, 1932-45

NOTE.—For the years 1882-1911, see the Canada Year Book, 1934-35, p. 756, and for 1912-31, p. 615 of the 1942 edition.

Year	Channel Open, Quebec, to Montreal <sup>1</sup>	First Arrival from Sea, Montreal Harbour	Last Departure for Sea, Montreal Harbour	Year	Channel Open, Quebec to Montreal <sup>1</sup>	First Arrival from Sea, Montreal Harbour	Last Departure for Sea, Montreal Harbour
1932.....	Mar. 27	Apr. 14	Dec. 8	1939.....	Apr. 29	Apr. 29	Dec. 12

<sup>1</sup> "Channel Open" means it can be navigated although there may be floating ice still in the river.

## Subsection 3.—Canals

Before the period of extensive railway construction, which commenced for Canada in the 1850's, the water routes, more especially the St. Lawrence, the Great Lakes, and the Ottawa River, were the chief avenues of transportation. These routes were interrupted at certain points, necessitating portages and, to eliminate the toil of unloading, transporting and reloading at the portages, canals were constructed.

The earliest mention of canals in Canada is in connection with the Lachine Canal, begun by early French settlers in 1700. Only after the conquest of Canada by the British, however, were improvements of the main water routes made. In the early part of the 19th century increased internal and foreign trade and the introduction of steam navigation resulted in more attention being given to this work. Although some of the early canals were constructed primarily for military purposes, they soon became essential to the commercial life of the country. However, since the development of railways in Canada and, even more, since the growth of motor-vehicle traffic, the canals, with the exception of those on the Great Lakes-St. Lawrence River Route, are playing a minor part in the transportation activities of the country.

The principal canals of Canada are under the jurisdiction of the Dominion Department of Transport and each is accessible from the Atlantic Ocean. They serve six routes: (1) Montreal to Port Arthur and Fort William, via the St. Lawrence River and Great Lakes; (2) Montreal to the International Boundary near Lake Champlain, via the Richelieu River; (3) Montreal to Ottawa, via the Ottawa River; (4) Ottawa to Perth and Kingston, via the Rideau and Cataraqui Rivers; (5) Trenton, at the mouth of the Trent River on Lake Ontario, to the mouth of the Severn River on Lake Huron; and (6) St. Peters, Nova Scotia, on the Atlantic Ocean, to the Bras d'Or Lakes. The aggregate length of these six routes is 1,890 miles, the total of actual canal being 509 miles.

The names of the various canals along these routes, their locations and lengths, together with the number and dimensions of the locks thereon and other information will be found at pp. 626-629 of the 1926 edition of the Year Book, and in the pamphlet of the Department of Transport "Canals of Canada". A table showing the length and lock dimensions of canals as at the end of 1941 will be found at p. 583 of the 1941 edition of the Year Book.

Under the jurisdiction of the Dominion Department of Public Works are the St. Andrews Lock (length, width and draft, respectively, 215, 45 and 17 feet) at Selkirk on the Red River, Man., and another at Poupore, Que. There are also a few small isolated locks, each controlled under the authority of the province in which it is situated.

#### Subsection 4.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil, grain, etc. Facilities may include cold-storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil-storage tanks and, in the chief harbours, dry-dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Seven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Dominion Government appointees. In addition there are some 300 public harbours coming under the direct supervision of the Department of Transport of which 131 are in charge of harbour masters.

At most ports, in addition to the harbour facilities operated by the National Harbours Board or other operating commission, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil, sugar industries, etc. At a number of ports there are also graving docks which are dealt with separately.

#### 3.—Facilities of Six of the Principal Harbours of Canada, as at Dec. 31, 1945

NOTE.—The facilities include those under the control of other agencies as well as those of the National Harbours Board at these ports.

Item	Halifax	Saint John	Quebec	Three Rivers	Montreal	Vancouver

**National Harbours Board.**—A description of the origin and functions of the National Harbours Board is given at pp. 679-681 of the 1940 Year Book. The Board is responsible for the administration and operation of the following properties (representing a capital investment of approximately \$225,000,000): port facilities such as wharves and piers, transit sheds, grain elevators, cold-storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Churchill and Vancouver; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal and the Second Narrows Bridge at Vancouver. Operating revenues and expenses for these properties are given in Table 15, p. 685.

**Public Harbours and Harbour Masters.**—In other ports, the Governor in Council may create public harbours by proclamation (Part X of the Canada Shipping Act c. 44, 1934), and the Minister of Transport may from time to time appoint harbour masters for these ports, who will administer them under rules and regulations approved by the Governor in Council. Remuneration of these harbour masters will be made from fees levied on vessels under the terms of the Act.

**Graving Docks.**—The Department of Public Works of the Dominion Government has constructed five dry docks. The dock at Kingston, Ont., is under lease to the Kingston Shipbuilding Company, while the old Esquimalt dry dock was temporarily transferred to the Department of National Defence on Nov. 1, 1934. This transfer is to be effective until such time as the dock is commercially required, when it will be returned to the control of the Department of Public Works. The large dry docks at Lauzon, Que., and Esquimalt, B.C., can be divided into two parts and were built at a cost of approximately \$3,850,000 each. Under the Dry Dock Subsidies Act, (9-10 Edw. VII, c. 17, 1910), several docks have been subsidized by payments of 3 to 4½ p.c. per annum on the original cost for a given number of years, as shown in Table 5.

#### 4.—Dimensions of Graving Docks Owned by the Dominion Government

### Subsection 5.—Marine Services and Operations of the Dominion Government

The services covered by this Subsection are those dealing with steamship inspection, pilotage service, sea-faring personnel and accidents to shipping, and the operations are those of the Canadian Government Merchant Marine, and the Canadian National (West Indies) Steamships.

**Steamship Inspection.**—The Steamship Inspection Service provided for under Part VII of the Canada Shipping Act, 1934, consists of a headquarters staff, at Ottawa, and staffs of inspectors at the principal ocean and inland ports. The Act provides for a Board, known as the Board of Steamship Inspection, which decides on questions arising out of the administration of the Act. The Steamship Inspection Service is responsible for the administration and carrying out of the provisions of Part VII of the Act respecting the periodic inspection of power-driven ships and the issue of inspection certificates, the assignment of load lines, the conditions under which dangerous goods may be carried in ships, and the protection against accident of workers employed in loading or unloading ships. The Steamship Inspection Service is also responsible for the administration and carrying out of the provisions of Part II of the Act relating to the certification and employment of marine engineers.

#### 6.—Steamship Inspection, by Inspection Divisions, Year Ended Mar. 31, 1944

Totals.....	1,701	2,169,972	1,286	1,919,010	12	34,038	493	216,924

**Pilotage.**—This service functions under the provisions set forth in Part VI of the Canada Shipping Act (c. 44, 1934). Qualified pilots may offer their services to the stranger in local and confined waters. At the same time, pilotage might also be considered as a method of insurance.

There are 42 pilotage districts in Canada, 9 of which (Sydney, Bras d'Or Lakes, Halifax, Saint John, Quebec, Montreal, St. Lawrence-Kingston-Ottawa, Churchill and British Columbia are under the Minister of Transport as pilotage authority. The Pilotage District of New Westminster, B.C., is under a local authority. The other districts function under local pilotage authorities appointed by the Governor in Council under the provisions of the Canada Shipping Act.

A table showing the number and aggregate tonnage of ships using pilots for the major Canadian ports during the fiscal year 1940, is given at p. 586 of the 1941 edition of the Year Book. The publication of later figures was prohibited during war years and they have not yet been released.

**Seamen Shipped and Discharged.**—The numbers of seamen shipped and discharged at Canadian ports under the provisions of the Canada Shipping Act (R.S.C. 1927, c. 186 and c. 44, 1934) are given for the years 1908 to 1917 at p. 690 of the 1938 edition, and for the years 1918 to 1939, at p. 587 of the 1941 edition. The publication of this information was discontinued during the war years.

**Wrecks and Casualties.**—The 1911 Year Book, at p. 381, gives details of the numbers of wrecks, their net tonnage, the number of lives lost and the amount of stated damages, for the years 1870 to 1910. The series is continued at p. 691 of the 1938 Year Book for the years 1911 to 1920 and at p. 620 of the 1942 Year Book for 1921-40. The publication of such statistics was not permissible during the war years 1939-45.

**Canadian Government Merchant Marine.**—The circumstances under which the Canadian Government became possessed of, and responsible for, the operations of a merchant marine are explained at p. 776 of the 1934-35 Year Book. A table showing the operating results from 1919 to 1936 is given at p. 689 of the 1937 Year Book.

The original fleet of the Canadian Government Merchant Marine, Ltd. consisted of 66 vessels with a total deadweight tonnage of 391,212. The original cost of the fleet was \$79,661,921 and the capital loss thereon was \$74,239,356, the total capital recovery of \$5,422,565 being made up as follows: (1) the sale of 56 vessels for \$2,378,018; (2) the proceeds of insurance on 4 vessels lost, amounting to \$2,111,475; (3) the sale of 6 vessels to the Canadian National (West Indies) Steamships, Ltd., for \$933,072.

The charter of the Canadian Government Merchant Marine, Ltd., and its subsidiary companies, although inactive since 1936, had not been surrendered and in 1940 the Company was reconstituted and is now operating on behalf of the Canadian Government certain ships seized in prize and either requisitioned for use by the Canadian Government or condemned by the Court.

**Canadian National (West Indies) Steamships.**—In conformity with the Canada-West Indies Trade Agreement Act of 1926 (16-17 Geo. V, c. 16), the Dominion Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships, Ltd. Due to war restrictions, no information later than that published at p. 588 of the 1941 Year Book has been made available.

## 7.—Financial Statistics of Canadian National (West Indies) Steamships, Ltd., 1937-45

NOTE.—Statistics for 1929-36 are given at p. 620 of the 1942 Year Book.

Year	Operating Revenues	Operating Expenses	Operating Net	Depreciation	Interest	Book Loss or Surplus
	\$	\$	\$	\$	\$	\$

## Section 2.—Financial Statistics of Waterways

The principal statistics available that give any idea of the cost of waterborne traffic consist of the record of public expenditures on waterways. Such expenditures may be classified as capital expenditures, or investments and expenditures for maintenance and operation. Revenues from operation are also recorded. Undoubtedly, in so far as capital expenditures for the permanent improvement of waterways are concerned, those of the Dominion Government cover the major part. There has been some expenditure by municipalities on local harbour facilities, and private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian Government Merchant Marine and the Canadian National (West Indies) Steamships, has come almost entirely from private sources. No figures are available regarding private investments in shipping except those appearing in the reports of the operating companies which cover only a portion of the field. Neither are there statistics showing the revenues of ship operators from passenger and freight traffic.

**Capital Expenditures.**—So far as capital expenditures on Canadian waterways are concerned, the only figures available are those compiled from the Balance Sheet of the Dominion or the annual reports of the Departments of Transport, Public Works and Finance, but such investments or capital expenditures cannot be regarded as any indication of the present worth of the undertakings represented. The costs of building canals and other waterways and permanent works to facilitate water transportation in Canada are represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of earlier works where they had been superseded, as in the first Welland Canals for instance. To this extent such figures are an overstatement of the present value of the works in use. There is a further limitation that should be noted in regard to such figures: they do not include the costs of maintenance and improvements or the operation of these works, such charges having been made to the consolidated fund as annual expenditures and not to capital account. Table 8, which shows capital expenditures on canals, marine service and miscellaneous water transport facilities to have reached the grand total of over \$381,900,000, must be interpreted with the above qualifications in mind. In Table 9 the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1944 and 1945: they are in addition to the capital expenditures of Table 8. These figures reflect the capital situation in regard to the national harbours of Canada far better than do those of Table 8 in the case of waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they have also been subject to deductions for depreciation and the scrapping or abandonment of plant and more nearly approach the present value of the properties under the administration of the National Harbours Board.

### Waterway Expenditures and Revenues on Consolidated Fund Account.—

Expenditures under this heading are mainly for the operation and maintenance of various facilities for water transport, but unfortunately the line between operation and maintenance expenditure is not as finely drawn as is desirable in Tables 11 to 13.

In addition to the recurrent expenditures to facilitate water transportation shown here, the Dominion Government annually expends a considerable amount to cover deficits of the Canadian National (West Indies) Steamships, Ltd., and of the National Harbours Board, for mail subsidies and steamship subventions as shown in Table 16, and for the maintenance and operation of radio stations to aid navigation as shown in Table 3 of Part VII at p. 710. Operating expenditures and revenues of facilities administered by the National Harbours Board are shown separately in Table 15. The National Harbours Board operates as a statutory corporation. The improvement in the financial results since control was unified under the Board, is indicated by the increase of consolidated operating income from \$2,452,000 in 1935 to \$6,307,066 in 1944 and \$6,407,089 in 1945.

### Section 3.—Water Traffic and Services

Complete statistics, comparable with those given for the railways, showing all the freight carried by water, are not available. Indeed it would be very difficult to obtain a record of the traffic handled by small independent coasting vessels. However, there is a record of the number and tonnage of ships calling at all ports at which there are customs collectors, of cargoes of vessels trading between Canadian and foreign ports and of all cargoes that pass through the canals.

#### Subsection 1.—Shipping

A brief description of the early development of Canadian shipping is given at pp. 597-598 of the 1941 edition of the Year Book. Shipping statistics are compiled from reports collected by customs officers at customs ports: consequently they are affected by customs regulations and include only data for vessels trading in and out of ports at which such officers are employed.

For years prior to and including the year ended Mar. 31, 1937, the statistics were summarized by the customs officer at each port and compiled by the Department of National Revenue; for subsequent years, compilations were made by the Dominion Bureau of Statistics. Effective Apr. 1, 1940, each vessel departing from port makes a statistical report which is forwarded to the Bureau and from these reports all compilations of shipping statistics are made.

With this change of procedure, changes have been made in the recording of the data. Cargoes are required to be reported in tons of 2,000 lb. or in tons of 40 cu. ft. Although previous reports did not define the ton, it is quite probable that for many cargoes the long tons of 2,240 lb. was used. Reports are not made now for vessels of less than 10 registered net tons and the tonnage of tugs is the gross ton and not the net ton used for cargo vessels. Fishing vessels are not required by customs regulation to report when operating from certain ports; consequently, the data are not on the same basis as data for cargo vessels.

Vessels in coasting service and vessels fishing in Canadian waters are not required by customs regulations to report any details of cargoes loaded or unloaded so that cargo data are available only for vessels in foreign service. The cargoes are not cargoes on board but cargoes unloaded and loaded at the respective ports.

### Subsection 2.—Canal Traffic

Since the canals of Canada are open to the vessels and traffic of all nations upon equal terms, United States traffic constitutes an important part of the total carried through certain canals, especially the Welland Ship Canal. This is shown in Tables 20 and 22. More complete details of the traffic through canals may be found in the annual report "Canal Statistics" published by the Dominion Bureau of Statistics.

### 20.—Traffic Through Canadian Canals, by Nationality of Vessels and Origin of Freight, Navigation Seasons, 1936-45

NOTE.—Figures include duplications where cargoes use two or more canals. For Canadian canal traffic from 1886-99, see the 1902 Year Book, p. 398; for the figures of 1900-10, the 1933 Year Book, p. 697; and for 1911-35, p. 703 of the 1933 edition.

<sup>1</sup> Figures for the United States include a small percentage to or from ports of other foreign countries.

The figures in Tables 20 and 22 include duplications where the same freight passes through two or more canals, but in Table 23 duplications in the traffic passing through the St. Lawrence and Welland Ship Canals and the Canadian Lock at Sault Ste. Marie, which amounted to 3,098,981 tons in 1944 and 3,881,423 tons in 1945, have been eliminated.

Grain transhipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne or other transhipping port.

<sup>1</sup> Through both Canadian and United States locks at Sault Ste. Marie.

Traffic through the Sault Ste. Marie canals, Canadian and United States, has been approximately twice as heavy as the traffic through the Panama Canal during the last ten years for which records are available, and in 1940 was almost three times as heavy. It has varied from a low of 20,484,000 tons in 1932, which was less than the Panama traffic, to a high of 120,200,814 tons in 1942. The dominant traffic, from a tonnage aspect, is iron ore. During the past 50 years this has fluctuated from 4,901,000 tons in 1892, a low of 3,607,000 tons in 1932 and an average of 50,000,000 tons in the 1920's to a peak of 94,326,578 tons in 1942. Although wheat has ranged as low as only 7 p.c. of the iron-ore tonnage, its value has generally been greater than that of the iron-ore traffic, and has been the most valuable single commodity passed through the canals; in 1928 the value of wheat passed through the canals was 40 p.c. of the value of all traffic. Other grains have been about a quarter to a fifth of the wheat tonnage and a smaller ratio of the value.

Bituminous coal has generally been second in tonnage to iron ore and a large part of it is carried by the ore vessels when returning for a cargo of ore.

The tonnage of the three principal commodities and the tonnage of all freight passed through the canals for the years 1913 to 1945, inclusive, are plotted in the following chart.

**The Panama Canal.**—The Panama Canal, which was opened to commercial traffic on Aug. 15, 1914, has been a waterway of great importance to British Columbian ports, from which vessels leave direct for British and European ports throughout the year. As an alternative route to that of the transcontinental railway lines, such a passage by water is of vital importance in the solution of the larger transportation problems of the continent, and while its influence is perhaps more potential than actual, such a check on transcontinental rail rates is a valuable one. During the War of 1914-18 the great expectations based upon the opening of the Canal were not realized, owing to the scarcity of shipping. However, with the post-war decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe took place, and, while the proportion carried in vessels of Canadian registry was comparatively small, the cargo tonnage nevertheless assumed considerable proportions. The outbreak of war in September, 1939, reduced the supply of shipping for the ordinary commerce of the nations involved. It is probable that during the war years 1939-45 transcontinental rail transportation has been substituted in Canada for some of the traffic formerly passing through the Panama Canal.

## 24.—Traffic To and From the East and West Coasts of Canada via the Panama Canal, Years Ended June 30, 1929-45

NOTE.—Figures for the years 1921-28 are given at p. 707 of the 1938 Year Book.

<sup>1</sup> Approximate figures.

A table at p. 636 of the 1942 Year Book shows the total commercial traffic through the Panama Canal during the years 1929-40.

### Subsection 3.—Harbour Traffic

The freight movement through a large port takes a number of different forms. The overseas movement, i.e., the freight loaded into or unloaded from sea-going vessels, frequently constitutes a surprisingly small part of the total. Usually the volume coming in and going out by coastwise vessels is larger. Then there is the 'in transit' movement of vessels that pass through the harbour without loading or unloading. Finally there is the movement from one point to another within the harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled in all the ports and harbours of Canada, as many of them are small and are without the staff necessary to obtain a detailed record of freight handled. Similarly, statistics of cargo carried by vessels in coastwise and inland international shipping are not available. The National Harbours Board administers a number of the principal ports of Canada and for the years 1936-39, has published a record of the principal commodities in water-borne cargo handled at the ports under its control. These are shown for 1939 at pp. 701-702 of the 1940 Year Book. Owing to wartime restrictions statistics are not available.

## PART V.—CIVIL AIR TRANSPORTATION\*

NOTE.—The treatment of military activities and organization falls more properly under the subject of National Defence (see "Air Force, Royal Canadian" in the Index).

### Section 1.—History and Administration

#### Subsection 1.—Historical Developments

**Historical Sketch.**—A brief historical outline of the development of aviation in Canada appears at pp. 710-712 of the 1938 Year Book.

**Trans-Canada Airway.**—An article describing this Airway appears at pp. 703-705 of the 1940 Year Book.

\* Descriptive and administrative information has been prepared from material supplied under the direction of A. D. McLean, O.B.E., Controller of Civil Aviation, Department of Transport, and W. S. Thompson, C.B.E., Director of Public Relations, Canadian National Railways, Department of Transport; statistics have been compiled by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch of the Dominion Bureau of Statistics.

**Transatlantic Air Service.**—The work done to establish an air service between Canada, the United States and the British Isles via Newfoundland up to the outbreak of war is described at pp. 705-707 of the 1940 Year Book.

**Pre-War Civil Aviation and the Defence Program.**—An article describing the developments of importance in civil aviation prior to the outbreak of war in 1939, and also the contribution that civil aviation has made to the air defence program, is given at pp. 608-612 of the 1941 Year Book.

**Administration.**—The 1942 Year Book, at pp. 638-639, outlines the administrative arrangements for the control of civil aviation. Later developments are given in the Section on Wartime Control of Transportation, at pp. 640-644.

## Subsection 2.—Recent Developments

### Transition Problems—War to Peace

The cessation of hostilities in Europe in May, 1945, and the somewhat unexpected collapse of Japan in August brought an avalanche of problems in civil aviation. Immediate steps were taken to dismantle whole sections of the vast structure erected for war purposes and at the same time restrictions, which had necessarily been imposed on civil flying, were removed. Airports, airways, communications systems, aids to air navigation together with their operation, control and maintenance were turned over to civil administration as fast as circumstances would permit.

**Disposal of Airports.**—One hundred airports declared surplus to Royal Canadian Air Force requirements by the end of the year were turned over to the Crown Assets Allocation Committee who, in turn, turned them over to the Department of Transport. If after investigation it appeared that a site had no continuing value for civil aviation purposes, the Crown Assets Allocation Committee was so advised and the property was turned over to the War Assets Corporation for disposal. Of the sites declared surplus, 62 were retained and 38 handed over to War Assets Corporation.

Screening of the buildings on surplus airports did not await a final decision regarding the airport proper, and such as would obviously be surplus to future use were returned as quickly as possible to the Crown Assets Allocation Committee so that they could be made available to alleviate housing and material shortages. However, many such buildings were required in their present locations for War Assets storage warehouses.

The retention of the sites for civil purposes postulated but did not solve the problems as to who was to be responsible for their administration. In selecting these sites, steps had been taken to locate them, so far as military requirements would permit, in areas where there was reason to believe they would have continuing value to the communities in which they were located. It was found, however, that in a large number of cases the communities had not had an opportunity to give much thought to the problem involved in operating and maintaining these airports and had not set up the necessary organization or made financial provision to do so. The Department, therefore, was faced with the necessity of engaging personnel and taking other steps to maintain these airports in operation, or place them on a caretaking basis for a brief period.

**Handing over War Facilities—United States to Canada.**—The withdrawal of the United States Forces from Canada and the purchase by Canada of the facilities installed by them raised other problems. Three routes, viz.: (1) from Edmonton down the Athabaska and Slave Rivers to Providence and thence following the Mackenzie River to Fort Norman; (2) the Crimson Route from The Pas to Fort Churchill; and (3) Southampton Island and Greenland to Europe, were handed over to the Canadian authorities. The cost of operation of these northern fields is enormous and the question of their disposal is still under consideration. Three alternatives are apparent: to operate and maintain them in the hope that traffic over them will be resumed in the not too distant future; to retain them on a caretaking basis in the hope of retaining the facilities in such a state of preservation that services could be resumed on fairly short notice; to abandon them altogether. The complexity of the problem is such that it has not yet been found possible to work out a satisfactory solution in all cases.

The Department of Transport provided meteorological services for all the Armed Forces with the exception of a few areas in which the United States Forces had brought in their own meteorological staff and equipment. With the problem of taking over the air routes noted above came that of revising the meteorological organization in order to meet civil requirements.

The volume of military flying made it necessary to establish airport and airway control, in some cases under military jurisdiction, on all the principal airports and air routes. Immediate steps were taken to turn most of these back to the Department of Transport for civil administration. For the present, however, the Air Force has maintained control of the Northwest Staging Route from Edmonton to Whitehorse.

**Revival of Commercial Flying.**—Due to the shortage of personnel and equipment, commercial flying during the War had been held to a minimum consistent with the well-being of the national economy. With the advent of peace, civil operators immediately turned their attention to the purchase of much needed flying equipment and the hiring of crews to meet the civil demand for more flying. In connection with the purchase of flying equipment, attention was naturally directed to surplus military aircraft that could be profitably converted to civil use. In the vast majority of cases, it was found that surplus military aircraft had little or no civil value. The types that have found most favour with civil operators are the Dakota, which is being converted to a DC-3 civil air transport plane, the Norseman, which never lost more than a few of its civil characteristics, the Cessna Crane, and the De Havilland Tiger Moth. Pending the appearance of the latest types of civil aircraft in the commercial field, a considerable number of converted aircraft are doing duty to meet revised civil needs.

\* **Private Flying.**—Private flying was at a complete standstill during the War. Due to lack of equipment, it has not yet made a very spectacular comeback but there are good grounds for believing that it will assume a much more important position hereafter than it held before the War.

**Revival of the Club Movement.**—With the end of hostilities, the Royal Canadian Flying Clubs, which had been doing primary training for the Royal Canadian Air Force, ceased to operate in that capacity. Without exception they signified their intention of continuing operations in the post-war world. The pre-war contract has expired and a new one has not yet been agreed upon, but negotiations between the Club and the Department concerned are under way. In the

meantime essential buildings and equipment are being made available on a nominal basis to clubs that participated in the Joint Air Training Plan and most of these have resumed active operations.

### Canadian Scheduled Air Transport Services

**Trans-Canada Air Lines in 1945.**—Operating over the same route mileage as the previous year, Trans-Canada Air Lines' daily scheduled miles totalled 32,354 at the end of 1945 which was an increase of 6,090 miles per day, or 23 p.c., as compared with 1944. The number of miles flown during the year increased accordingly to 11,546,227, an increase of 1,511,422. The number of revenue passengers carried was 183,121, 17 p.c. more than the previous year, and air express traffic showed a growth of 11 p.c., amounting to 950,323 lb. The return to peace brought a reduction in the volume of mail and the 3,429,232 lb. carried by the air line was a slight decrease from 1944.

More hangar accommodation was procured by the Company at Winnipeg, its operational headquarters, while Moncton was established as a major maintenance base. At La Guardia Airport, New York, additional space in the ramp building was obtained and an experimental radar station for the study of radar application to civil air operations began operating at Winnipeg.

During the year, Trans-Canada contracted for the acquisition of 24 DC-3 aircraft to meet proposed service extensions in Canada and the United States. These are being converted in Canada from military transports to 21-passenger commercial airliners and with delivery to the Company of the first three in the latter part of 1945, T.C.A.'s fleet was enlarged to 28. A program of major overhaul was carried out on the fleet to ensure a continued high efficiency of performance.

A third daily transcontinental flight was completed by the extension of an existing Montreal-Winnipeg operation through to Vancouver. A fourth such flight was started during December with the inauguration of another flight between Vancouver and Lethbridge. Schedules on the Alberta inter-city route between Lethbridge, Calgary and Edmonton were doubled by adding third and fourth flights coincident with the increase in the transcontinental service, and a fourth daily flight between Montreal and Halifax together with a second flight between Halifax and Sydney were added in August.

Besides providing mechanical training, one of the largest departments, T.C.A. schools continued to turn out pilots, radio operators, passenger agents, stewardesses and traffic personnel. The instruction of former R.C.A.F. pilots was considerably accelerated with eight classes, totalling 76 men, being completed. The return of former male staff from the Armed Forces resulted in a decrease of female employees but the total staff of the Air Line was 3,272 as compared with 2,700 at the end of 1944.

**Canadian Government Transatlantic Air Service.**—Trans-Canada continued to operate this service which was organized in 1943 primarily for the swift transport of mails to and from the Armed Forces overseas. However, towards the close of the year it was developing into a full commercial operation. Passenger tickets were being sold in T.C.A. ticket offices and purser-stewards were catering to passengers'

comfort. A new ticket office was opened at London, England, and a transatlantic express service was inaugurated, while four Lancasters were added to the fleet. Approximately 900,000 lb. of mail were carried by this service during the year and at year's end T.C.A. personnel had flown more than 500 Atlantic crossings.

**Canadian Pacific Air Lines.**—The scale of operations of the Canadian Pacific Air Lines during 1945 was slightly lower than in the previous year, owing to the termination of wartime activities sponsored by the Canadian and United States Governments in northwestern Canada. Considerable improvement took place, however, in the last six months of 1945, largely as a result of the expansion of mining activities throughout the country.

During 1945 all activities of Canadian Pacific Air Lines in the overhaul plants operated for the Department of Munitions and Supply and in the British Commonwealth Air Training Plan came to a close. During the year the C.P.A. acquired new and larger aircraft types, including 3 Lodestars, 4 Douglas C-47's and 4 Norseman, resulting in a greater standardization of its fleet.

The component companies of the C.P.A. in 1945 flew 5,373,403 revenue miles, as compared with 5,984,602 in 1944; carried 125,110 passengers as compared with 104,166; 9,419,556 lb. of freight as against 8,027,442 lb.; and 1,253,537 lb. of mail as compared with 1,436,153 lb. in 1944.

**Independent Air Lines.**—Operating certificates have been issued by the Department of Transport since the cessation of hostilities to 20 new independent air lines which have been established in most cases by returning Air Force personnel. These are additional to the independent organizations which were not absorbed by the Canadian Pacific Airways and which included the Maritime Central Airways Limited, Charlottetown, P.E.I., and M. and C. Aviation Company Limited, Prince Albert, Sask.

## Section 2.—Airports and Aircraft

### Subsection 1.—Summary Statistics of Civil Aviation

From commercial operators of aircraft, aeroplane clubs, etc., the Bureau of Statistics collects and compiles civil aviation statistics, with the exception of data on licences and accidents, which are reported by the Civil Aviation Division of the Department of Transport. To preserve as much continuity with earlier statistics as possible, figures for certain important items are given in Table 1 for the years 1939-44. However, statistics collected since 1936 have been somewhat enlarged and consequently for some items in Table 1 and for much of the data in the following tables no figures are available prior to 1936.

The commercial companies are divided into two classes, those engaged principally in international flying between Canada and the United States and those engaged exclusively or almost exclusively in flying between Canadian stations.

Regular flying on the Montreal to Vancouver portion of the Trans-Canada Airway began toward the end of 1938. Therefore the statistics for 1939 were the first to include extensive operations of the Trans-Canada Air Lines. This Company is in a class by itself in Canadian aviation at present, and its inclusion somewhat distorts comparisons with data of previous years. The long journey and relatively heavy passenger traffic raises the average journey and average passenger per aircraft mile, although the business of other companies may be practically unchanged.

The companies operating in the north country carry passengers, freight and supplies into and out of the mines and account for the large volume of freight carried by air in Canada. Because of this feature of civil aviation in Canada, it is difficult to make comparisons with other countries where the traffic is principally inter-urban passenger traffic between well-established airports.

### 1.—Summary Statistics of Civil Aviation in Canada, 1939-44

NOTE.—Figures for 1921-23 may be found at p. 616 of the 1924 edition of the Year Book, for 1924-29 at p. 661 of the 1930 edition, for 1930-34 at p. 693 of the 1936 edition and for 1935-38 at p. 640 of the 1942 Year Book. Statistics for the Trans-Canada Airway were included for the first time in 1939, and general comparisons of figures after 1938 with previous years are thereby distorted (see text above).

<sup>2</sup> For Canadian carriers only.

<sup>3</sup> Not available.

<sup>4</sup> Revised since the publication of the 1945 Year Book.

## Subsection 2.—Ground Facilities

Early ground facilities for civil aviation in Canada consisted chiefly of municipal or flying-club airports adjacent to the larger urban centres, and of numerous terminals from which commercial flying services operated, mainly into the northern

mining regions. A large air terminal was built at St. Hubert, seven miles south of Montreal, with immigration, customs and postal facilities available. These earlier airports formed the nucleus which, with many additions and improvements, became the chain of aerodromes constituting the Trans-Canada Air Lines. The development of this airway and the use and expansion of the ground facilities for military purposes during the War of 1939-45 affected the status and facilities of many former municipal airports.

## 2.—Civil Airports in Canada, as at Dec. 31, 1944

## Subsection 3.—Aircraft

The construction in Canada of aircraft and equipment is essential to the development of flying. Before the War several manufacturers were producing original types especially suited to operation in Canada, and a number of manufacturers from England and the United States formed branches in Canada for the assembly and servicing of their products. There were also a number of plants for the manufacture of landing gear, especially skis and pontoons, designed to meet the particular requirements of Canadian conditions. Plants equipped to manufacture civil aircraft and parts were changed over during the War to the production of military types and the industry expanded by many additional plants and firms. Pre-war figures are given at p. 617 of the 1941 edition of the Year Book.

## Section 3.—Finance and Employees

### Subsection 1.—Dominion and Other Expenditures and Revenues

The status of civil aviation in Canada has changed considerably in recent years as regards both civil and military requirements. Until the institution of the Trans-Canada Air Lines, the development of civil aviation was limited to the provision of private, commercial and administrative services for the more remote sections of Canada, chiefly in the northern mining, forestry and trapping regions. Recently, however, the Dominion Government has improved existing airports and constructed others for civil and for military purposes. In addition to direct expenditures, the Department of Transport has given assistance to municipalities for the construction and development of airports totalling \$3,707,311.

### 3.—Capital and Ordinary Expenditures and Revenues of the Department of Transport in Connection with Civil Aviation, Years Ended Mar. 31, 1943-45

NOTE.—Compiled from Department of Transport Records.

Item	1943	1944	1945	Total as at Mar. 31, 1945

Miscellaneous revenues relating to War appropriation.....	69,166	106,108	162,108	

<sup>1</sup> In addition to the above, expenditures for construction and development of Airways and Airports from Unemployment Relief Appropriations to the extent of \$3,811,739 were made by Department of National Defence prior to establishment of Department of Transport in 1936. There was also a payment of \$85,260,822 covering acquisition of United States and other war installations in Canada and Labrador.

The capital expenditures made by commercial air carriers for property as reported for the end of 1944 are shown in Table 4. No statistics are available regarding expenditures on flying operations by the Dominion and Provincial Governments or by private individuals.

#### 4.—Cost of Property, Revenues and Expenditures for Licensed and Unlicensed Commercial Air Carriers in Canada, 1944

#### Subsection 2.—Employees and Salaries and Wages

The numbers of civil air personnel licensed in recent years is shown in Table 1, p. 697. However, those figures include pilots and engineers in the employ of the Dominion Government and of private individuals as well as those not employed at all in the ordinary sense; licensed personnel of these classes are not included in the classes shown in Table 5.

#### 5.—Employees and Salaries and Wages in Civil Aviation in Canada, 1944

Class of Employee	Provincial Government		Commercial Canadian		Total	
	No.	\$	No.	\$	No.	\$
General officers.....	5	17,778	48	326,416	53	344,194

<sup>1</sup> Exclusive of 131 employees paid \$253,116—Canadian domiciled employees of United States carriers.

### Section 4.—Aerial Traffic

Table 1, p. 697, shows large increases in passenger traffic during the years from 1940 to 1944. The amount of freight carried by aircraft grew rapidly, increasing from 2,372,467 lb. in 1931 to a record of 24,317,610 lb. in 1937; it decreased considerably during the war years, amounting to 12,430,645 lb. in 1944 due mainly to the decline in the gold-mining industry and the restrictions in the use of aircraft for trapping and other operations. In the years before the War a large part of the air freight was mine machinery and supplies to gold-mining companies. Many of these mines, located in the northern parts of Quebec, Ontario and the Western Prov-

inces and in the Northwest Territories, were accessible only by canoe in the summer and dog team in the winter or by aircraft, and aircraft transportation was the cheapest and most effective method of transportation. Further information regarding air-mail services appears in Part VIII of this Chapter, p. 722.

Statistics for international carriers include only traffic over Canadian territory for both Canadian and foreign operators. A small traffic across Canadian territory and between foreign stations is also included. Statistics for Canadian carriers operating international routes are included both as "International" and "Canadian" but duplications are excluded in the totals.

## PART VI.—WIRE COMMUNICATIONS\*

## Section 1.—Telegraphs

The early history of telegraphic communication in Canada is given at p. 778 of the 1934-35 Year Book.

**Dominion Government Telegraph Service.**—This service is operated by the Telegraph Branch of the Department of Public Works. Its general object is to furnish wire communications for outlying and sparsely settled districts where the amount of business is so small that commercial companies will not enter the field but where the public interests require that there should be communication. Thus, these facilities include: telegraph and telephone services to scattered settlements around the coast of Cape Breton Island; cable services to Campobello, Grand Manan, and other islands in the Bay of Fundy, to Prince Edward Island and a number of small islands in the Gulf of St. Lawrence; telegraph services along the north shore of the Gulf of St. Lawrence from Quebec to the Straits of Belle Isle; cable connections with Pelee and Manitoulin Islands in Ontario; some lines to northern outlying districts in Saskatchewan; lines from Edmonton to the Athabaska and Peace River country in Alberta; telegraph or telephone communications around the coast of Vancouver Island and to fishing, lumbering and mining settlements along the coast of the mainland of British Columbia, as well as to isolated mining centres in the interior; and finally the overland telegraph line from Ashcroft, B.C., to Dawson and other settlements in Yukon.

**Telegraph Systems.**—The Canadian telegraph systems are composed of lines owned by the Dominion Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world, and are operated under great climatic and geographical disadvantages.

\* Revised by G. S. Wrong, B.Sc., Chief of the Transportation and Public Utilities Branch, Dominion Bureau of Statistics. This Branch issues annual reports dealing with telegraph and telephone statistics.

## 1.—Statistics of All Canadian Telegraphs, 1933-44

NOTE.—Figures for the years 1920-30 will be found at p. 722 of the 1938 Year Book and for 1931-32 at p. 637 of the 1943-44 edition.

<sup>1</sup> Excludes commission operators.

<sup>2</sup> Excludes messages relayed to the United States.

<sup>3</sup> Re-

vised since the publication of the 1943 Year Book.

**Submarine Cables.**—Sixteen transoceanic cables have termini in Canada—fourteen of them on the Atlantic Coast and two on the Pacific. In addition, there are eight cables between Atlantic coastal stations in Canada and the United States. The year in which the cable was first demonstrated to be of commercial value was 1866, and up to the present its use has greatly increased. The Atlantic cables are controlled by English and United States interests. The Pacific cable, from Canada to Australia and New Zealand, has been in operation since 1902, and was owned by a partnership of the Governments of the United Kingdom, New Zealand, Australia and Canada. As a result of the recommendation of the Imperial Wireless and Cable Conference of 1928, in view of increased wireless competition, it was decided to dispose of the Pacific and West Indian Islands cable systems to the Imperial and International Communication Co., a company formed to take over all Empire-owned cables, and lease the Empire-owned beam wireless systems. The necessary legislation was passed by the United Kingdom in February, 1929, and by Canada in June, 1929.

## Section 2.—Telephones

A brief historical account of the early development of telephones in Canada is given at p. 781 of the 1934-35 Year Book.

### Subsection 1.—Systems and Equipment

**Telephone Systems.**—The 3,174 telephone systems existing in 1944 included the three large provincial systems in Manitoba, Saskatchewan and Alberta, and smaller governmental systems in Ontario, Quebec and New Brunswick, together with the system operated by the Dominion Department of Public Works and National Parks of Canada, Department of Mines and Resources. They also included 26 municipal systems, the largest operated by the cities of Edmonton, Fort William and Port Arthur. Of the 2,375 co-operative telephone companies no fewer than 1,123 were in Saskatchewan alone, 788 in Alberta and 212 in Nova Scotia. The largest among the 535 stock companies operating telephone systems in 1944 were the Bell Telephone Co., and the British Columbia Telephone Co. Over 59 p.c. of the total telephone investment in Canada belongs to the Bell Telephone Co., and their telephones in Quebec and Ontario constitute 56 p.c. of the total for Canada.

**Telephone Equipment.**—During the years 1934-44 there has been an increase of over half a million (554,894) in the number of telephones in use, representing an increase in telephones per 100 population of 31·5 p.c.

Of the 1,751,923 telephones in Canada in 1944, 989,103 or 56 p.c. were operated from automatic switchboards. The remainder were operated from manual switchboards. Automatic switchboards have completely displaced manual switchboards in the principal cities of the Prairie Provinces and are displacing them in the other provinces. The increase in automatic or dial telephones was greatly reduced in 1943 and 1944 due to shortage of material and labour.

## 2.—Mileages of Pole Line and Wire, and Telephones in Use, 1933-44

NOTE.—Figures for the years 1911-30 will be found at p. 724 of the 1938 Year Book and for 1931-32 at p. 639 of the 1943-44 edition.

<sup>1</sup> Includes telephones on rural exchange lines and urban exchange lines that have more than four parties.

The density of telephones in the different provinces is naturally influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.

## 3.—Telephones in Use, by Provinces, 1944

## Subsection 2.—Telephone Finances

Important trends for the telephone industry in Canada are indicated in Tables 4 and 5. There were setbacks in revenues, operating expenses, salaries and wages, etc., during the depression years, but these were not so marked as in most other branches of industry.

## 4.—Financial Statistics of Telephones in Canada, 1933-44

NOTE.—Figures for the year 1911-30 will be found at p. 725 of the 1933 Year Book and for 1931-32 at p. 640 of the 1943-44 edition.

<sup>1</sup> Includes wages charged to expenses and to capital.

<sup>2</sup> Statistics of Bell Telephone Co. in Quebec

and Ontario are included in Quebec.

<sup>3</sup> Excludes employees and wages for rural systems.

## Subsection 3.—Telephone Calls

Systems operating almost 90 p.c. of all telephones in Canada made estimates by actual count on days of normal business and, after adjustment for incompleting calls, holidays, Sundays, etc., the average was multiplied by 365. The long-distance calls in practically all cases were the actual long-distance calls put through or completed.

50871—45½

### 6.—Local and Long-Distance Calls and Averages per Telephone and per Capita, 1936-44

NOTE.—Statistics for 1928-35 are given at p. 718 of the 1939 Year Book.

Year	Local Calls	Long-Distance Calls	Total Calls	Total Calls per Capita <sup>1</sup>	Averages per Telephone		
					Local	Long-Distance	Total

<sup>1</sup> Per capita figures are based on official estimates of population given at p. 127.

## PART VII.—RADIO-COMMUNICATIONS

The Canada Year Book, 1945, at pp. 644-646, gives an outline of the development of administrative control over radio-communication in Canada.

### Section 1.—Administration

#### Subsection 1.—Technical Control and Licensing

All radio stations within the Dominion of Canada are required to be licensed, whether used for transmission or reception, or both. The issuance of all classes of licences, the assignment of call signs and frequencies, and the inspection and monitoring of radio stations in Canada is carried out by the personnel of the Radio Division. There were 85,896 radio stations of all classes inspected by departmental radio inspectors during 1945. Examinations for certificates of proficiency in radio are conducted by the inspection staff of the Radio Division. Certificates of all classes to the number of 12,713 were issued up to Mar. 31, 1945.

The Radio Regulations for ship stations issued under the Canada Shipping Act, 1934, lay down the specifications of radio equipment to be carried on certain classes of vessels, and also designate the qualifications of the operators required.

To ensure safety of life at sea, certain passenger steamers and cargo vessels, by international regulation, must carry radio equipment manned by competent operators holding certificates of proficiency in radio. The Department maintains a complete radio inspection service to enforce this regulation. Inspectors, located at major ports throughout the Dominion, are responsible for checking the efficiency of the radio equipment on ships calling at Canadian ports, regardless of their nationality, and for seeing that only competent operators are carried. Under the Canada Shipping Act, 1934, ships of foreign and Canadian registry, while in Canadian ports, are surveyed with a view to the issuance of safety certificates.

## 1.—Radio Stations in Operation in Canada, by Class, as at Mar. 31, 1941-45

<sup>1</sup> Includes licences issued free, numbering 8,375 in 1945, 7,896 in 1944, 7,465 in 1943, 6,998 in 1942, 6,796 in 1941, 5,862 in 1940 and 4,557 in 1939.

### Subsection 2.—Expenditures and Revenues of Radio Administration

Prior to Apr. 1, 1939, the licence fee for private commercial broadcasting stations was \$50. Since that date, however, the fee has been determined by the power of the station and the density of population within its service radius and varies from \$50 per annum in the case of low-power, short-wave, and non-commercial university stations, to \$10,000 per annum in the case of 50 kw. commercial stations.

### 3. Expenditures and Revenues of Radio Services, Department of Transport, Years Ended Mar. 31, 1942-45

Item	1942	1943	1944	1945
	\$	\$	\$	\$

Miscellaneous.....	Nil	1,428	2,309	31,744
<b>Totals, Revenues.....</b>	<b>3,778,576</b>	<b>4,032,029</b>	<b>4,171,278</b>	<b>4,208,851</b>

There are two classes of private receiving licences, one for battery-operated receivers (fee \$2 per annum), and the other for electrically operated receivers (fee \$2.50 per annum). Free licences are issued for crystal receiving sets and to blind persons, schools, hospitals and charitable institutions; also for receiving sets installed in barracks, mess-halls, canteens or recreational rooms for the gratuitous entertainment of members of naval, military or air forces and merchant seamen; and sets operated by persons whose names appear on the diplomatic list of the Department of External Affairs and consuls general of career as listed in the Annual Report of the Department of External Affairs.

Exact figures of revenues received from private receiving licences are not available by provinces. This is partly due to the fact that commissions paid for the issuance of licences vary according to the classification in which the issue falls, that is, post office, radio dealer, house-to-house vendor, etc. In Table 4, therefore, total revenue received from the sale of private receiving licences has been estimated according to the number of licences issued in each province.

#### 4.—Revenues from Private Receiving Licences Issued in Canada, by Provinces, Years Ended Mar. 31, 1939-45

NOTE.—The figures in this table are approximations only. Comparable figures for 1933-38 will be found at p. 722 of the 1940 Year Book.

#### Subsection 3.—Investigation and Suppression of Inductive Interference

Twenty-four cars equipped with sensitive apparatus for the investigation of interference to radio reception operate from permanent inspection offices located in 21 cities across the Dominion. The inspectors in charge of these cars interview broadcast listeners who have reported interference, and determine the actual source. Tests are then made to ascertain whether or not the interference can be suppressed effectively and economically. The owners of the interfering apparatus are advised of the results of the tests carried out and are given full information regarding the most effective means of suppressing or eliminating the interference.

The Radio Division has been co-operating with the Canadian Standards Association in drafting specifications on interference suppressors and measurements of radio interference, also on interference from street railways, power lines, motor-vehicles, low voltage apparatus, etc. The Headquarters Staff works closely with the Inspection Board of the United Kingdom and Canada, and the Department of National Defence on problems of interference caused by electrical equipment in military vehicles, aircraft and ships. Many special types of interference suppressors have been developed and have proven superior to those previously used.

## Section 2.—Operation of Radio-Communications

### Subsection 1.—Dominion Government Radio Stations

**Department of Transport, Marine Service.**—Four distinct networks of stations provide a complete radio aids-to-navigation service for ships. These networks serve the following areas: Great Lakes; Gulf of St. Lawrence and Atlantic Coast; Hudson Bay, Strait, and sub-Arctic; and Pacific Coast. The first three networks are interlocking. The Department of Transport maintains communication between Ottawa and the east and west coasts, and Hudson Bay and Strait by means of high-frequency stations.

During the fiscal year 1944-45, Government radiotelegraph stations on the east coast, west coast, the Great Lakes, and Hudson Bay and Strait handled 515,708 messages or 17,724,696 words, compared with 456,503 messages or 15,873,102 words handled during 1943-44.

#### 6.—Type of Service Performed and Areas Served by Marine Radio Stations, as at Mar. 31, 1945

Service Performed	Area Served				No. of Stations
	Great Lakes	Gulf of St. Lawrence and East Coast	Hudson Bay, Strait, and Sub-Arctic	Pacific Coast

**Department of Transport, Aeronautical Service.**—The radio services provided for aviation may be divided into two categories: first, those furnished on behalf of aircraft flying trans-Canada and Newfoundland routes; and secondly, those intended for aircraft flying transatlantic routes. This phase of radio in Canada is being rapidly developed. Aviation radio range stations now extend from coast to coast providing aid to air navigation for the Government-owned Trans-Canada Air Lines as well as for any other aircraft flying such routes.

During the fiscal year 1944-45 departmental airway radio stations handled 1,788,069 messages or 29,645,259 words, compared with 813,108 messages or 10,529,903 words during 1943-44.

**Department of National Defence.**—The Royal Canadian Corps of Signals operates, in addition to stations established for military purposes, 11 permanent stations and 2 summer stations situated along the Mackenzie River and in Yukon on behalf of the Department of Mines and Resources.

**Department of Public Works.**—Twelve stations are operated to provide emergency communication between the mainland and certain islands, and 9 stations to provide emergency links in existing landline circuits.

**Department of Mines and Resources.** This Department operates one private commercial station and one experimental station at the Dominion Observatory for the transmission of time signals, one receiving station at Halifax, N.S., and 30 private commercial stations in the National Parks of Canada, together with 1 other fixed private commercial station at Reindeer Station, N.W.T.

### **Subsection 2.—Provincial Government Radio Stations**

Provincial Governments operate radio stations as follows: Nova Scotia, 2; New Brunswick, 2; Quebec, 18; Ontario, 213 (including 12 aircraft stations); Manitoba, 27; Saskatchewan, 54; Alberta, 129; and British Columbia, 236, in addition to which the British Columbia Provincial Police Department operates 36 stations to provide communication between police headquarters and the various units of the force. The Police Departments of 73 municipalities throughout the Dominion also operate radio stations.

### **Subsection 3.—Privately Owned Commercial Stations**

From Table 1 it will be noted that there were 6 limited coast stations, 53 public commercial stations, and 1,420 private commercial stations in operation in the Dominion at Mar. 31, 1945. A public commercial station situated at Drummondville, Que., provides transoceanic radiotelegraph and radiotelephone services to the United Kingdom and Australia, and a radiotelephone service to Newfoundland. These stations are owned and operated by private individuals or companies.

The limited coast stations are, as a rule, privately owned and provide a ship-to-shore communication service with ships owned or operated by the licensees only. Two such stations are, however, owned and operated by the Canadian Marconi Company, one situated at Louisburg, N.S., providing a long-range radiotelegraph service to ships at sea, and the other situated at Drummondville, Que., providing a long-range radiotelephone service to ships at sea. The facilities of these two stations are open to the general public. The services performed by commercial stations, both public and private, are many and varied. These stations are located in areas not served by telephone, telegraph, or other means of telecommunication. The majority perform point-to-point radiotelegraph or radio telephone service. These stations provide an invaluable means of contact with mining camps, lumber mills, exploration and survey parties, trading posts, and many points that would otherwise be out of touch with current affairs.

Private commercial stations may be used only for the handling of messages relative to the private business of the licensee.

## **Section 3.—Program Broadcasting and Regulation under the Canadian Broadcasting Corporation\***

### **Subsection 1. Administration of the Canadian Broadcasting Corporation**

The Canadian Broadcasting Corporation succeeded the Canadian Radio Broadcasting Commission on Nov. 2, 1936. This—the first nationally owned and operated broadcasting corporation in North America—has done much to further the aim of providing as complete a service as possible to residents of every part of

\* Revised under the direction of the General Manager, Canadian Broadcasting Corporation.

Canada. The Corporation operates under the Canadian Broadcasting Act, 1936, which provides that the Corporation shall consist of a Board of nine Governors chosen to give representation to the principal geographical divisions of Canada. In practice, the Board of Governors determines and supervises policy, but actual administration and operations are under the direction of the General Manager. The by-laws of the Corporation approved by the Governor in Council provide a formula for general administration. The administrative organization of the CBC consists of the following Divisions: Executive, Personnel and Administration, Finance, Engineering, Program, Press and Information, Commercial, Broadcast Regulations, and Station Relations.

Under the Canadian Broadcasting Act, the CBC is charged with the responsibility of formulating regulations controlling the establishment and operation of networks, the character of any and all programs broadcast in Canada and the proportion of time that may be devoted to advertising in broadcast programs. The CBC's regulations were drawn up to ensure a certain standard in all broadcast programs. The CBC neither exercises, nor authorizes any private station to exercise on its behalf, censorship on any matter broadcast on the air. The responsibility of seeing that the regulations are observed rests with the station management.

### Subsection 2.—Operations

**Broadcasting Facilities.**—Under Sect. 24 of the Act, the CBC is required to review all applications for licences for new stations as well as applications for increases in power and changes in frequency or changes in location. Under these provisions, the licensing of extensions in broadcasting facilities involves two considerations: the first is non-interference with the present and proposed facilities of the CBC; and the second is that high-power transmission facilities, on both long- and short-wave bands, are reserved for use by the CBC. Within these limitations it is the policy of the Board to serve community interests by giving every practical encouragement and assistance to local stations.

CBC operates the Trans-Canada network, the Dominion network, and the French network in Quebec. The Trans-Canada network is made up of 24 stations; 7 CBC-owned and 17 privately owned. The Dominion network is made up of 29 basic stations of which 28 are privately owned. The French network has 3 basic stations all CBC-owned and 7 privately owned supplementary stations.

The Dominion network was inaugurated on Jan. 2, 1944, and provides alternative program service to listeners and also expanded distribution facilities for programs of national importance, together with a number of top-ranking sponsored shows.

The total power of CBC stations, which includes four 50,000-watt transmitters, is 218,100 watts and of the privately owned network stations, 56,200. In developing the extensive coverage of the CBC network, designed to serve as much of the Dominion as possible, the needs of the rural population are considered as well as those of the urban population. Quebec Province is equipped with both English and French outlets.

Subsidiary hookup broadcasting is controlled by the CBC, and all hookups must have the authorization of the Corporation. Contractual arrangements with stations for commercial hookups are handled by the Corporation's Commercial Division.

## 8.—Broadcasting Stations of CBC Networks, as at Mar. 31, 1946

(Basic Stations)

NOTE.—The stations marked with an asterisk (\*) are CBC owned.

<sup>1</sup> 5,000 watts during daytime; 1,000 watts at night.

<sup>2</sup> 1,000 watts during daytime; 250 watts at night.

**CBC International Service (Short-Wave).**—Canada's international short-wave broadcasting facilities (1946) employ seven languages: English, French, Czech, Dutch, German, Spanish and Portuguese, in regular transmissions to Europe, the West Indies, Central and South America. During the years 1946-47, it is planned to increase the number of geographical areas covered regularly and to institute transmissions to Australia, New Zealand and South Africa, and during the same period, to augment the number of languages used in European transmissions.

The CBC International Service transmitters are located at Sackville, N.B., while the Program and Administration headquarters are situated at Montreal, Que., with land lines linking the studios to the transmitter. Representatives are maintained in cities in Canada and a European Office is maintained at London, England.

Since its inauguration in February, 1945, the International Service has received many thousands of letters from listeners in all parts of the world testifying to the strength with which Canadian programs are received and to the interest they have aroused. Listeners receive, upon request, free illustrated monthly schedules giving details of programs and the times at which they may be received in all countries. Listeners' reception reports are also verified and inquiries on trade conditions, social, scientific and educational matters are given attention.

The two 50,000-watt transmitters employed by the International Service can operate in any of the international short-wave broadcasting bands. The frequencies used depend upon climatic conditions, the geographical areas served, the time of day and season.

**Program Service and Development.**—During the fiscal year ended Mar. 31, 1945, 54,962 programs representing 16,646:55 hours of broadcasting were presented on the respective CBC Trans-Canada, Dominion and French networks. Of the total broadcasting hours, 80.4 p.c. were devoted to non-commercial and public-service programs and the remaining 19.6 p.c. to commercial presentations. Of all broadcasting hours on the various networks, 17.7 p.c. were given on a national basis and heard simultaneously from coast to coast.

The figures in this section deal with network activities only; they do not include local commercial or non-commercial broadcasts by CBC or privately owned stations.

The Trans-Canada regional networks released 50.8 p.c. of all network broadcasting hours. This figure represents the total time consumed by regional networks in the presentation of regionally originated and delayed broadcasts. It is only through the presentation of programs on regional networks that the CBC is able to render to the different parts of Canada complete service on news bulletins, and institutional, educational and specialized programs at times when they coincide best with listening habits throughout the day. The fact that there are five time zones further complicates broadcasting problems.

Dominion network operations accounted for 6.2 p.c. of total hours of broadcasting or 1,042:15 hours. This small proportion is attributable to the fact that the Dominion network operates only during the evening hours. During the past year, the Dominion network operated on a daily average of 2:50 hours as compared with the Trans-Canada average daily operation of 28:30 hours, calculated on a time-consuming basis and including simultaneous multiple Trans-Canada network operations. Of the 1,042:15 total hours of Dominion network broadcasting, 517:40 were devoted to sustaining programs and 524:35 to commercial.

An interesting point to be noted in a comparison of Dominion network and Trans-Canada non-commercial service is that approximately two-thirds of Dominion non-commercial hours were scheduled nationally and one-third regionally, in contrast to Trans-Canada non-commercial service, where one-sixth was carried nationally and five-sixths regionally. One reason for this difference is that, since the Dominion network operates almost exclusively during peak evening hours, there is not the same need to set up regionalized networks to take care of school broadcasts, agricultural and other public-service programs designed for release at convenient times throughout the day in the five different time zones.

Of all non-commercial program hours 85 p.c. were originated by the CBC, 8.9 p.c. were broadcasts from United States networks and 6.1 p.c. from the BBC. Table 9 shows the proportion of total time devoted to sustaining as compared with commercial programs and analyses those directed to music as compared with the spoken word.

In order to give adequate service to French-speaking listeners, 26.6 p.c. of all sustaining program hours and 30.9 p.c. of commercial hours were devoted exclusively to the French network. These figures represent a total of 4,571:05 hours of broadcasting. In addition to the foregoing, the French network also carried 410:20 hours of non-commercial and commercial service from either the Trans-Canada or

Dominion networks. On the whole, the analysis of program categories of French network broadcasting is very similar to that on the English network, the main difference being the scheduling of a greater proportion of classical music and dramatic programs on the French network.

### 9.—Classification of CBC Programs, Year Ended Mar. 31, 1945

### Subsection 3.—Finances

Since its inception the Corporation's sources of income have not changed. Revenue from the sale of receiving and broadcasting licences increased each year until 1943-44. The slight decrease shown in 1944-45 is attributable to the shortage of zinc for batteries, radio tubes and receivers, etc. It has been recognized that there is a limit to the amount of revenue to be received from licence fees, and the saturation point under war conditions appears to have been reached in 1943-44. Commercial revenues showed an increase over the preceding year due to the operations of the Dominion network; this revenue was offset by corresponding expenditures.

The balance sheet of the Corporation, as at Mar. 31, 1945, showed a net operating deficit of \$72,747 for the fiscal year, after providing for depreciation and obsolescence at the rate of 2½ p.c. on buildings and 10 p.c. on equipment. During the year the fixed assets of the Corporation were increased by approximately \$255,000, and to finance these expenditures, working capital was reduced by approximately \$100,000 to \$1,034,934, the balance being provided out of current revenues. Capital developments during the year included the purchase and improvement of the property for the National Program Administration Building and Studios, now located at 354 Jarvis Street, Toronto, Ont.; purchase of technical equipment for the Engineering Headquarters, Montreal Studios; the International Service Studios in Montreal, Que.; CJBC transmitter at Dixie, Ont.; and CBA transmitter at Sackville, N.B. Improvements to leased properties, chiefly at International Service Studios, Crescent Street, Montreal, Que., and Palais Montcalm, Quebec, Que., amounted to \$105,000.

Operating costs in percentage terms for the past three years are:—

## PART VIII.—THE POST OFFICE

The Post Office Department, in addition to the several administrative branches at Ottawa, is divided into fifteen districts each in charge of a District Director or Superintendent of Postal Service. The territory it serves is more extensive in area than that of any other country excepting the U.S.S.R. or the United States, and has a relatively small population compared with the vast area served. Its railway mail service is one of the largest in the world—the rural mail delivery service operates over 4,000 rural mail routes—and its air-mail system supplies a widely scattered population with speedy and efficient postal service.

A brief account of the development of postal services in Canada is given at pp. 789-790 of the 1934-35 Year Book.

### Section 1.—The Wartime Growth and Accomplishments of the Post Office\*

The impact of war made sweeping changes in the daily life of Canadians. The upheaval in the manufacturing and business life of Canada was unprecedented. As an institution serving both individuals and commercial enterprises of the country, the Canada Post Office experienced its full share of these disturbances. The increased use of the mails by Dominion and Provincial Governments and by business generally, coupled with a corollary increase in private mail, plus the vast volume of military mail to and from the Armed Forces within Canada and overseas, presented problems requiring the application of utmost ingenuity and energy.

Some idea of the expansion of Post Office activities may be found in a consideration of the figures showing the increase in gross postal revenues during the past few years. These revenues increased from \$42,896,179 in the year ended Mar. 31, 1939, to \$55,477,159 in 1942 and approximately \$79,533,903 in 1945. During the six-year period, gross postal revenues showed an increase of more than 85 p.c. While gross revenues measure the relative volume of business paid for by the public, they give no clue to the vast expansion the War of 1939-45 brought about, in franked government and in military mail.

The increase in operations was handled in spite of serious loss of experienced personnel, for, like all other services and businesses, the Post Office suffered from depletion of staff due to enlistments, necessitating the training of inexperienced help.

In addition to the normal postal services of peacetime, the services imposed by the War or introduced between 1939 and 1945 may be included under two main headings: (1) Services in co-operation with the Government; and (2) Military mail. The first group included such services as national registration and many types of war service and civilian registration; sale of unemployment insurance stamps and distribution of income-tax forms; distribution of ration books and gasoline ration forms; war savings stamps and war savings certificates; collection of magazines and books for the Services, rubber salvage, etc. The second group included the vast quantities of military mail that passed through the Post Office—free letters to Canada from the Armed Forces; special low rates on parcels to the Services overseas; free mail to prisoners of war; Canadian mail to the Armed Forces overseas and the Armed Forces in Canada; the airgraph and the Canada Air Letter, etc.

\* Prepared under the direction of the Postmaster General by B. J. Farrell, Acting Director, Public Relations Board.

**Air Mail.**—With the emphasis to-day placed on the need for speed, the air-mail service of Canada is a mighty asset. Stretching from St. John's, Newfoundland, to Victoria, B.C., it covers a route of 3,900 miles and connects with feeder lines running north and south, and makes connections with air lines reaching foreign countries. Its advantages are used by Government Departments, commercial firms, and private citizens alike. The use of air mail has increased enormously over the main Trans-Canada lines alone—excluding those which serve the vast hinterland. During May, 1945, 327,979 lb. of air mail were carried as compared with 316,752 lb. in May, 1944, 315,452 lb. in May, 1943, and 164,655 lb. in May, 1942.

Transatlantic air-mail service over the northern route from Canada to the United Kingdom proved a great boon to citizens of both countries during the war years and its permanent establishment as a regular postal service has followed the end of hostilities. In the early summer of 1944, Transatlantic air-mail service from Canada to the United Kingdom was greatly improved, with several trips in operation weekly.

**Airgraph.**—One of the adaptations of the air mail to war conditions was the airgraph. Inaugurated in Canada in 1941, airgraph messages were written on special forms obtainable at any post office without cost. The forms, when mailed, were flown to Toronto and photographed on rolls of microfilm which were carried by air to England; there photographic enlargements were made, placed in envelopes and forwarded. Airgraph saved not only time, but vital cargo space; one mail bag which holds 2,400 ordinary letters will carry 408,000 airgraph messages on microfilm.

The airgraph postage fee was reduced several times to benefit the Armed Forces and their correspondents and airgraph was placed on a two-way basis between the United Kingdom and Canada. Later the service was extended for civilian correspondence in the United Kingdom and many overseas lands. Having fulfilled its purpose, airgraph service was discontinued in July, 1945.

**The Canada Air Letter.**—Eight months after the adoption of the airgraph, the blue Canada lightweight air letter was introduced in July, 1942, to provide a fast and economical method for communicating by air with members of the Armed Forces on duty in any part of the world. The facility consists of a combined letter-and-envelope form obtainable free at all Post Offices. The postage rate is 10 cents and the air letter may now be used for civilian correspondence to the United Kingdom. From the time the service was instituted in 1942 to the end of 1945, some 57,000,000 air letters were mailed.

**The Organization of the Military Mails, 1939-45.**—It was in the handling of military mails that the Post Office displayed the greatest ingenuity and ability. While this was a key wartime function because the receipt of letters and parcels from home, smoothly and regularly, was indispensable in maintaining the morale of the Armed Forces, it was one of extreme difficulty owing to the constant movement and transfer of troops.

The postal needs of those in uniform were ably handled by the Canadian Postal Corps, recruited largely from executives and postal personnel serving overseas or in Canada. The centre of operations in Canada was the Base Post Office, which

despatched the mail to the men overseas. The volumes of letters, tobacco gifts and parcels that passed through the Base Post Office for members of the Armed Forces abroad during the years 1940, 1943, 1944 and 1945 were as follows:—

	1940	1943	1944	1945
Letters.....No.	5,618,640	31,500,000	60,051,000	53,116,775
Tobacco gifts.....lb.	—	6,250,167	5,379,000	569,022
Tobacco labels.....No.	—	—	2,424,000	7,762,400
Parcels.....No.	954,275	3,921,866	5,549,000	3,228,127

In addition, nearly one million pounds of news passed through the Post Office each year.

To shorten the time of delivery of letters to the Armed Forces, the Postmaster General in conjunction with the Minister of National Defence and the Minister of National Defence for Air, shared in arrangements that resulted in the creation of an R.C.A.F. Air Transport Squadron to operate a supplementary mail service from Canada to the United Kingdom, the Mediterranean area and return. Later, air-mail service operated regularly between the United Kingdom and the Canadian Forces in northwestern Europe. Thousands of pounds of ordinary mail were carried by air which would otherwise have been despatched by surface—though, naturally, not all ordinary surface mail could be carried by this means.

*Special Tobacco-Handling System.*—Realizing that “smokes” played an important role in sustaining the morale of the Armed Forces overseas the greatest care was given to ensure the safe delivery of gift parcels of cigarettes and tobacco. Early in the War a system that was virtually hand-to-hand registration was instituted for gift-parcels of tobacco ordered from tobacco companies in Canada for the men on service overseas. At the Base Post Office the tobacco parcels were checked and listed as they came in, and the parcels then sorted into the bags of their respective units. Before each bag was despatched the contents were taken out and checked against a list that was placed in the bag before being sealed. Each bag was signed for on entering and leaving the custody of the postal service and the unit Post Orderly obtained the signature of the addressee on delivery of every parcel. Despite all hazards, including loss, theft, fire and sinking of ships by enemy action, only a very small percentage of the parcels sent overseas were undelivered.

*Tobacco Label System.*—To further safeguard gifts of cigarettes, a new system was inaugurated in the early summer of 1944, first to the Forces in Italy, and later to the United Kingdom and northwestern Europe. Huge reserves of cigarettes were established at tobacco depots set up overseas by bulk shipments from Canada. Instead of mailing individual parcels on receipt of each order, the tobacco companies prepared address labels, which were flown to the overseas tobacco depot where the order was promptly filled. If the original label were lost a duplicate was forwarded.

*Canadian Army Priority Casualty Postcard.*—To expedite mail to casualties in hospital overseas, a Canadian Army Priority Casualty Postcard was designed to be filled in on the man's entry to hospital asking correspondents to add “in hospital” to the usual unit address. It was carried free by air to Canada. Letters from Canada marked “in hospital” received priority treatment at the Base Post Office and were routed direct to Records overseas, and forwarded as quickly as possible.

**Economic Waste of Dead Letters.**—In 1945 alone, over 724,000 domestic letters, and well over a million domestic postcards, circulars, parcels and other mailings reached the Dead Letter Office. The cash in the letters amounted to \$20,883. This, together with the cost of executive and clerical time used in preparing, handling and transporting of this mail, amounted to a very serious loss and might easily have been avoided if the rule of giving a return address on the envelope or wrapper had been better observed by the public.

## Section 2.—Post Office Statistics

The conveyance of mail by land, water, and air entailed a total expenditure of \$27,314,031 during the fiscal year ended 1944; railway carriage cost \$8,167,167, land transportation \$8,423,526, conveyance by steamship \$2,707,976, and conveyance by air \$8,015,362. These amounts were paid solely for services rendered as carriers. Special subsidies are granted to assure the maintenance of certain steamship services. Since these subsidized services provide transportation for passengers and freight as well as for mail, these subsidies are included with other expenditures on water transportation given at pp. 685-686.

1936.....	32,507,888	30,100,102	+2,407,786				

<sup>1</sup> Exclusive of commissions and allowances to postmasters and some other smaller items. The gross revenue in the fiscal year 1938 was \$42,998,349; in 1939, \$42,896,175; in 1940, \$44,208,369; in 1941, \$48,143,410; in 1942, \$55,477,159; in 1943, \$59,175,138; in 1944, \$73,004,399; and in 1945, \$79,533,903.

**Postage.**—The net revenue receipts shown in Table 3 are received mainly in the form of postage. This is indicated by the following figures:—

The gross value of the postage stamps, post cards, etc., sold during each of the latest nine fiscal years, was: \$28,179,323 in 1937, \$28,808,513 in 1938, \$28,836,457 in 1939, \$29,530,247 in 1940, \$31,425,593 in 1941, \$35,716,908 in 1942, \$38,959,795 in 1943, \$50,062,214 in 1944 and \$53,250,630 in 1945. Receipts from postage paid in cash were as follows: \$10,203,389 in 1937, \$10,865,895 in 1938, \$11,065,527 in 1939, \$11,792,311 in 1940, \$13,459,526 in 1941, \$15,777,816 in 1942, \$16,057,366 in 1943, \$18,728,050 in 1944 and \$20,498,106 in 1945.

**Auxiliary Services.**—The auxiliary postal services include the issuing of money orders (including postal notes) and the facilities offered by the Post Office Savings Bank. In 1868, there were 515 money-order offices in operation, issuing orders to an amount of \$3,342,574; the following tables show the magnitude of

operations in recent years. Statistical tables showing deposits with the Government Savings Banks and the business of the Post Office Savings Bank are included in the chapter on Currency and Banking (Chapter XXV).

#### 4.—Operations of the Money-Order System in Canada, Years Ended Mar. 31, 1937-45

NOTE.—For figures for 1868-1900, see the 1911 Year Book, p. 289; for 1901-31, the 1932 edition, p. 622; and for 1932-36, p. 666 of the 1942 edition.

## PART IX.—THE PRESS

The Dominion Bureau of Statistics does not collect statistics regarding the circulation of newspapers and periodicals in Canada, but certain figures, compiled from *McKim's Directory of Canadian Publications*, have been published in former editions of the Year Book. As the publication of that Directory was suspended for the duration of the War, no later figures are available than those for 1941. Circulations of such publications in cities of 20,000 population or over in 1941 and the circulations of French language publications by provinces in 1940 and 1941 are given at pp. 659-660 of the 1943-44 Year Book. A table at p. 669 of the 1942 Year Book enumerates the periodical publications in Canada by frequency of issue and Tables 1 and 2 at p. 749 of the Year Book gives the circulation of the daily, semi-weekly and weekly English and French papers by provinces, for 1941.

A special article on the Democratic Functioning of the Press appears at pp. 744-746 of the 1945 Year Book.

## Section 1.—The Government in Relation to Labour

### Subsection 1.—The Dominion Department of Labour

The Department of Labour of the Dominion Government was established in 1900 to administer the Conciliation Act which was designed to aid in preventing or settling disputes, to enforce the Government's fair-wages policy for the protection of workmen employed on Dominion Government contracts and on works aided by grants of public funds, and to collect, compile and publish statistical and other labour information.

At the present time, the Minister is responsible for the administration of the following: Conciliation and Labour Act; the Fair-Wages Policy; Fair Wages and Hours of Labour Act; Government Annuities Act; Vocational Training Co-ordination Act, 1942; Unemployment Insurance Act, 1940; Reinstatement in Civil Employment Act, 1942; and certain wartime regulations (made under authority of the War Measures Act, 1917) including the Wartime Wages Control Order, the Wartime Labour Relations Regulations and certain provisions of the National Selective Service Regulations which have not yet been revoked.

The Wages Order and the Labour Relations Order are administered by the War Labour Board and the Wartime Labour Relations Board, respectively. While the Labour Relations Regulations, 1944, remain in effect, the operation of the Industrial Disputes Investigation Act is suspended. Information concerning this Act, enacted first in 1907, and its extension to war industries may be found in earlier Year Books.

**Fair-Wages Policy.**—Wages and hours for work on contracts for the manufacture of equipment and supplies for the Dominion Government and for construction were governed for some years by a Resolution of the House of Commons (1900) which was later incorporated in an Order in Council and amended from time to time.

\* Except as otherwise indicated, the material in this Chapter has been prepared or revised under the direction of A. MacNamara, C.M.G., Deputy Minister of Labour, Ottawa.

Contracts for construction are now regulated under the Fair Wages and Hours of Labour Act, 1935, and to some extent, by an Order in Council of June 7, 1922, as amended Apr. 9, 1924. Hours on such work are limited to 8 per day and 44 per week except in an emergency or when declared exempt by Order in Council and the wages to be paid are those current for the type of work in the district concerned, or, if there are no current rates, fair and reasonable ones as determined by the Minister.

Wages and hours for work on contracts for equipment and supplies are regulated by the Order in Council of 1922 as amended on Dec. 31, 1934, and on Oct. 4, 1941. The hours on such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable and may not in any case be less than 35 cents and 25 cents per hour, respectively, for men and women over 18 years of age. Lower minimum rates are fixed for workers under 18 years of age and for learners. In both construction and supplies contracts, the term "current wages" and in the latter contracts, the term "hours fixed by the custom of the trade" mean the standard conditions fixed by agreement between employers and unions or, failing agreements, the actual conditions prevailing.

**Wartime Control of Wages.**—This policy is part of the Government's general anti-inflationary program and was adopted first in 1940 as an advisory policy. In October, 1941, it was made mandatory. As revised from time to time, the policy is set out in the Wartime Wages Control Order (Order in Council P.C. 9384, Dec. 9, 1943, as amended). Wage rates are stabilized at the level in effect on Nov. 15, 1941, but the cost-of-living bonuses payable under the previous Orders were added to and form part of the basic wage rates. The Administrative Boards are empowered by P.C. 348 of Jan. 31, 1945, to raise rates to the levels prevailing for the same or comparable occupations in the same or comparable localities. On June 30, 1946, the restrictions imposed, in effect, by the Wages Order on the provincial regulation of minimum wages, hours of work and holidays with pay will be removed.

A National War Labour Board and nine Regional War Labour Boards administer the Order. The National Board, of three members, has an advisory committee of employers' and workers' representatives. The Provincial Ministers of Labour are the chairmen of the Regional Boards and the members represent employers and workers. To ensure uniformity of interpretation, the National Board may review decisions of the Regional Boards and, after notice, may vary or revoke any decision. The inspection staffs of the Unemployment Insurance Commission and of the Provincial Departments are used for enforcement purposes.

**Wartime Labour Relations Regulations.**—Like the regulations stabilizing the wage level, the Dominion regulations to promote collective bargaining and to settle labour disputes deal with subjects that, in large part, are normally within provincial jurisdiction. There is, therefore, considerable co-operation between the Dominion and the provinces in making them effective.

The Labour Relations Regulations (P.C. 1003) of Feb. 17, 1944, have as their main principles compulsory collective bargaining, compulsory arbitration of disputes concerning matters arising out of a collective agreement if not settled in accordance with procedure set out in the agreement, and compulsory investigation of other disputes. The Industrial Disputes Investigation Act is suspended while the Regulations are in force. The Regulations are administered by the Wartime Labour Relations Board consisting of a chairman, a vice-chairman and four repre-

sentatives each of employers and trade unions. The National Board is assisted, in some provinces, by Provincial Boards. An appeal to the National Board may be taken from a decision of a Provincial Board.

An employer or employers must negotiate with the representatives of a trade union or employees' association which has as members a majority of the employees of such employer or employers or a majority of the employees in a unit appropriate for bargaining. When there is a dispute as to the extent of the membership or the choice of bargaining representative, the latter must be certified by the Board. If an agreement is not reached by the parties within 30 days, a conciliation officer or Board may be appointed by the Minister. There may be no stoppage of work due to a dispute until 14 days after a conciliation board has reported to the Minister. Disputes arising from the interpretation or violation of a collective agreement must be settled through the machinery provided by the agreement or, lacking such machinery, by arbitration arranged by the Labour Relations Board. Discrimination against trade union members is an offence.

These Regulations apply: (a) to transport and communication agencies extending beyond the limits of any one province and to works declared by Parliament to be for the general advantage of Canada; (b) by authority of the War Measures Act, to industries essential to the prosecution of the War; (c) if a Provincial Legislature so enacts, to other industries. By agreement between the Dominion and the provinces, Provincial Boards, except in Alberta and Prince Edward Island, administer the Regulations as they affect the industries in (b). By enabling legislation, British Columbia, Manitoba, Ontario, New Brunswick and Nova Scotia have applied the Regulations to the industries in (c).

Up to Mar. 1, 1946, the National Board had certified representatives in 203 cases, rejecting 40. The Provincial Boards had issued 2,108 certificates and rejected 286.

Conciliation services may be utilized in disputes over the terms of an agreement under the Regulations. In other disputes, such services are available under the Conciliation and Labour Act.

Under the Regulations, between Mar. 20, 1944, and Mar. 1, 1946, of 292 cases where conciliation was used, 97 were settled by Conciliation Officers and 75 by Conciliation Boards. In 38 cases no agreement was reached following a Board's report. Other cases are still pending.

### **Subsection 2.—Provincial Labour Departments**

Labour legislation in Canada is, for the most part, a matter for the Provincial Legislatures since it usually governs, in some respect, the contract of service between employer and employee or regulates conditions in local work-places. The right to contract is a civil right and the British North America Act, which distributes legislative powers between the Parliament of Canada and the Provincial Legislatures, grants to the provinces power to enact laws in relation to "civil rights" and, with certain exceptions, "local works and undertakings".

In each province, except Prince Edward Island, a special Department or Bureau is charged with the administration of labour laws. In Alberta the Board of Industrial Relations under the Minister of Trade and Industry administers statutes concerning wages and hours and the Department of Public Works, factory legislation. Other provinces have Departments of Labour. Legislation for the protection of miners is administered by Departments dealing with mines.

Factory legislation in eight provinces, and shops legislation in several provinces prohibit child labour, regulate the hours of women and young persons, and provide for safety and health. Other labour statutes in most provinces include minimum-wage legislation and maximum-hours laws, laws for the settlement of industrial disputes, legislation to ensure freedom of association and promote collective bargaining, and laws to provide for apprenticeship and the licensing of certain classes of workmen. The Industrial Standards Acts in Alberta, Saskatchewan, Ontario, New Brunswick and Nova Scotia, and the Fair Wage Act in Manitoba enable the wages and hours of work agreed upon by representatives of employers and employed to be made legal throughout the industry concerned. The Quebec Collective Agreement Act permits agreements between employers and trade unions to be made binding on all in the industry. Workmen's compensation laws in all provinces, except Prince Edward Island, are administered by independent boards.

For information regarding individual Provincial Departments of Labour reference should be made to the annual reports of the Departments concerned or to the Deputy Ministers of Labour of the Provincial Governments.

### Subsection 3.—Provincial Labour Legislation in 1945

**Prince Edward Island.**—The *Trade Union Act* requires an employer to negotiate with the trade union chosen by the majority of his employees who are eligible for membership in such a union, provides for freedom from interference by an employer with a trade union, requires unions to file copies of rules and by-laws and to make financial returns to the Government, and stipulates that employers must institute a check-off system for union fees under certain conditions.

The Prince Edward Island *Minimum Age for Industrial Employment (International Labour Convention) Act* implements the *Minimum Age (Industry) Convention (Revised)* which was adopted by the International Labour Conference at Geneva in June, 1937. This Act, which is the first provincial statute to give full effect to an International Labour Convention, forbids employment of a child under the age of 15 years in any industrial undertaking, including mines, quarries, factories, construction and transport by road, rail or inland waterway. It enables the fixing by Order in Council of a higher age for admission of persons under 18 years to dangerous employments. Similar legislation in other provinces would enable the Dominion Government to ratify this Convention. The Act provides for an annual report on the operation of the Act to be forwarded to the Dominion Government in case the Convention is ratified by the Government.

**Nova Scotia.**—The *Male Minimum Wage Act*, which will come into force on proclamation, applies to all male employees except farm workers and domestic servants. It authorizes the Board of Industrial Relations, which is to be set up to administer it, to make Orders fixing minimum rates of wages for a specified number of hours for any class or classes of workers and for the whole Province or for any part of it. Special rates may be established for overtime and part-time and for handicapped workers.

Amendments to the *Workmen's Compensation Act* increase minimum weekly compensation in total disability cases from \$10 to \$12.50, or average earnings if less than \$12.50; raise the maximum amount of average earnings on which compensation is based from \$1,500 to \$2,000 a year; and add to the occupational diseases for which compensation is payable, silicosis arising in stone-quarrying, grinding or polishing or metal-grinding or polishing.

New provisions concerning the inspection of machinery, storage and use of explosives, and ventilating fans, were added to the *Coal Mines Regulation Act*.

The *Tradesmen's Qualification Act*, which will come into force on proclamation, enables the Lieutenant-Governor in Council to prohibit any person engaging in a trade designated under the Act unless he has a valid certificate.

**New Brunswick.**—The *Labour Relations Act*, to come into force on proclamation, deals with collective bargaining and conciliation in industrial disputes. The *Labour and Industrial Relations Act, 1938*, is repealed by a separate statute which is also to come into force on proclamation. The new Act, which is similar to the Dominion Wartime Labour Relations Regulations (P.C. 1003), Feb. 17, 1944, requires the employer to negotiate in good faith and make every reasonable effort to conclude an agreement with the properly chosen representatives of his employees who are certified by the Labour Relations Board to be appointed under the Act. Provision is made for conciliation officers and boards to try to settle disputes and a strike or lockout is prohibited until 14 days after a board has reported to the Minister. Employers are forbidden to dominate or interfere with a trade union or employees' organization or to discriminate against any person for membership in such a union or organization.

The *Minimum Wage Act*, which is to come into force on proclamation and is similar to the legislation in other provinces, applies to all persons employed in any trade, industry or business, except officers and persons employed in a confidential capacity, persons employed by or under the Crown, and agricultural and domestic workers. A Minimum Wage Board of three or more members, on which employers and employees are to be equally represented, is to have power to investigate wages, hours and labour conditions in any trade and to make orders fixing, for any class or classes of workers and for any part or for the entire province, minimum rates and the maximum hours for which such rates are to be paid, also overtime rates and rates for learners, part-time employees and handicapped workers. The Act, unlike those of the other provinces, makes the Board's orders subject to review by the Minister.

**Quebec.**—The *Apprenticeship Assistance Act* differs from the Apprenticeship Acts of other provinces in providing for the establishment of local apprenticeship centres and the setting up of a local commission to administer one or more of the apprenticeship schemes within each area. Upon application by an employers' association and by a wage earners' association or by a joint committee under the *Collective Agreement Act*, the Lieutenant-Governor in Council, on the recommendation of the Minister of Labour, may recognize any municipality as an apprenticeship centre, either generally or for one or more industries. Upon petition of 10 or more persons, an apprenticeship commission may be incorporated by the Lieutenant-Governor in Council. Any person, association, professional syndicate or joint committee under the *Collective Agreement Act* may be a member of an apprenticeship commission and the Minister of Labour, the Provincial Secretary and the Minister of Health and Social Welfare are members of every such commission. Provision is made for co-operation among various agencies to facilitate apprenticeship of those injured in industry or war and also the handicapped and to train or re-train such persons for employment. A commission may provide courses for apprenticeship and for training, may determine apprenticeship conditions, establish special conditions for any injured or infirm person or for any member of the Armed

Forces possessing special aptitudes. Municipal and school corporations, with the approval of the Lieutenant-Governor in Council, on recommendation of the Minister of Labour, and also employers' associations, professional syndicates and joint committees may grant subsidies to apprenticeship commissions. The Workmen's Compensation and Minimum Wage Commissions may also give financial assistance for training injured workmen. The Government may authorize the Minister to make agreements with the Dominion Government and any governmental institution to further the rehabilitation of members of the Armed Forces.

Another statute enables an agreement to be made by the Province with the Dominion Government for the training of young persons, and with any person, firm or institution, to provide training for young people.

The *Labour Relations Act, 1944*, was amended to require an employer to negotiate for an agreement with the representatives of the employees' association of which the majority, instead of 60 p.c., of his employees are members.

Amendments to the *Workmen's Compensation Act*, raise the minimum weekly compensation in total disability cases from \$12.50 to \$15 and increase the amount payable for burial expenses from \$125 to \$175.

The *Pipe-Mechanics Act*, as amended, requires plumbing contractors, journeymen and apprentices to be licensed, if they do business or work in a municipality with a population of more than 5,000, instead of 10,000 as formerly. This provision, as before, applies to smaller municipalities if the work concerns heating or refrigerating systems, mechanical sprayers for fire-fighting, and plumbing systems in public buildings or industrial establishments.

**Ontario.**—The *Fire-Departments Act* was amended to enable any municipality to adopt the three-platoon system of eight hours on duty and sixteen hours off for each platoon, the platoons to rotate in their periods of duty or time off as may be arranged for changing shifts every seven days. Nothing in the Act prohibits a municipality from granting more than one day off duty in every calendar week.

**Manitoba.**—Amendments to the *Workmen's Compensation Act* raise the monthly benefits to a widow from \$40 to \$45 a month, provide for payment of a lump sum of \$100 to a widow or foster-mother in addition to other compensation and for an extra payment not exceeding \$100 to cover cost of transporting the body of a workman who is killed at a distance from his place of residence. If an injury disables a workman for more than 14 days, compensation is payable from the date of disability. The Board was authorized: to pay the cost of repairing or replacing artificial limbs broken by accident during employment and of repairing or replacing eye-glasses broken in an accident which entitles a workman to compensation or medical aid; to admit within the scope of the Act permanent full-time employees engaged in the maintenance of an apartment block, on application of a majority of such employees; and to permit compensation to be paid to workers in industries in which the Board considers them liable to dermatitis. The section prohibiting an action by a workman or his legal representative against his employer or against another employer under Part I of the Act was amended to bar an action by a workman against a workman of another employer under Part I unless the accident occurred otherwise than in operations usual in or incidental to the employer's industry. Where an accident is due in part to the negligence of an employer or his workman in another class, compensation costs are to be apportioned between the classes.

**Saskatchewan.**—Amendments to the *Workmen's Compensation Act* provide that where disability lasts longer than three days compensation is to be paid from the date of the accident; increase compensation for disability from 66½ p.c. to 75 p.c. of average earnings or, in the case of partial disability, of the diminution of average earnings, with a minimum in total disability cases of \$15 a week or average earnings, if less; and raise from \$2,000 to \$2,500 a year the amount of average earnings to be taken into account in computing compensation. The increase in benefits applies to all payments made after July 1, 1945, whether the accident occurred before or after that date. Compensation must be awarded on the basis of a workman's earnings at the time of the accident if those are higher than his average over the preceding twelve months. The Lieutenant-Governor in Council is to appoint at least once in four years, a committee of five or more members to report on the Act, the committee to represent employers and organized employees equally and to have on it one or more representatives of the Board.

Changes were also made in the *Workmen's Compensation Act, 1911*, under which the employer is individually liable and which applies to certain classes of workers, chiefly railway workers, who are not covered by the Workmen's Compensation (Accident Fund) Act. Any railway worker of a class excluded from the later statute is deemed to be under the 1911 Act, whether or not his remuneration exceeds \$3,500 a year. The employer is not liable for compensation if the workman is not disabled for at least three days. The time-limit for bringing an action under the Act was extended from six months to one year. The maximum compensation recoverable is either the equivalent of the estimated earnings of a workman in similar employment during the three years preceding the injury or the sum of \$2,500, whichever is greater, but in no case exceeding \$3,000.

The *Blind Workmen's Compensation Act*, which is similar to Acts in Ontario, Quebec and Nova Scotia, authorizes the Provincial Government to reimburse the Workmen's Compensation Board, or the employer if liable, for any compensation in excess of \$50 paid to a blind workman, provided his employment is approved by the Canadian National Institute for the Blind or other organization designated for the purpose.

Amendments to the *Minimum Wage Act* include a revision of the section dealing with orders of the Board. Such orders may: define classes of employment; subject to the Factories Act, determine the number of hours which shall constitute the normal work-week of workers in any class of employment; fix the minimum wage for the normal week and for overtime and short-time and the period in any day within which the hours of work shall be confined; and fix the minimum age for employment. Where an employer convicted of paying less than the minimum wage is ordered to pay the difference, he must pay it to the Deputy Minister of Labour for the employee instead of directly to the latter.

The *Attachment of Debts Act* was amended to exclude persons employed by the hour from the provisions of the section enabling the Provincial Government to be garnisheed with regard to moneys due or accruing to any member of the public service or any person temporarily employed under the Public Service Act. The amount of wages or salary exempt from garnishment was raised from \$75 to \$100 in the case of a married person or a person with dependents, and from \$40 to \$60 for persons without dependents and in cases where the garnishee order is issued under a judgment or order for alimony or a judgment founded upon a separation agreement.

Workers employed by reason of an emergency requiring immediate action are now excluded from the *One Day's Rest in Seven Act* and the exemption formerly granted to any class of hotel and restaurant employees when there were only two of that class was cancelled.

**Alberta.**—Changes in the *Industrial Conciliation and Arbitration Act* enable disputes as to the bargaining agent to be referred to arbitration, extend from 14 to 21 days the time for the Board of Industrial Relations to report on a dispute, and provide for a vote to be taken on questions of employer-employee relations. A "slow-down" or other activity to restrict production is forbidden but this provision is not to limit a trade union's legal right to strike.

The *Hours of Work Act* was amended to limit hours of male employees to 8 per day and 48 per week instead of 9 and 54, and to delete, as unnecessary, the definition of "overtime" which is now defined in both the *Male and Female Minimum Wage Acts* to mean all time worked in excess of nine hours a day or of any fewer hours prescribed under the Hours of Work Act or time worked in excess of 48 hours a week or of any fewer hours prescribed under the Hours of Work Act. An action under the Male or Female Minimum Wage Act by an employee paid less than the minimum wage to recover the difference must be brought within twelve months after the cause of action accrued.

The *Coal Mines Regulation Act*, which repeals the Mines Act, is a revision of the latter statute with some changes. The minimum age for employment of men in charge of or operating an engine, windlass or gin, or machinery and tackle connected with it used for conveying persons has been lowered from 21 to 19 years but a hoisting engineer in charge of a hoisting shaft must be at least 21 years of age. There is only one class of miner's certificate, with qualifications similar to those of the former class A certificate, including the minimum age of 20 years. A number of safety provisions were added.

The *Billiard Room Act*, which forbade employment in a billiard room of persons under 18, was amended to provide that, during the War of 1939-45, boys and girls between the ages of 16 and 18 might be employed to set up pins in a bowling alley, provided they had the written consent of their parent or guardian.

**British Columbia.**—The *Fire Departments Hours of Labour Act* was amended to limit the hours on duty in any one week to 48 or an average of 48 hours when computed over a number of weeks. Where the *Fire Departments Two-Platoon Act* applies, however, it must be complied with. These changes will come into effect at the end of one year after the termination of the War, unless proclaimed in force earlier.

A section added to the *Small Debts Courts Act*, which provides for attachment of debts and exempts from attachment wages up to \$60 in the case of a person with dependents and \$30 in other cases, provides that debts liable to attachment shall include wages or salary due or payable within four days after the day on which an affidavit is sworn.

**Yukon.**—The *Ordinance to Regulate the Hours of Labour and the Minimum Wage to be Paid in Mining Operations* now applies to skilled or unskilled manual, clerical or technical workers, but not to those employed in a confidential capacity or those having authority to employ or discharge workers. As formerly, daily hours of work may not exceed eight, but the weekly maximum for a seven-day week has

been reduced from 56 to 48 hours. Overtime work, which is permitted for employees not working underground in a shaft or tunnel, is to be paid at time and one-half. The provision for a minimum wage of 50 cents an hour was repealed.

## Section 2.—Occupations of the Gainfully Occupied Population

A special review of occupations of the Canadian people, based on final figures from the 1941 Census, will be found at pp. 1062-1073 of the 1943-44 Year Book and further information at pp. 1168-1169 of the 1945 edition.

## Section 3.—Employment and Unemployment

### Subsection 1.—Employment and Unemployment Statistics of the Census

Preliminary figures of unemployment as at June 1, 1941, will be found in Bulletin U-1 of the 1941 Census. Preliminary data of earnings and employment during the census year will be found in Bulletins E-2 and E-3 of the Census; these data are subdivided by counties or census divisions.

### Subsection 2.—Employment and Payrolls as Reported by Employers\*

The Dominion Bureau of Statistics since 1921 has made monthly surveys of employment in the major industrial divisions, excluding agriculture, domestic and personal services (such as education, health services, etc.), and government administration, data being available for a lengthy period for the following broad industrial groups: manufacturing, logging, mining, communications, transportation construction and maintenance, services (chiefly hotels and restaurants, laundries and dry-cleaning plants), trade and finance. From the spring of 1941, a record of current payrolls was established, and more recently (i.e., in the late autumn of 1944), the statistics of employment and payrolls have been supplemented by monthly data on man-hours and hourly earnings.

For practical reasons associated with problems of collection, the current inquiries are limited to firms and branches ordinarily employing 15 persons or over. This restriction results in the inclusion of industrial samples of varying size in the monthly surveys, the variation depending upon the organization of the industry in large or in small units; from the equally important geographical aspect, however, much greater uniformity exists in the coverage of total employees. It is nevertheless important to note that in all cases the coverage is large. Thus some 59 p.c. of the total wage-earners and salaried employees enumerated in the Decennial Census taken on June 1, 1941, were on the payrolls of the establishments furnishing monthly statistics at the same date. A more valid comparison is that made with the number of workers employed at the census date in the nine industrial groups mentioned above as contributing to the current surveys; this shows that the persons of whose employment and payrolls there is current record constituted over 79 p.c. of all those working in these industries when the census was taken.

With the termination of hostilities in the European and the Pacific theatres of war during 1945, there was further and more marked recession from the high point of industrial activity which had been reached when wartime production was at its peak. The decline in 1944 from 1943 had been slight; that in 1945 as compared with

\* Revised by Miss M. E. K. Roughsedge, M.B.E., Chief, Employment and Payroll Statistics Branch, Dominion Bureau of Statistics.

1944 amounted to 4.3 p.c., while the loss as compared with the all-time high of 1943 was almost 5 p.c. The curtailment of employment in munitions plants and the relaxation of wartime controls, which had retarded the production of consumer goods and services, acted in opposite directions to produce a volume of employment in 1945 which was not greatly below the all-time peak, and which was approximately 54 p.c. above the 1929 level. It is also interesting to note that, as compared with 1929, when industrial activity in the Dominion had reached its all-time maximum in the pre-war period, there was in the year under review an increase of some 47 p.c.

The tendency from month to month during 1945 was generally downward, there being few interruptions in the retrogressive movement. The most extensive contractions, apart from those at the opening of the year, took place shortly after V-J Day, namely at Sept. 1 and Oct. 1, when the reductions were on a scale which has rarely been exceeded in any month in the quarter of a century for which the record is available. For obvious reasons, the effect of the War was particularly buoyant in the case of manufacturing, while many of the non-manufacturing classes were adversely affected by the prevailing shortages of men and materials, having had low priority in respect of labour procurement when the market was tight. In reaction from this situation, most of the curtailment in recorded employment in 1945 as compared with immediately preceding years, was reported in manufacturing, while in the non-manufacturing classes, taken as a unit, there was considerable expansion which developed in extent as the year progressed. Except in mining, there were advances in each of the divisions of this broad industrial group, in which there was a general rise of 4.7 p.c. over 1944; the decline in manufacturing in the same comparison amounted to 9.3 p.c. These divergencies in trends resulted in a more normal distribution of workers between the manufacturing and the non-

manufacturing classes than had existed for several years. Thus, at the end of 1945, just under 58 p.c. of all persons in recorded employment were engaged in factory work, as compared with the proportion rather more than 61 p.c. at the same date in 1944. In 1939, however, the general ratio had been rather less than 52 p.c. of the total engaged in manufacturing, so that the 1945 distribution was still abnormal.

With the gradual release of workers from the Armed Forces and from employment in war work, the sex distribution of the persons on the payrolls of the co-operating firms showed some variation from that which had been indicated in immediately preceding years. At Oct. 1, 1944, the 271 per 1,000 workers in recorded employment in the nine leading industries were women, a proportion which considerably exceeded that of 253 per 1,000 indicated 12 months later. The latter proportion was the lowest since 1942, when the number of women per 1,000 employed at Oct. 1, had been 235. In the year ended Oct. 1, 1945, there were declines of about 5.3 p.c. in recorded employment for men, and of about 13.5 p.c. in that for women. It is nevertheless important to note that men constituted rather more than 51 p.c. of the total workers released by the firms furnishing data during the year.

The Bureau of Statistics tabulated monthly returns from an average of 15,358 firms and branches in the eight leading industries, in which the reported employees averaged 1,787,751. In 1944, the employers participating in the current surveys had numbered 14,641, and their staffs had averaged 1,850,851. The index of employment (1926=100) averaged 175.1 in 1945, showing a reduction of 4.3 p.c. as compared with that of the preceding 12 months. (In connection with the members of respondents, it should be noted that adjustment is currently made in the index numbers for increased coverage of industry.) The amounts distributed in weekly salaries and wages by the establishments furnishing data in the year under review had aggregated \$57,178,954, representing an estimated annual payroll of approximately \$2,973,306,000 disbursed in salaries and wages by these firms and branches. The average earnings per employee were \$31.99 in 1945, as compared with \$31.84 in 1944, \$30.78 in 1943, and \$28.56 in 1942. While the latest index of aggregate earnings was lower by 3.8 p.c. than that of 1944, the average earnings of the typical individual in recorded employment showed an increase of 0.5 p.c. in the same comparison.

In connection with the figures of earnings, it is interesting to note the much greater rise that has taken place during the period for which information is available in the index of payrolls than in that of employment. Thus, in 1945, there was an average increase of 14.7 p.c. in employment from the commencement of the payroll record at June 1, 1941, as compared with the gain of 42.6 p.c. in the reported salaries and wages in the same period. The reasons for the substantially greater advance in the latter than in the former index may be recapitulated as follows: (1) the concentration of workers which, despite important declines during 1945, then still existed in the heavy manufacturing industries, where rates of pay are above the average and, in addition, there has been a considerable amount of overtime work; (2) payment of cost-of-living allowances to the majority of workers, at rates which were increased on more than one occasion before their absorption in the basic wage rates from Feb. 15, 1944; (3) the progressive up-grading of employees as they gained experience and (4) the payment of higher wage rates in a large number of cases.

The changing industrial pattern in the Dominion following the cessation of hostilities lessened the influence of some of these factors during 1945. The existence of several important industrial disputes in Canada during the year had a considerable effect upon the situation, which was also indirectly affected by strikes in the United States. In the case of manufacturing, it is interesting to note that between the latter part of 1944 and 1945, there was a decline of between one and two hours in the average time worked per week by hourly rated wage-earners, accompanied by a falling-off of rather more than three cents per hour in the average hourly earnings in the same period, the transfer of employees from the relatively high-pay to the relatively low-pay industries, together with reduced overtime payments, was responsible for the lowered rate.

The accompanying chart shows the general trends of employment, payrolls and average weekly earnings in the period from June 1, 1941, when the record of earnings was commenced to complement the monthly statistics of employment, available from 1920. This shows clearly that, despite some recession in both curves in 1945, that of payrolls continues considerably above the curve of employment; the graph also illustrates the fact that although the per capita earnings in 1945 were slightly below the maximum weekly averages recorded late in 1944, they were nevertheless maintained at a comparatively high level.

Grand Totals.....	1,855,300	59,443,292	32.04	114.6	142.1

<sup>1</sup> These totals are for eight industries only; finance, the ninth industry, is not divisible by provinces and the totals are given separately in the classification by industry.

<sup>2</sup> Includes iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments, and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries, with the exception of electric light and power.

<sup>3</sup> Included in 1945 for the first time.

# ANNUAL OF AVERAGE HOURS WORKED PER WEEK AND AVERAGE HOURLY EARNINGS IN SPECIFIED INDUSTRIES 1945

# AVERAGE HOURS PER WEEK AND AVERAGE HOURLY EARNINGS OF HOURLY RATED WAGE EARNERS REPORTED IN MANUFACTURING BY PROVINCES 1945

**Employment and Payrolls by Economic Areas.**—Geographically, the declines in industrial activity during 1945 were widely distributed, lowered employment as compared with 1944 being indicated in all provinces except New Brunswick and Saskatchewan. The largest percentage losses took place in Quebec and British Columbia. In all areas, the contraction was largely restricted to the manufacturing industries; mining also showed widespread curtailment, while the trends in the remaining non-manufacturing divisions were generally favourable. It is also noteworthy that despite the curtailment in industrial activity during 1945, the volume of employment in all provinces continued substantially above that indicated in pre-war days.

The aggregate weekly payrolls reported in Prince Edward Island, Nova Scotia, Quebec, Ontario, Alberta and British Columbia were rather lower in 1945 than in the preceding 12 months, but those reported in New Brunswick, Manitoba and Saskatchewan were slightly higher. In all provinces except Nova Scotia and Ontario, the average weekly earnings of the persons in recorded employment reached new all-time high points during 1945. The increases as compared with the preceding 12 months, however, were moderate.

## 2.—Index Numbers of Employment as Reported by Employers in Economic Areas, by Months, 1944 and 1945, with Yearly Averages since 1921

NOTE.—These indexes are calculated as at the first day of each month, on the base 1926=100. The relative weights show the proportion of employees reported in each economic area to the total reported by all employers making returns in Canada at Dec. 1, 1945.

Relative weights of employment in economic areas, as at Dec. 1, 1945 <sup>2</sup> .....	8.1	30.3	40.4	12.0	9.2	100.0

<sup>1</sup> Since the average for the calendar year 1926, including figures up to Dec. 31, 1926, is the base used in computing these indexes, the average index here given for the 12 months Jan. 1-Dec. 1, 1926, generally shows a slight variation from 100.

<sup>2</sup> Percentages of Dominion total.

**Employment and Payrolls by Cities.**—The curtailment in industrial activity in the eight cities having populations of 100,000 or over was relatively greater during 1945 than that indicated in the remaining parts of the Dominion, a development which was to be expected in view of the fact that employment therein had shown more pronounced expansion during the War than was the case in other sections of the country. Thus, in Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver taken as a unit, there was a reduction of 7.7 p.c. from 1944 in the numbers on the payrolls of the co-operating establishments, a ratio which considerably exceeded that of 1.5 p.c. in the same comparison in the smaller centres and the rural areas in Canada. Nevertheless, the 1945 index for these cities was nearly 68 p.c. above the 1939 level, while the increase in this comparison in the smaller municipalities and the rural areas amounted to approximately 44 p.c.

Without exception, employment in the larger cities during the year under review was in lesser volume than in 1944, and except in Winnipeg, there were accompanying declines in the aggregate payrolls. In the case of Quebec, Toronto, Hamilton and Windsor, the average earnings per person in recorded employment were lower, but those in Montreal, Ottawa, Winnipeg and Vancouver were rather higher. The changes in the averages in all cases were slight.

### 3.—Index Numbers of Employment as Reported by Employers in Leading Cities, by Months, 1944 and 1945, with Yearly Averages since 1929

NOTE.—These indexes are calculated as at the first day of each month, on the base 1926=100. The relative weights show the proportion of employees reported in each city to the total reported by all employers making returns in Canada at Dec. 1, 1945. Averages for 1921-28, inclusive, are given at p. 772 of the 1938 Year Book.

**Employment by Industries.**—The statistics of employment for the major industrial divisions given in Table 4 for recent years, provide evidence of the effect of the War upon the situation in the Dominion; this is particularly the case in manufacturing, in which the index number of employment rose from 112.3 p.c. of the 1926 average in 1939, to a maximum of 231.4 p.c. at Oct. 1, 1943, thence declining to 184.2 p.c. at Dec. 1, 1945. In the latter comparison, there was a decline of over one-fifth. On the other hand, the annual index for 1945 exceeded by over 81 p.c. that of 1939.

The curtailment in the year under review in manufacturing was particularly noteworthy after V-E and V-J days, as a result of the completion or cancellation of contracts for munitions; the contra-seasonal reductions reported at September 1 and October 1 reached proportions that have rarely been exceeded in any month in the record. The losses were especially marked in plants producing durable manufactured goods, in which there was a recession of 16.3 p.c. in employment as compared with 1944; the falling-off in the manufacture of non-durable goods amounted only to 1.2 p.c. In the latter category, the losses were largely restricted to the chemical group, there being an increase of 2.1 p.c. over 1944 in the number of employees reported in the light manufacturing industries, exclusive of chemicals. It is interesting to note that, in spite of the recession indicated in the year under review in the manufacture of durable goods, employment therein was nevertheless 133.7 p.c. higher than in 1939, while the increase in the same comparison in the light manufactured goods industries amounted only to 49.1 p.c.

While the termination of the War reacted unfavourably upon the situation in manufacturing, the non-manufacturing industries taken as a unit showed considerable revival in 1945 as compared with 1944, due to the relaxation of restrictions on labour and materials necessitated by wartime conditions. As a result, there was an increase of 4.7 p.c. in the combined non-manufacturing industries, in which only mining showed a general reduction.

Paralleling the movements in employment, the aggregate payrolls in manufacturing were lower and those in the non-manufacturing industries (except mining) were higher in 1945 than in 1944. The per capita weekly earnings in manufacturing showed very little change; in the case of the remaining industrial groups, the typical employee in recorded employment received a higher earned income than was the case in 1944 or any preceding year for which monthly statistics are available.

#### 4.—Index Numbers of Employment, by Industrial Groups and by Months, 1944 and 1945, with Yearly Averages since 1929

NOTE.—These indexes are calculated as at the first day of each month, on the base 1926=100. The relative weights show the proportion of employees reported in each industry to the total reported by all employers making returns in Canada at Dec. 1, 1945. Averages for 1921-28, inclusive, are given at p. 773 of the 1938 Year Book.

**Subsection 3.—Unemployment as Reported by Trade Unions**

Quarterly statistics on unemployment are compiled and published in the *Labour Gazette* by the Department of Labour, and are based at the present time on returns received from about 2,300 local trade union branches, having an aggregate membership of more than 400,000 workers. "Unemployment" means involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or idle because of illness, are not considered as unemployed, while union members retired or in the Armed Forces and members of unions involved in industrial disputes are excluded from the tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentages of unemployment are based, it should be understood that the figures for each month have reference only to the reporting organizations.

### 5.—Percentages of Unemployment in Trade Unions, by Provinces, Half-Yearly, 1931-44 and Quarterly, 1945

NOTE.—For percentages of unemployment as at June 30 and Dec. 31 from 1915 to 1930, see p. 827 of the 1934-35 edition of the Year Book. For monthly data from 1921, see successive issues of the Year Book commencing with the 1922-23 edition.

### Section 4.—Unemployment Insurance\*

Unemployment insurance, which came into operation on July 1, 1941, applies to all employed persons with the following exceptions: workers in specified industries or occupations such as agriculture, forestry, fishing, lumbering and logging (unless in an area where the Commission has prescribed that persons employed in lumbering and logging shall be insured), transportation by water, stevedoring, private domestic service, private-duty nursing and workers on a contractual basis greater than a week, e.g., monthly or semi-monthly, who earn more than \$2,400 per year (and, except

\* A more complete account of the Unemployment Insurance Act, 1940, and of the administrative machinery set up by it appears in the 1941 Year Book at pp. 665-667 and in the 1942 Year Book at pp. 686-691.

by consent of the Commission, employment in a hospital or charitable institution not carried on for gain). Formerly, no person who received more than \$2,000 per year was covered, but by an amendment effective Sept. 1, 1943, all employees paid on a contractual basis of an hourly, daily, weekly or piece rate (including a mileage rate) are now included in insurable employment regardless of the amount of their earnings, together with all other employees who receive \$2,400 or less per year. This amendment also extends the coverage with regard to public utilities, and makes possible the inclusion of employees of hospitals and charitable institutions.

**Unemployment Insurance Fund.**—Employers and employees contribute amounts that will bring approximately equal totals from each group. A grant amounting to one-fifth of these contributions is added by the Dominion Government, which also assumes the cost of administration. From July 1, 1941, to Dec. 31, 1945, employers and employees paid \$265,561,533 into the Fund and the Dominion added \$53,112,307. Reserves of the Fund have been invested in Dominion of Canada bonds and at the end of the year 1945, the par value of these investments amounted to \$299,332,000. The accrued interest was \$1,919,473.

Benefit first became payable on Jan. 27, 1942, and from that date to Dec. 31, 1945, of the 450,872 claims filed at local offices, 432,006 were forwarded to the regional and district offices for adjudication and 217,487 persons were paid benefit; \$19,106,059 was paid out of the Fund.

**Contributions and Benefit.**—The rates of contribution and benefit are indicated in the following statement.

No benefit is payable during the first nine days of unemployment in a benefit year. After that time, the duration of benefit is related to the employment and contribution history of the employee, the number of days' benefit being equal to one-fifth the number of contribution days during the previous five years, less one-third the number of benefit days in the previous three years. Insurance benefit is paid as a right on fulfilment of four statutory conditions:—

- (1) The payment of not less than 30 weekly (or 180 daily) contributions within two years, while in insured employment.
- (2) Proper presentation of the claim, and proof of unemployment.
- (3) Evidence that the contributor is capable of, and available for work, but unable to obtain suitable employment.
- (4) Proof that the contributor has not refused to attend a course of instruction or training if directed to do so.

Disqualifications for benefit include: loss of work due to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or an institution supported out of public funds; the earning of less than 90 cents per day while in employment. Disqualification of a claimant for a period not exceeding six weeks may be made if an employee is discharged by reason of his own misconduct, or leaves his employment voluntarily without just cause.

## WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT

Class	Earnings in a Week	Weekly Contributions <sup>1</sup>		Denom- ination of Stamp <sup>2</sup>	Weekly Benefits <sup>3</sup>	
		By Employee	By Employer		Single Person	Person With One or More Dependents
0	Less than 90 cents daily (or under 16 years of age).....	\$ 4	\$ 0.27	\$ 0.27	\$ 4	\$ 4
1	\$ 5.40 to \$ 7.49.....	0.12	0.21	0.33	4.08	4.80
2	\$ 7.50 to \$ 9.59.....	0.15	0.25	0.40	5.10	6.00
3	\$ 9.60 to \$11.99.....	0.18	0.25	0.43	6.12	7.20
4	\$12.00 to \$14.99.....	0.21	0.25	0.46	7.14	8.40
5	\$15.00 to \$19.99.....	0.24	0.27	0.51	8.16	9.60
6	\$20.00 to \$25.99.....	0.30	0.27	0.57	10.20	12.00
7	\$26.00 or more.....	0.36	0.27	0.63	12.24	14.40

<sup>1</sup> The daily rate of contribution in respect of each class is one-sixth of the weekly rates. <sup>2</sup> Unemployment insurance stamps combine both employer and employee contributions. <sup>3</sup> Rates calculated on assumption that the person is in the same class for two years. Daily or weekly benefit for an insured person without dependents is 34 times his average daily or weekly contributions, and 40 times the average employee contribution for married persons mainly or wholly maintaining one or more dependents. <sup>4</sup> Workers in this class make no contributions and are not eligible for benefit. They may, however, accumulate benefit rights on the basis of employer contributions.

**Statistics of Unemployment Insurance.\***—Benefits under the Unemployment Insurance Act first became payable in January, 1942. Since that time, monthly statistical reports on the operation of the Act have been published. A definite seasonal variation in the monthly figures on claims filed has been in evidence, the monthly totals increasing in the autumn and decreasing in the spring and summer, except for the months since June, 1945, following the cessation of hostilities in Europe. In 1942, the monthly average of claims filed was 2,448, the range being from 663 to 4,629. The 1943 monthly average was 3,055 with the monthly totals ranging from 1,013 to 6,562. During 1944, the monthly average was 7,575 with a range from 3,106 to 13,770. With the end of the War in August, 1945, the monthly totals in the last half of the year increased sharply, resulting in an average of 24,699 claims per month for 1945 and a 36,595 average for the last six months; monthly claims ranged from 8,430 to 57,612. During January and February, 1946, the totals of claims filed were 71,932 and 59,098, respectively.

The number of beneficiaries each month has fluctuated with the number of claims filed, subject to a lag of approximately one month. Because of re-employment, or because of the provisions of the Act governing the receipt of benefits, the number of beneficiaries in any month is usually less than the number of claimants. Only when the claims received are falling off sharply, is the number of beneficiaries in a period likely to exceed the number of claimants.

An indication of the extent of recorded unemployment among workers covered by unemployment insurance is given by the numbers signing the live unemployment register in the last week of each month. Those maintaining a live claim for benefit must sign the register once a week, thus certifying that they are unemployed, are capable of and available for work but unable to find suitable employment.

\* Statistics of Unemployment Insurance are compiled and published by the Social Analysis Branch of the Dominion Bureau of Statistics from material supplied by the Unemployment Insurance Commission.

The same seasonality has been evident in these figures as in those of claims filed but the live register supplies a measure of recorded unemployment at a given time whereas claims filed indicate the number of cases of recorded unemployment in a period.

In addition to the monthly material on the operation of the Act, annual tabulations of the persons employed in insurable employment are prepared from returns covering the book exchange at Apr. 1, and annual data on benefit years established and benefit years terminated are published.

The number of persons insured under the Unemployment Insurance Act, shown in Table 6, was assumed to be those working in insurable employment as at Apr. 1.

Table 7 presents information on the persons for whom current benefit years were in existence during 1944. A benefit year is established under the Unemployment Insurance Act when an insured person, upon becoming unemployed, submits a claim and proves that at least 180 daily contributions have been made on his behalf during the preceding two years. Because of other statutory provisions or because he may regain employment before he actually receives benefit, the setting up of a benefit year does not necessarily result in the receipt of benefit payments. When a benefit year is established it means, merely, that the claimant's right to receive benefit at a certain rate at any time during the succeeding twelve months is determined. Thus, although 87,663 persons held benefit years current in 1944, only 52,950 actually drew benefit in that year.

In almost all cases (excluding death, etc.), a benefit year remains in existence either until the authorized benefit rights are exhausted or until twelve months have passed since the date of its establishment, whichever occurs first. Some benefit years established in 1943 were carried over into 1944 so that, although 66,934 persons established benefit years in 1944, a total of 87,663 persons held benefit years currently available in 1944.

The amount of benefit paid, as presented in Table 7, is secured by multiplying each daily rate of benefit by the number of days paid at that rate on the cards representing benefit years upon which benefit was drawn in 1944.

In Table 8, the persons with current benefit years in 1944 are classified according to the number of benefit days paid. Table 9 classifies those who drew benefit by the daily rate at which they were paid. The daily rate of benefit is determined by the amount of the daily average contribution paid on behalf of the claimant during the past two years and upon whether or not he has a dependent within the meaning of the Act.

The persons who established benefit years in 1944, those whose benefit years terminated in 1944, with those whose benefit years terminated by exhaustion of rights, shown separately, are classified by age groups in Table 10. In Table 11 the persons who established benefit years in 1944 and the benefit days paid on those benefit years are presented by industrial group and age.

Table 12 classifies those who established benefit years in 1944 and the days paid on those benefit years by occupation group.

A more detailed analysis of these data, by sex and province, is available in the publication "Annual Report on Current Benefit Years Under the Unemployment Insurance Act" issued by the Dominion Bureau of Statistics.

### 6.—Persons Insured under the Unemployment Insurance Act, Classified by Industrial Groups and Sex, 1944 and 1945

NOTE.—These figures include only those who exchanged an unemployment insurance book or were issued a book for the first time in April. They therefore represent an estimate of the number employed in insurable employment as at Apr. 1.

**Employment Service.**—The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act, 1940. The public employment offices, which had functioned under a joint Dominion-Provincial arrangement for more than two decades, were taken over on Aug. 1, 1941 and added to by the Commission in all provinces except Quebec. The Commission also established offices in Quebec and the Provincial Government thereupon reduced the number of its own offices. (See 1942 Year Book, p. 689.)

**Administrative Organization.**—The Unemployment Insurance Act is administered by a Commission of three members, whose head office is at Ottawa. The field organization consists of five regional offices, four district offices, which perform some of the functions of the regional offices, and over 200 local offices. The last-mentioned, now called National Employment Offices, are both employment offices and the offices at which insured workers register their claims for benefit when they become unemployed. About 250 Unemployment Insurance auditors examine insurance books and employers' records to ensure compliance with the Act. The machinery for appeals and references on disputed benefit claims consists of courts of referees and an umpire.

A National Employment Committee and regional and local employment committees provide assistance in regard to the employment service. An Unemployment Insurance Advisory Committee gives advice on questions connected with the insurance side of the Commission's work and also reports annually to Parliament on the financial condition of the Unemployment Insurance Fund. For further details, see the 1942 Year Book, p. 690.

### Section 5.—Canadian Vocational Training

Canadian Vocational Training is the new name given to the various training projects carried on by the Dominion Department of Labour in co-operation with Provincial Governments, under the Vocational Training Co-ordination Act, 1942. It includes the former War Emergency and Youth Training Programs, and also the training of apprentices. An Advisory Council, representative of employers, organized labour, veterans' and women's organizations, and Provincial Departments of Education, assists the Minister of Labour by advising on matters of administration and policy. The following table shows the allotment of Dominion funds to the provinces for the year ended Mar. 31, 1945, and the total claims paid by the Dominion against these allotments up to Apr. 30, 1945.

**14.—Dominion Allotments and Claims Paid for Canadian Vocational Training, by Provinces, Year ended Mar. 31, 1945**

<b>Totals.....</b>	<b>387,500</b>	<b>233,254</b>	<b>5,265,000</b>	<b>2,162,395</b>	<b>70,000</b>	<b>6,475</b>

**Youth Training.**—During the fiscal year 1944-45, 7,122 persons were given training under this program. The training consisted for the most part of various general and specialized courses for rural young people in agriculture, rural homecraft and handicrafts, and other related subjects. It also included assistance to university

students, nurses-in-training in hospitals and prospective teachers. The expenditures were financed on a 50-50 basis between the Dominion and the province concerned. A special fund contributed entirely by the Dominion provided assistance to some 65 additional students in medicine, dentistry, science and engineering. The basis of all assistance to students was academic merit plus financial need.

**War-Emergency Training.**—This program (fully described on pp. 694-698 of the 1942 Year Book) was continued during 1944-45, but on a greatly reduced scale, as the needs of war industry and the Armed Forces for skilled workers and tradesmen had been fairly adequately met by the end of the fiscal year.

*Training in Industry.*—The total enrolment in full-time pre-employment classes during the year was 2,791 men and 1,262 women. Any part-time classes for employed persons consisted largely of theoretical and technical classroom instruction. The total enrolment was 3,950 men and 1,061 women. In the full-time plant schools carried on in industry, the total enrolment was 3,629 men and 5,615 women. Increasing interest was shown in the intensive training courses for foremen and supervisors in industry, which included the units of job instructor, job relations, job methods and job safety training. The total enrolment for the year was 30,192.

*Training for the Armed Forces.*—Training for the Royal Canadian Air Force for ground mechanics and pre-aircrew classes was discontinued before Mar. 31, 1945. The total number given training during the year was 5,409. The type and length of course followed closely those given in the preceding years.

Classes for the Army showed a total enrolment during the year of 9,860, and consisted for the most part of a three-month course for a wide range of Army trades and a somewhat longer course for Army clerks and clerk-stenographers.

The enrolment of Naval tradesmen during the year was 2,176 comprising engine-room artificers, motorfitters, cooks and writers.

*Rehabilitation Training for Discharged Members of the Forces.*—This type of training assumed larger proportions with the increase in the number discharged from the Army, Navy and Air Force. Canadian Vocational Training, at the request of the Department of Veterans Affairs, was made responsible for the provision of not only all vocational training to veterans, but also for pre-matriculation classes to enable veterans to enter either a university or certain types of occupations. The total enrolment during the year was 5,667 men and 1,123 women.

In order to provide this training, special centres were opened and buildings and equipment were made available. These centres were used entirely for discharged members of the Forces. In addition, use was made of certain provincial and municipal vocational schools, as well as privately owned trade schools and business colleges. All those undergoing training were paid by the Department of Veterans Affairs, a monthly grant of \$60 for single men and \$80 for married men with additional amounts for dependent children.

To train veterans for the large number of skilled and semi-skilled occupations in industrial and commercial establishments for which no adequate pre-employment training is possible in a school, a plan of "on the job" training in industry was instituted. Special representatives systematically canvass employers to find opportunities where veterans, men or women, can be trained on the job. The length of the training period varies with the degree of skill required for each occupation, the

previous experience of the individual and his or her aptitude and ability to learn. Individual contracts provide for a stated weekly or monthly wage. The employer pays the trainee what his services are worth and the balance of the wage is made up by the Department of Veterans Affairs from the veteran's training grant. As training progresses and skill increases, the proportion of the wage paid by the employer increases and that paid by the Department decreases.

**Apprentice Training.**—During the year, 10-year agreements were completed between the Dominion Department of Labour and all provinces, except Prince Edward Island and Quebec, under which the Dominion will share equally with the province in certain approved costs in connection with the training of apprentices in correspondence courses, part-time classes or full-time classes. This necessitated the passing of Apprenticeship Acts in the Provinces of New Brunswick, Manitoba, Saskatchewan and Alberta, where there was no such legislation. Each province draws up its own list of trades designated under the Act, and all apprentices come under Government supervision. The trades deriving the most benefit from the Apprenticeship Agreements are the building and construction trades and motor-vehicle repair.

## Section 6.—Control of Manpower

The responsibility for carrying out Government policies with respect to the utilization of manpower continued to be vested in the Minister of Labour during the year ended Mar. 31, 1946, but controls were being gradually relaxed. An outline of the Government's policy and of the administration of the National Selective Service Civilian and Mobilization Regulations was given at pp. 777-779 of the 1945 Year Book.

Call-ups under the Mobilization Regulations were suspended on May 7, 1945, on termination of the European War. The requirement that women should secure permits before seeking or entering employment was rescinded. The compulsory transfer of workers was abandoned and more freedom in the issuance of Labour Exit Permits allowed. Other employment controls were gradually removed until the only ones remaining were the requirements that employers register their vacancies with an Employment Office and that workers register when seeking employment. These are still in effect and are designed to aid the National Employment Service in its placing duties.

## Section 7.—Organized Labour in Canada

Information concerning trade unions in Canada is published in the annual report on "Labour Organization in Canada" issued by the Department of Labour.

At the close of 1944 there were 724,188 members of trade unions in Canada. The membership of the Trades and Labour Congress of Canada was reported as 284,732 in 2,274 branches of affiliated unions and Dominion unions; that of the Canadian Congress of Labour as 272,146 in 894 branches and local unions; of the Canadian and Catholic Confederation of Labour, as 74,624 in 296 branches; the independent railroad brotherhoods, 36,147 in 366 branches; other central organizations, 45,328 in 234 branches; and independent local unions, 11,211 in 59 branches.

*Trades and Labour Congress of Canada.*—The Congress is the oldest of the central labour organizations in Canada. After the disbanding of the Canadian Labour Union, which had drawn together local unions in Ontario from 1873 to 1877, inclusive,

there was no central organization until 1883 when the Trades and Labour Council of Toronto called a conference of local unions and plans were made to establish a Dominion organization which was formally set up in 1886.

Affiliated with the Trades and Labour Congress at the present time are "international" trade unions almost all of which are also affiliated with the American Federation of Labour, a number of Canadian or "national" unions and a number of directly chartered Dominion labour unions.

*Canadian Congress of Labour.*—This Congress was organized in September, 1940, when the All-Canadian Congress of Labour, formed in 1927, amended its constitution to permit the affiliation with the Congress of the Canadian branches of those "international unions" which, in the United States are affiliated with the Congress of Industrial Organizations. The Canadian Congress has also among its members a number of unions to which it has granted charters. An exception to the statement concerning "international unions" is the United Mine Workers of America which is linked in Canada with the Canadian Congress of Labour but, in the United States, with the American Federation of Labour.

*Canadian and Catholic Confederation of Labour.*—National Catholic Unions in Canada date from 1901. In 1921 these local Catholic Syndicates, which are grouped in federations according to industry so far as possible, formed a central organization, the Canadian and Catholic Confederation of Labour. These unions are confined to the Province of Quebec.

**Canada and the International Labour Organization.**—The International Labour Organization was established in association with the League of Nations in 1919 under the Treaties of Peace with the object of improving labour conditions throughout the world by international agreement and legislative action. An association of nations, financed by their Governments and controlled by representatives of those Governments and of their organized employers and workers, the Organization comprises: (1) the General Conference of representatives of the Member States; (2) the International Labour Office; and (3) the Governing Body of the Office.

The Conference in normal times meets at least once a year, and is composed of 4 delegates from each Member State, 2 representing the Government and 2 representing employers and workers, respectively. Decisions of the Conference are in the form of draft Conventions or of Recommendations. The former, when given legislative effect and ratified by Member States are legally binding on them and their enforcement within such countries is a matter for annual consideration by the Conference. In the case of federal countries where the national legislature has limited jurisdiction in the labour field, the Treaty provides that a draft Convention may be treated as a Recommendation. It requires, however, that every Convention must be brought before the competent authority or authorities for legislative or other action. In Canada the competent authorities in respect to most of the Conventions and Recommendations are the Provincial Legislatures.

The International Labour Office acts as the permanent secretariat of the Organization and as a centre of information and publishing house.

The Governing Body consists of 32 persons, 16 Government representatives, 8 employers' and 8 workers' representatives. All but the representatives of the 8 States of chief industrial importance, which hold permanent seats, are elected

triennially by the Conference. The Governing Body has general supervision of the International Labour Office, frames its budget and fixes the agenda of the Conference when the Conference itself does not do so. It usually meets quarterly. Four sessions were held during 1945: at London, England, in January; at Quebec, Canada, in June; and at Paris, France, in October and November.

There have been 27 sessions of the Conference at which 67 draft Conventions and 73 Recommendations have been adopted covering a wide range of subjects: hours of work; weekly rest; holidays; minimum age for employment; night-work of women and young persons; minimum wages; health and safety; workmen's compensation; seamen's conditions; insurance against unemployment, sickness, old age and death; colonial labour problems; protection of migrant workers; and many other aspects of the protection of workers' rights and interests. There have been 913 ratifications of these Conventions from 51 countries.

Six International Labour Conventions relating to seamen have been given legislative effect by Parliament and have been ratified by the Dominion Government. Two other Conventions concerning statistics and accidents to dockers are in force and have been approved by resolution of Parliament. They will be ratified shortly.

The 27th Session of the International Labour Conference was held at Paris from Oct. 15 to Nov. 5. It was attended by delegates and technical advisers from 48 countries, including Italy which was re-admitted to membership. Resolutions of the Conference recommended national and international policies for the maintenance of full employment and the adoption of certain minimum standards for the employment of young persons. Preliminary consideration was given to the night-work of young persons and their medical examination before and after employment, subjects which will be discussed again at the next General Session at Montreal beginning Sept. 19, 1946. A Committee on constitutional questions was established to prepare a report recommending changes in the constitution, which, after submission to Governments for comments, will go before the next Conference. The principal effect of the proposed amendments will be to sever ties with the League of Nations and to provide for establishing relations with the United Nations towards which negotiations are already under way.

Canada was also represented at a preparatory technical conference of representatives of 20 maritime countries held in Copenhagen, Denmark, from Nov. 15 to Dec. 1, to draft proposals for a full Maritime Session to be held in Seattle, U.S.A., about June 1, 1946, concerning methods of establishing minimum standards for the wages, hours and other conditions of seamen.

During the year the Governing Body decided to set up standing committees to provide special machinery for considering the labour problems of major world industries: coal mining; inland transport; textiles; iron and steel production; the metal trades; petroleum production and refining; building; civil engineering and public works. Committees on the first two were set up and met at London in December. Canada was represented at both meetings. It is expected that other committees will be established and hold preliminary meetings before the end of 1946.

Fuller information regarding these various meetings may be found in the *Labour Gazette*.

## Section 8.—Industrial Accidents and Workmen's Compensation

### Subsection 1.—Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the Dominion Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and various other government authorities, from departmental correspondents, and from press reports.

#### 18.—Fatal Industrial Accidents in Canada, by Industries, 1942-45

<sup>1</sup> Subject to revision.

**Causes of Fatal Accidents.**—The largest number of fatal accidents to employees in 1945, 425 were caused by moving trains, vehicles, etc. Falling objects caused 191 fatalities, and falls of persons 195. Other fatal accidents included: 179 caused by dangerous substances, 26 by hoisting apparatus, 41 by striking against or being struck by objects, 27 by prime movers and 31 by handling objects. Included in the category "other causes" were 153 fatalities of which 97 were due to industrial disease, strain, etc. The number of accidents, fatal and non-fatal, dealt with by the provincial Workmen's Compensation Boards are shown in Subsection 2.

### Subsection 2.—Workmen's Compensation\*

In all provinces, except Prince Edward Island, legislation is in force providing for compensation for personal injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease, except where the workman is disabled for less than a stated number of days. To ensure payment of such compensation, each provincial Act provides for an accident fund, administered by a Board, to which employers are required to contribute at a rate determined by the Board, in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation, as determined by the Board, and pay a proportion of the expenses of administration. A Dominion Act provides for compensation for accidents

\* Fuller information concerning the provincial Workmen's Compensation Acts is given in a pamphlet issued annually by the Department of Labour of Canada.

to Dominion Government employees according to the conditions laid down by the Act of the province in which the accident occurs. In Prince Edward Island, where there is no provincial Act in effect, compensation is paid to Dominion Government employees according to the provisions of the New Brunswick Act. Dominion Regulations of 1945 under the War Measures Act provide compensation for seamen not under any Workmen's Compensation Act.

Necessary medical aid is given to workmen during disability. In British Columbia, workmen contribute to the cost of medical aid; elsewhere it is borne by the accident fund. Where the employer is individually liable for compensation, he must also furnish medical aid.

Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus. In all provinces, except New Brunswick, silicosis is compensated under certain conditions. The other diseases compensated vary according to the industries of the provinces.

*Scope of the Acts.*—The Acts vary in scope, but, in general, they cover construction, mining, manufacturing, lumbering, fishing, transport and communications and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta and British Columbia.

*Benefits.*—Under each Act, a fixed period must elapse between the date of the accident and the date when compensation begins but in all cases medical aid is given from the date of the accident. This waiting period varies from three to seven days and in some provinces compensation is paid for the waiting period, if disability continues beyond it.

At present, compensation in fatal cases is paid as follows:—

Burial expenses, \$100 in Nova Scotia and New Brunswick, \$150 in Manitoba, \$175 in Quebec, and \$125 in the other provinces. In certain cases costs of transporting the body are also allowed.

To a widow or invalid widower, or to a foster-mother as long as the children are under the age limit, a monthly payment in Manitoba and Ontario of \$45 and in the remaining provinces \$40; in addition a lump sum of \$100 is paid in New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia.

For each child in the care of a parent or foster-mother receiving compensation, a monthly payment is made of \$10 in New Brunswick, Nova Scotia, Quebec, Ontario, and British Columbia, but in the latter province \$12.50 is paid to children between 16 and 18 years of age attending school; in Manitoba \$12 for the eldest child, \$10 for the second, \$9 for the third, and \$8 for each additional child; in Alberta and Saskatchewan, \$12 for each child. To each orphan child \$20 per month is paid in Nova Scotia, Saskatchewan, Alberta and British Columbia and \$15 in the other provinces with a maximum of \$80 per month to one family in Nova Scotia and British Columbia.

Except in the case of invalids, payments to children are not continued beyond the age of 16 in Nova Scotia, Ontario, Manitoba and Saskatchewan, 18 in Quebec Alberta and British Columbia, and 16 for boys and 18 for girls in New Brunswick. In Manitoba, Ontario and Saskatchewan payments for children may be made up to the age of 18 if it is desirable to continue their education. In British Columbia

and Manitoba payments to invalid children are continued until recovery, while the other provinces make payments only for the length of time the Boards consider that the workman would have contributed to their support.

Where the only dependents are persons other than consort or children, all the Acts provide that compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly sum to be paid to all such dependents is limited to \$40 in Manitoba, \$70 in Alberta, \$45 in Nova Scotia and \$55 in British Columbia. In British Columbia, however, if there are also dependents such as widow, invalid widower or children the maximum payable to other dependents is \$40 per month. In all provinces, compensation to dependents other than consort or children is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Alberta, Saskatchewan and British Columbia, maximum benefits payable to dependents in case of death of the workman are two-thirds of the earnings. The minimum payable to a consort and one child in Quebec is \$50 per month or \$12.50 per week if there is more than one child; in Manitoba and Saskatchewan the minimum is \$12.50 per week (\$15 per week in Manitoba if there is more than one child). In Ontario the minimum for a consort and one child is \$55 per month, irrespective of the workman's earnings, with an additional \$10 per month for each additional child unless the total compensation exceeds the workman's average earnings in which case compensation is an amount equal to such earnings or \$55, whichever is greater.

The rate for permanent total disablement in all provinces except Saskatchewan, is a weekly payment for its duration equal to 66⅔ p.c. of the average weekly earnings; in Saskatchewan it is 75 p.c.; except in New Brunswick, the Acts fix a minimum weekly sum that must be paid unless earnings fall below that minimum, in which case a sum equal to the earnings is paid. This minimum is \$12.50 in Nova Scotia, Ontario, Alberta, and British Columbia, and \$15 in Manitoba, Quebec and Saskatchewan. For partial disablement similar provision is made in all provinces, except New Brunswick, Saskatchewan and Alberta, i.e., two-thirds of the difference in earnings before and after the accident; in Saskatchewan, 75 p.c. In New Brunswick and Alberta, the amount is determined by the Board according to the impairment of earning capacity, but in New Brunswick two-thirds of the diminution of earnings is payable for temporary partial disablement. In Nova Scotia, if there is little or no difference, in New Brunswick in any case, or in the other provinces if the difference is 10 p.c. or less, a lump sum may be given.

The average earnings on which compensation is based must be computed in the manner best calculated to give the rate per week or per month at which the worker was remunerated but must not exceed \$2,500 in British Columbia, Saskatchewan and Ontario, and \$2,000 in the other provinces. If the workman's earnings at the time of the accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. The rate of compensation of workmen under 21 years of age may be later increased if it is probable that their earning power, had the injury not occurred, would have increased.

The statistics of workmen's compensation published by the provincial boards are not on a comparable basis and are therefore presented as a series of tables.

**19.—Operations of the Nova Scotia Workmen's Compensation Board, 1935-44**

NOTE.—Estimates for outstanding claims not included. Statistics for the years 1917-34 are given at p. 757 of the 1938 Year Book.

**Section 9.—Strikes and Lockouts**

Statistics of strikes and lockouts in Canada have been collected by the Dominion Department of Labour since its establishment in 1900. Summary tables of the figures with details as to strikes and lockouts during 1944 will be found in the *Labour Gazette*, March, 1945, at p. 383, and for 1945 in the February, 1946, issue at p. 244.

**Strikes and Lockouts in Recent Years.**—The expansion of employment since 1939 has been much greater in manufacturing than in other industries. Strikes have been most numerous also in this group of industries in recent years. In 1945, more than 63 p.c. of the strikes and 85 p.c. of the time loss were in manufacturing. In coal mining, there were fewer strikes in 1945 than in the previous year but the time loss was much greater as a result of one strike which caused about 80 p.c. of the total time loss in this industry. Three of the largest strikes in the year, and strikes in sympathy with one or other of them, involved more than 43 p.c. of all the workers and about 86 p.c. of the total time loss. One strike alone in manufacturing caused 74 p.c. of the total time loss.

## 27.—Strikes and Lockouts, 1936-45

NOTE.—For the years 1901-20, see the 1933 Year Book, p. 763, and for 1921-35 the 1938 Year Book, p. 763.

<sup>1</sup> None reported.<sup>2</sup> Less than one-tenth of one per cent.<sup>3</sup> Includes non-ferrous smelting.<sup>4</sup> Includes erection of all large bridges.<sup>5</sup> Includes water service.

**Causes and Results of Strikes and Lockouts.**—In each year since the record was begun in 1901 and up to 1944 the most important cause of strikes has been the demand for wage increases. Strikes have varied in number with fluctuations in union activity; stoppages have been caused by the workers' demands for recognition of a union or for the dismissal of non-unionists. Since 1936 union questions have caused many strikes, more than in the earlier peak years of union activity, 1903-07 and 1914-19. In 1945, strikes for increased wages, reduced hours and other changes caused only 4·5 p.c. of the total time loss, while strikes over union questions (particularly as to closed shop, union shop, maintenance-of-membership and check-off) caused almost 68 p.c. of the total time loss.

Since 1935 the proportion of strikes and lockouts settled by public conciliation services has increased. Up to 1935 about half were settled by direct negotiations between the parties. In 1945, more than half the strikes were settled by Dominion or Provincial Government agencies. Based on the number of non-agricultural workers in Canada, about 33 workers in every 1,000 were involved in strikes in 1945, as compared with 25 in 1944, 72 in 1943, 39 in 1942, 33 in 1941, 27 in 1940 and 20 in 1939. The time loss per 1,000 available work-days was 1·66 days in 1945, as compared with 0·54 in 1944, 1·14 in 1943, 0·51 in 1942, 0·55 in 1941, 0·39 in 1940 and 0·36 in 1939.

## Section 10.—Wage Rates and Earnings

## Subsection 1.—Wage Rates and Hours for Various Classes of Labour in Canada

Statistics of rates of wages and hours of labour have been collected for many years by the Dominion Department of Labour and were published, first, in the *Labour Gazette* and, later, in annual reports supplementary to the *Labour Gazette*.

The first of these Reports was issued in March, 1921. The records begin, in most cases, with the year 1901. Index numbers show the general movement of wage-rates for the main industrial groups as well as for individual industries.

In Report No. 26, revised index numbers based on the rates in 1939 were published for the period 1939-43. The index numbers on the base of rates in 1935-39, which were published in previous reports, were converted to the new base of 1939. The percentage changes for the years 1939 to 1944 shown by the revised index for the principal groups of industries do not differ materially from those shown by the previous index which was last published in the *Labour Gazette*, October, 1945.

The latest Report, No. 27, contains tables showing for many industries the average rates for selected occupations along with the predominant ranges of rates. The standard or normal hours of labour per week in the various industries are also shown. The statistics are given by provinces or regions and for some industries by cities. The figures for the various manufacturing industries are shown by provinces in nearly all cases and, where possible, for Montreal and Toronto also. Tables 29-31 show the index numbers of wage rates by main industrial groups and by industries.

From 1930 to 1933 there was a general decrease in wage-rates but several groups showed increases in 1934 and increases have been general each year since that time, averaging 3.9 p.c. in 1940, 8.9 p.c. in 1941, 8.3 p.c. in 1942, 8.4 p.c. in 1943 and 3.5 p.c. in 1944. Some of the increases in 1940 and many in subsequent years took the form of a cost-of-living bonus which was adjusted from time to time to the official cost-of-living index number in accordance with the Wartime Wages Control Order. After Feb. 15, 1944, cost-of-living bonuses were incorporated in the basic rates.

## 29.—Index Numbers of Wage Rates for Certain Main Groups of Industries in Canada, 1921-44

(1939=100)

NOTE.—Figures back to 1901 may be obtained from Report No. 27, "Wage Rates and Hours of Labour in Canada, 1944", published by the Department of Labour as a Supplement to the *Labour Gazette*.

**Wages of Farm Labour.**—Current rates of wages paid to male hired help on farms have more than doubled since 1940, the year in which the series of wage rates shown in Table 33 was begun. Average wage rates are shown on the basis of rates paid with board provided by the employer and without board. The information is provided by farm correspondents located in all provinces. Although rates of wages during the winter period are normally somewhat lower than those paid during the harvesting season, wage rates at Jan. 15, and also at May 15, rose sharply in all provinces during the period under review. The only reductions in 1945 were in daily wage rates in Manitoba and Saskatchewan at Aug. 15.

## 33.—Average Wages of Male Farm Help per Day and per Month, as at Jan. 15, May 15, and Aug. 15, 1942-45

NOTE.—Figures for 1940 and 1941 are given at pp. 732-733 of the 1943-44 Year Book.

### Subsection 2.—Earnings in the Census Year 1941

The total number of wage-earners in Canada reporting earnings for the census year ended June 2, 1941, was 2,769,461, or 98.3 p.c. of all wage-earners 14 years of age or over, and the total amount of their earnings was \$2,402,895,700. Of this number, 2,078,734 were males with earnings amounting to \$2,064,500,900 or 85.9 p.c. of the total, and 690,727 were females with earnings of \$338,394,800. Table 34 gives final figures of total earnings and average earnings by wage earners in each of the provinces for 1941. Preliminary data, by counties, are given in Bulletin E-1 of the 1941 Census, and for cities of 30,000 population or over in Bulletin E-3.

**34.—Wage-Earners, 14 Years of Age or Over, by Sex, Together with Total and Average Earnings during the Twelve Months Prior to the Census Date, June 2, 1911, by Provinces, 1911.**

NOTE.—Comparable data for the Censuses of 1911, 1921 and 1931 are given at p. 789 of the 1937 Year Book.

## Section 11.—The Regulation of Wages and Hours of Labour

Except as an emergency measure, the regulation of wages and hours of persons in private employment in Canada is within provincial jurisdiction, and all the provinces, except Prince Edward Island, have legislation on the subject. In New Brunswick wage orders apply only to particular establishments or to particular industries in certain areas. In 1945, New Brunswick enacted a new Minimum Wage Act and Nova Scotia a Male Minimum Wage Act. Neither statute has been proclaimed in force.

In Nova Scotia, the present minimum wage law applies only to women, while in Ontario, though the Act applies to both sexes, there is only one order (relating to the textile industry) which applies to men. In Alberta and British Columbia, separate orders are issued for men and women. In Manitoba, Quebec and Saskatchewan orders apply to both sexes in so far as both are employed in the industries covered.

In Quebec, under the Collective Agreement Act, hours and wages established through collective agreements have been generalized by Orders in Council in given districts or throughout the Province. The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta and Part II of the Manitoba Fair Wage Act provide that schedules of wages and hours, drawn up by conferences of employers and employees called by the Minister of Labour, may be made binding on all employers and employees in the industries concerned. In Nova Scotia, New Brunswick and Manitoba, however, the Acts can be applied only to specified industries.

Legislation in all provinces, except Prince Edward Island, which applies to mines, factories or in some cases to shops, restricts the hours of work of women and young persons or, in some provinces, of all workers. In Quebec, Ontario, Alberta and British Columbia, there are also statutes dealing only with hours of work. Several Minimum Wage Acts give authority for the regulation of hours as well as wages.

### Subsection 1.—Minimum Wages

Table 35 shows the rates in effect in December, 1945, for several classes of establishments in the principal cities. In Alberta, in British Columbia and in Manitoba the rates shown for men apply throughout the province. In other provinces, lower rates are in effect in all or part of the remainder of the province. The rates given in the table apply to the hours specified or, except in Montreal and Winnipeg, to the normal work-week of the establishment if less.

The rates in effect under provincial minimum wage legislation at the end of 1941 are summarized in the 1942 Year Book, pp. 714-716 and changes made in 1943 are given at p. 796 of the 1945 edition. Revisions made in 1944 and 1945 are as follows: in Saskatchewan in 1944 the minimum rate was raised in cities to \$16.80 per week and in towns to \$14 for all classes of experienced workers within the Act.

In Alberta, Orders in 1944 and 1945 fixed a weekly minimum of \$15 for experienced women workers not exempted by special Orders or agreements and \$20 for males 19 years or over.

In Manitoba, a 1945 Order fixed a minimum hourly rate of 30 cents for experienced women workers in cities and of 26 cents for those outside cities, and a rate of 35 cents an hour for all experienced male workers throughout the Province who are covered by the Act.

A British Columbia Order under the Female Minimum Wage Act applying to telephone and telegraph employees was replaced by one which raised the minimum from \$15 weekly to \$2.80 daily.

In Quebec a new Order sets minimum rates for several classes of workers in charitable institutions and hospitals.

### 35.—Minimum Weekly Rates for Experienced Workers in the Principal Cities of Canada, December, 1945

Item and Type of Establishment	Halifax <sup>1</sup>	Montreal	Toronto <sup>1</sup>	Winnipeg <sup>2</sup>	Regina	Ed- monton <sup>3</sup>	Van- couver <sup>1</sup>

<sup>1</sup> Applies to females only. <sup>2</sup> Applies to females; 35 cents for men. <sup>3</sup> Applies to females; \$20 for men 19 years of age or over. <sup>4</sup> Except in theatres and amusement places where they apply to a 48-hour week only and in offices to 48 hours or the usual number if less. <sup>5</sup> 48 hours for factories, except in specified cases, and for offices; 54 hours for shops, beauty parlours, theatres and for women in laundries; 60 hours for hotels. <sup>6</sup> In shops, beauty parlours and hotels rates apply to 40 hours or more; in theatres and amusement places to 40 hours; and for office workers to 37½ hours. <sup>7</sup> Hourly rates.

### Subsection 2.—Wages and Hours under Quebec Collective Agreement Act, Manitoba Fair Wage Act and Industrial Standards Acts of Other Provinces

The Collective Agreement Act of Quebec provides that collective agreements voluntarily entered into by representatives of employers and trade unions or groups of employees may be submitted to the Minister of Labour and if, in his opinion, the terms of an agreement that relate to wages, hours and apprenticeship determine

these conditions for a preponderant proportion of the industry, they may, by Order in Council, be made compulsory for the industry affected in the district covered by the agreement. The terms are enforced by joint committees of employers and the trade unions in the industry.

The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta provide that, following a petition from employers or employees in an industry, either in a particular area or throughout the Province, the Minister of Labour for the Province may call a conference of representatives of employers and employees, at which a schedule of wages and hours for the industry, in the area specified, may be agreed upon. Such a schedule, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may be made binding by Order in Council in a designated zone. The Minister may also establish an advisory committee, on which employers and employees are represented, to assist in carrying out the provisions of the schedule. The Nova Scotia Act applies only to construction work in Halifax and Dartmouth and the New Brunswick Act to construction work exceeding \$25 in value and to work on motor-vehicles.

Part II of the Manitoba Fair Wage Act provides similar machinery for fixing wages and hours in barbering and hairdressing, printing and engraving, shoe-repairing, wood-sawing, baking, laundering and dry cleaning, road trucking and hauling, and any other industry brought within its scope by Order in Council.

A list of the industries and occupations governed by Orders in Council under the above Acts at the end of 1939 was published in the 1940 Year Book, p. 793, and later changes are to be found in subsequent editions, the 1943 and 1944 changes being on pp. 797-798 of the 1945 edition. In 1945, agreements in Quebec made legally binding applied to employees of hospitals and religious institutions at St. Hyacinthe, the wholesale trade at Sherbrooke, municipal employees at Kenogami and commercial establishments at Mégantic and St. Hyacinthe, while agreements for aluminum workers at Arvida, La Tuque and Shawinigan Falls, and municipal workers at Joliette were repealed. In Ontario, a schedule for carpenters in Goderich, and in Alberta schedules for laundering and dry cleaning in Calgary and for barbers in Lethbridge were made binding.

### Subsection 3.—Regulation of Hours

The limitations on hours which are imposed by statute or under statutory authority were summarized in the 1942 Year Book, pp. 717-718. In Ontario the Hours of Work and Vacations with Pay Act, 1944, provides for an 8-hour day, a 48-hour week and also for one week's holiday with pay in each year for employees in "industrial undertakings", which include every establishment and undertaking and all work in or about any industry, and every business, trade or occupation prescribed by the regulations. The Act does not apply to persons employed in a managerial, supervisory or confidential capacity and other exemptions include most professions, employees in agriculture, domestic service and of railway and steamship companies. The Ontario Industry and Labour Board may authorize longer hours if agreed upon by organizations or representatives of employers and employees, in cases of accident or urgent work and in war industries.

In Saskatchewan the Annual Holidays Act, which has not been proclaimed in force, provides for an annual holiday of two weeks with pay for all employees, except those working on farms, ranches or market gardens.

## CHAPTER XX.—WELFARE SERVICES

### CONSPECTUS

	PAGE		PAGE
SECTION 1. DOMINION AND PROVINCIAL WELFARE SERVICES.....	784	Subsection 3. Workmen's Compensation	796
Subsection 1. Dominion Welfare Services.....	784	Subsection 4. Old Age Pensions and Pensions for Blind Persons.....	796
Subsection 2. Provincial Welfare Services.....	786	Subsection 5. Government Annuities...	798
SECTION 2. WELFARE STATISTICS.....	794	Subsection 6. Mothers' Allowances...	800
Subsection 1. Unemployment Insurance	794	Subsection 7. The Care of Dependent and Handicapped Groups.....	804
Subsection 2. Family Allowances.....	794	Subsection 8. The Canadian Red Cross; The Victorian Order of Nurses; The Saint John Ambulance Association...	804

From a historical as well as a constitutional point of view, the responsibility for social welfare in Canada has rested on the provinces, which, in turn, have delegated a large share of this responsibility to the municipalities. It is but recently, relatively speaking, that the concept of public welfare has grown to include more than poor relief, sanitation and institutions of confinement and that the provinces have undertaken to meet these expanding needs by maintaining institutions of one kind or another, child welfare services, and other specialized programs. Thus the provinces themselves have latterly assumed the major role in public welfare and, even though the municipalities have continued to carry substantial burdens, the Provincial Governments have taken a direct part in co-ordinating the work and assisting by subsidies and other means. At the same time, an increasing measure of responsibility on the part of the Dominion has been in evidence: this was especially noticeable, during the pre-war depression decade, in the fields of unemployment relief, agricultural relief and old age pensions. While constitutional authority has not changed, except with respect to unemployment insurance, the pressure of events in the depression decade obliged the Dominion Government to help the provinces to shoulder their financial burdens by grants-in-aid, etc. To-day, therefore, the responsibility of the Dominion Government for problems arising in these fields has become fairly well established by custom rather than constitutional change, although what remained of unemployment relief after the introduction of unemployment insurance was turned back in 1941 to the provinces. A real effort was made by the Rowell-Sirois Commission (see pp. 79-80) to bring about the necessary redistribution of administrative and financial responsibility essential to the proper functioning of the Dominion and Provincial authorities in the complicated economic circumstances that are an outgrowth of the present century.

This effort has been carried forward, but with varying success, in the proposals of the Dominion Government to the provinces with regard to social security, during the recent Dominion-Provincial Conferences, November, 1945-April, 1946 (see pp. 80-81).

Historically, welfare work begins with the care of the most needy and the care of the indigent, aged and infirm, homeless orphans, dependent, neglected and delinquent children, and the dependent deaf and blind. These classes have been recognized as a public responsibility since the earliest days, but the actual work of caring for them was, in great degree, undertaken by religious and philanthropic

bodies, of which many were incorporated during the latter part of the nineteenth century. In many cases, government aid was granted, with official inspection as the natural corollary. As early as 1752 an orphanage was opened at Halifax, N.S., for orphans and deserted children and in Upper Canada an Act was passed, towards the end of the century, to provide for the education and support of orphan children. In the different colonies before Confederation, under various Acts of the Legislatures, houses of refuge, homes for the aged, orphanages and other charitable institutions were provided. The most serious welfare problems, particularly in Upper and Lower Canada, were those connected with immigration. Many immigrants were destitute on their arrival and were dependent on charity. In 1822, an immigrant hospital was opened at Quebec for the care of the indigent sick. Throughout the colonies before Confederation an interest in child welfare found expression in the incorporation of numerous institutions for friendless orphans and physically incapacitated children. These orphanages were largely supported by the philanthropy of societies or individuals and, if grants of public money were received, the management was subject to government supervision. During this period, the orphanage was all that was available to the child who lacked normal home care.

Since Confederation, the principle has become generally recognized that the indigent, aged and infirm, orphans, dependent and neglected children, the deaf and dumb and the blind should be the responsibility of the State. Numerous Acts of the Provincial Legislatures have recognized municipal and provincial responsibility for these classes of the population by establishing institutions, welfare services, or other provisions for their care. In every province of Canada, public welfare organizations now exist to look after their protection and well-being. Child-welfare work, as it is known to-day, was not recognized as a special field for case work until toward the close of the nineteenth century. Now, noteworthy contributions are being made in this field by the Departments of Child Welfare of the Provincial Governments, the Children's Aid Societies, Juvenile Immigration Societies and Day Nurseries. Even to-day, although government inspection is now universal, much of this work is carried on by other than official agencies. Of the 468 institutions that reported at the Census of 1941, 76 were controlled by provincial and county governments, 61 by municipalities, 104 were under private auspices and 227 under religious and fraternal organizations.

The field of welfare work is a very wide one and includes the work of many organizations. The National Physical Fitness Act proclaimed on Feb. 15, 1944, while administrated in close association with the Provincial Departments of Health and Welfare, is fundamentally not a welfare activity but one of health. At pp. 806-808 an account of the progress made by the National Council of Physical Fitness is outlined and the student of welfare work should not overlook that material.

Other aspects of public health are also closely related to the field of social welfare. The Canadian Welfare Council gives national direction to, and co-ordinates the work of, the local welfare agencies; specialized organizations, such as the Canadian National Institute for the Blind and the Canadian Federation of the Blind, occupy a somewhat similar role in their particular fields. The various Community Chest organizations and service clubs assist welfare work by helping to finance local organizations, and the great work of the Young Men's Christian Association, the Young Women's Christian Association, the Catholic Youth Organization and the Young Men's Hebrew Association, the Boy Scouts, Girl

Guides and similar youth organizations in what may be described as preventive rather than curative work cannot be overlooked. Day nurseries proved of increased value under wartime conditions, enabling many mothers to play their part in increasing Canada's output of war material. Most of the activities of these organizations are not susceptible to statistical measurement. In the case of the Canadian Red Cross, the Victorian Order of Nurses, and the Saint John Ambulance Association, their fields of effort are more closely related to public health and are therefore treated in Chapter XXI.

An outline of the welfare work being carried on by the Dominion Government and by each of the Provincial Governments follows. Details and statistics under each heading are presented in Section 2.

## Section 1.—Dominion and Provincial Welfare Services\*

### Subsection 1.—Dominion Welfare Services

The earliest entry of the central government into the sphere of welfare work was coincident with the earliest days of British rule, the welfare of the Indian inhabitants as accepted wards of the Government having been at first the concern of the military authorities and, after 1845, of the central civil government. Statistics regarding the administration of Indian and Eskimo affairs are given in the Miscellaneous Administration Chapter of this volume. The Dominion Government extended its responsibilities in the welfare field after the War of 1914-18, when it was found necessary to supplement the earlier schemes of re-settlement, limited to land grants or scrip in lieu thereof, by the establishment of a Department of Soldiers' Civil Re-establishment, which looked after the welfare of ex-service men and fitted them into the general economic scheme. With the general ageing of the ex-service men and the outbreak of the War of 1939-45, welfare services have been developed as outlined in the succeeding paragraphs. Also, the severe depression in the early 'thirties, with the consequent drain upon the financial resources of the provinces and municipalities, forced the Dominion Government into the relief field and finally led to the establishment of a nation-wide plan of unemployment insurance.

**Family Allowances.**—The Family Allowances Act, 1944, was introduced for the purpose of equalizing opportunity for the children of Canada. The allowances are paid monthly to mothers and must be spent exclusively towards the maintenance, care, training, education and advancement of the child. If it is satisfactorily shown to the authorities that the money is not being spent for this purpose, payment can be discontinued or made to some other person or agency on behalf of the child. It is further set out in the Act that if any person is dissatisfied with a decision as to his right to be paid an allowance or as to the amount of an allowance payable to him or as to any other matter arising under this Act, he may appeal against such decision to a tribunal established for that purpose.

All children under sixteen years of age are eligible for an allowance, including Indians and Eskimos. To be eligible, children must have been born in Canada or have lived in this country for three consecutive years except the children of men or women who have served in the Armed Forces. Children of members of the three Armed Services are eligible even though born outside the country. A further

\* The material in Section 1 is based on information and statistics obtained from the Dominion and Provincial authorities responsible for the administration of the various welfare services.

important clause in the eligibility regulations concerns education. The allowance is not payable to a child who, being above the age of six years and physically fit to attend school, fails to do so or to receive equivalent training.

The allowances, which are tax free, are paid by cheque monthly at the following rates:—

Children under 6 years of age.....	\$5
Children from 6-9 years of age inclusive.....	\$6
Children from 10-12 years of age inclusive.....	\$7
Children from 13-15 years of age inclusive.....	\$8

The allowance ceases when a child reaches the age of sixteen.

The allowances are reduced after the fourth child as follows: one dollar reduction for the fifth child, two dollars each for the sixth and seventh child and three dollars for each additional child.

It is expected that a gross disbursement of over \$250,000,000 will be distributed annually under the Family Allowances Act. The net additional cost to the country is estimated at \$200,000,000. For statistics see pp. 794-795.

**Unemployment Insurance.**—In 1940, by an amendment to the British North America Act, the Dominion Government was given complete jurisdiction in the field of unemployment insurance and since that time a national system of unemployment insurance administered by the Unemployment Insurance Commission has been in operation. (See Labour Chapter, pp. 751-759.)

**Veterans Allowances.**—In addition to war pensions, allowances are paid to certain non-pensionable veterans at 60 years of age, or earlier if the veteran is permanently unemployable or to eligible veterans who, having served in a theatre of actual war, are incapable and unlikely to become capable of maintaining themselves because of economic handicaps combined with disabilities. (See Chapter XXVIII.)

**Dependents Allowances.**—The Dependents' Allowance Board is charged with the payment of allowances to dependents of members of the Armed Forces, the main purpose of which is to promote the well-being and efficiency of His Majesty's Forces by relieving financial anxieties with respect to the domestic welfare of their dependents.

The Board consists of a civilian chairman and representatives from the three Armed Services and the Treasury, and administers all allowances. Where investigation is necessary, it is carried out through the field staffs of the Department of National Health and Welfare, the Soldier Settlement Board, provincial welfare services, and private welfare organizations such as Children's Aid Societies and Family Welfare Bureaus.

A special Family Welfare Section has been instituted by the Board to administer allowances when the recipient is infirm or where domestic difficulties necessitate the intervention of a third party. The wife of a service man may request administration of her allowance in case of illness or of her financial affairs becoming involved. The Section maintains the closest co-operation with the various welfare agencies.

**Supplementary Grants Fund.**—A Dependents' Board of Trustees has been set up to administer this fund, which is designed to give supplementary assistance in special cases of difficulty and hardship where it can be shown that the regular

allowances are inadequate. The Board operates with the assistance of Regional Dependents' Advisory Committees that have been established in the chief cities of the Dominion.

**Veterans Unemployment Assistance.**—The Department of Veterans Affairs does not place veterans in employment, but works closely with the Department of Labour in connection with veterans' problems. Out-of-work benefits are authorized in certain cases as outlined in Chapter XXVIII.

**Government Annuities.**—For thirty-seven years the Dominion Government has carried on a service that permits and encourages Canadians, during the earning period of their lives, to make provision for their old age. The necessary legislation was passed in 1908 as the Government Annuities Act (c. 7, R.S.C., 1927, amended by c. 33, 1931). This Act is now administered by the Minister of Labour, and provides that any person resident or domiciled in Canada may purchase an annuity from the Government of Canada. For statistics of annuities, see pp. 798-800.

**The Dominion Government in Co-operation with the Provinces.**—Each of the provinces, as indicated below, has adopted the Dominion Old Age Pension Act which has been extended to cover the needy blind. Statistics for all provinces are given at pp. 796-797.

### Subsection 2.—Provincial Welfare Services

Provincial health and welfare services are, in many instances, interrelated and administered by the same Provincial Departments. In view of this fact, it is sometimes difficult to set a definite demarcation between the two services. So far as possible, this Section deals with the well-being of the people with regard to social aid, child welfare, allowances and pensions for mothers and the aged and blind. Public health and related institutions are dealt with in Chapter XXI, pp. 805-830.

**Prince Edward Island.**—The Department of Public Welfare of the Province of Prince Edward Island administers the following statutes:—

- (1) The Public Health Act.
- (2) The Old Age Pensions Act.
- (3) The Children's Act.
- (4) The Vital Statistics Act.
- (5) The Electrical Inspection Act.

It also administers direct relief payments, and extra-mural treatment for tuberculosis, and supervises all Governmental medical services, including the Provincial Sanatorium, the Hospital for the Insane, and the Infirmary for the care of the aged and infirm. In the Province there are two orphanages, one Protestant and one Roman Catholic, operated as private institutions. Two Children's Aid Societies are active and operate under authority of the Children's Act.

There is no system of *workmen's compensation* or *mothers' allowances* in the Province, but persons employed under the Dominion Government are provided for under the schedules of the New Brunswick Workmen's Compensation Act.

**Old Age Pensions and Pensions for the Blind.**—The Province has co-operated in the Dominion-Provincial Old Age Pension plan since July 1, 1933, and with the amendment to the Act providing for the payment of pensions to blind persons since Dec. 1, 1937. For statistics see pp. 796-798.

**Nova Scotia.**—The Public Welfare Services are administered by the Minister of Public Welfare in the Department of Public Welfare and are specifically concerned with the following matters:—

*Child and Family Welfare.*—This branch of the Department includes:—

- (1) Child protection.
- (2) Assistance to and supervision of Children's Aid Societies.
- (3) Supervision of children in adoptive and foster homes.
- (4) Family case work.
- (5) Psychiatric service for children and families under (3) and (4), and for the public schools on request of the Education Department.
- (6) Inspection of all child-caring institutions and ownership of, and responsibility for, the operation of the Nova Scotia Training School for Mentally Deficient Children.

These Services include six juvenile courts and probation officers; financial aid and technical advice given to 12 Children's Aid Societies; inspection of foster homes and shelters; inspection of and per capita financial assistance to reformatory institutions. Most of the wards of the Children's Aid Societies are in either free foster homes or family boarding homes, although some are in the regular child-caring institutions. Maintenance is paid on a 40-60 p.c. basis between the Province and the municipalities. Financial provision for the maintenance of children in reformatory institutions is at the rate of \$175 per annum from the municipality and an equal amount from the Province. For children in the Training School for the Mentally Defective, the municipality pays \$200 per child per annum, all other expenses being borne by the Province.

A considerable volume of work is also done for the Dominion Government in connection with soldiers' families.

*Mothers' Allowances.*—Enabling legislation was passed in 1930 and became effective on Oct. 1 of that year. Statistics under the Act are given at p. 800-804.

*Public Charities.*—These services are varied and include aid to persons who have no legal claim on any municipality in the Province or any specific poor district but who require public assistance.

*Old Age Pensions and Pensions for the Blind.*—The Province has co-operated with the Dominion-Provincial Old Age Pension plan since March, 1934, and with the amendment to the Act providing for the payment of pensions to blind persons since Oct. 1, 1937. For statistics see pp. 796-798.

In addition to the above matters, the following subjects, though not part of the public welfare program proper, are controlled by the Province.

*Homes for the Aged.*—Although no provincial grants are paid to homes for the aged operated by municipalities, religious or private bodies and subject to provincial inspection, many such homes receive public funds indirectly. In certain cases old age pensioners boarding in these homes may pay their pensions directly to the institution or by private agreement pensions are paid to the institution by the Pension Board of the Department, when the pensioner is incapable of managing his own affairs.

*The Workmen's Compensation Board.*—This legislation was passed in 1915, but did not come into operation until Jan. 1, 1917. The subject of workmen's compensation is not as directly related to welfare as the other services dealt with.

The Province, in its control of trade and industry, enacts compensation legislation and supervises its administration, but workmen's compensation is financed by and is essentially the responsibility of industry. See also pp. 766-769.

**New Brunswick.**—The welfare services provided by the Government of New Brunswick consist of:—

- (1) Children's Protective Service.
- (2) Mothers' Allowances.

The administration of the Children's Protection Act has been transferred from the Attorney-General's Department to the Department of Health and a Child Welfare Officer has been appointed. Children's Aid Societies have been organized in all counties, some of them employing full-time paid agents. Orphanages are under the auspices of religious or private bodies, but there are certain municipal institutions that receive adults and children: these are subject to provincial inspection.

*Mothers' Allowances.*—An Act was passed in 1930 which did not become effective until Aug. 18, 1943. A new Act was passed on Apr. 6, 1944. See p. 800.

*Old Age Pensions and Pensions for the Blind.*—The Province has co-operated with the Dominion-Provincial Old Age Pension plan since July 1, 1936, and with the amendment to the Act providing for the payment of pensions to blind persons since Sept. 1, 1937. For statistics see pp. 796-798.

*Homes for the Aged.*—These are operated under municipal, religious, fraternal or private auspices and are subject to provincial inspection.

*Workmen's Compensation.*—The Workmen's Compensation Act was passed in 1918 and came into force on Jan. 2, 1919. See also pp. 766-769.

**Quebec.**—The Quebec Department of Health and Public Welfare administers a comprehensive plan of social welfare, including aid to, and the supervision of, the numerous welfare institutions operated by religious orders or private charity. In Quebec the administrative policy of welfare services is somewhat different from that of other provinces in that the responsibilities ordinarily assumed by the public authorities are, in many cases, delegated to recognized religious and private welfare agencies, aided by substantial grants from public funds. The Provincial Relief Act provides for assistance without undue interference with the life of the family.

A noteworthy feature in the line of preventive work is that carried out by the Family Registry Office, whereby children from tubercular families, who have not been infected but for whom there is reason to be apprehensive, are boarded out with rural families. This Office works in conjunction with local ministers and doctors, as regards the moral and physical supervision of these children.

Another aspect in the welfare program in this Province is the colonization scheme, whereby needy families are settled on the land in newly opened districts, and are supervised and granted financial aid until they become self-supporting.

The Government of the Province of Quebec is aware that the future of the Province and the survival of its institutions including the numerous grave problems bearing on the future of youth depend largely on the long-term policies adopted by the Government in regard to such matters. An Act was passed at the 1946 Session of the Quebec Legislature to set up a new Department of Social Welfare and Youth which shall study such problems and administer all laws of the Province

of Quebec having for their object the social welfare of the people and assistance to youth in preparation for its future. At the time of going to press the new Department had not been organized.

*Mothers' Allowances.*—The Needy Mothers' Assistance Act, 1937, became effective in December, 1938. For statistics of operations under the Act, see p. 802.

*Workmen's Compensation.*—The Quebec Workmen's Compensation Commission was established in 1928 by authority of cc. 79 and 80 of the Statutes of that year. The Act was brought into force by proclamation on Mar. 22, 1928, operations of the Commission commencing as of Sept. 1, 1928. Under this Act, the Quebec Commission did not insure employers against their liability. On Apr. 4, 1931, a new Act (21 Geo. V, c. 100), effective Sept. 1, 1931, provided for such insurance, along the lines of the Workmen's Compensation Act of Ontario. See also pp. 766-769.

*Old Age Pensions and Pensions for the Blind.*—The Province has co-operated with the Dominion-Provincial Old Age Pension plan since Aug. 1, 1936, and with the amendment to the Act providing for the payment of pensions to blind persons since Oct. 1, 1937. For statistics, see pp. 796-798.

**Ontario.**—The Department of Public Welfare administers the following forms of assistance:—

*Youth and Child Welfare Division.*—In this Division are included:—

- (1) The Children's Aid Branch, which is responsible for the administration of the Children's Protection Act, the Children of Unmarried Parents Act and the Adoption Act; supervision of 53 Children's Aid Societies in the Province. During the War of 1939-45 the Province co-operated with the Dominion Government in certain war services—dependents allowances, supplementary grants, compassionate leave, and other family welfare problems.
- (2) The Day Nurseries Branch under which day nurseries and school care projects are operated to care for children of employed mothers.
- (3) The British Child Guests Branch, which continued the supervision of British children evacuated from the United Kingdom who still remained in Ontario.
- (4) Supervision of Institutions for children.

*Mothers' Allowances.*—Since 1920, allowances have been paid by the Province to widows and other necessitous mothers. In addition to basic allowances, free medical services, including necessary drugs, are provided, as well as a 20 p.c. cost-of-living bonus. In addition, the Commission has discretionary authority to increase any beneficiary's allowance, up to \$10 per month, where need is shown.

*Soldiers' Aid Commission.*—Through the Commission, advice and emergency assistance is extended to ex-service men of the War of 1939-45 and the War of 1914-18, and their families.

*Old Age Pensions and Pensions for the Blind.*—The Province has co-operated in the Dominion-Provincial Old Age Pension plan since Nov. 1, 1929. Benefits reach a maximum of \$25 per month, plus a \$3 maximum cost-of-living bonus paid by the Province, which also provides free medical services, including necessary drugs. In 1937, Ontario became the first province to pay pensions to the blind under provisions of the Old Age Pensions Act and providing the same benefits.

*Homes for the Aged.*—Homes for the aged are incorporated under the Houses of Refuge, the Houses of Refuge in Districts, and the Charitable Institutions Acts, and are operated by cities, counties, districts and religious or benevolent societies under provincial supervision.

*Unemployment Relief.*—The Unemployment Relief Act of Ontario authorizes contribution on the part of the Department of Public Welfare toward alleviation of distress of unemployable persons. The municipalities of the Province are reimbursed 50 p.c. of the expenditures, while in the unorganized areas the Province administers and pays the total cost of aid rendered.

*Workmen's Compensation.*—The Workmen's Compensation Act came into force on Jan. 1, 1915. See pp. 766-770.

**Manitoba.**—For the organization of the Department of Health and Public Welfare of the Province see p. 811. The Welfare Division of the Department of Health and Public Welfare has two broad sub-divisions:—

- (1) Public Welfare Services and Assistance includes the administration of Mothers' Allowances throughout the Province, social assistance in the unorganized territory of the Province, and the care of transient non-residents. It also includes child care and protection services and the supervision of five Children's Aid Societies covering practically the whole Province. Grants to charitable institutions are made upon the recommendation of the Welfare Supervision Board. A Public Welfare Advisory Committee appointed by the Lieutenant-Governor in Council in May, 1945, acts in an advisory capacity to the Minister on all aspects of public welfare.
- (2) Old Age Pensions and Pensions for the Blind. As at May 1, 1945, the Welfare Division assumed responsibility for the general administration of old age pensions and pensions for the blind. For statistics see pp. 796-98.

*Mothers' Allowances.*—Manitoba was the first Province to enact this type of legislation, the Act having come into force on Mar. 10, 1916. Statistics of operations are given on p. 803.

*Social Assistance.*—This includes provision for unemployable and unemployed persons in unorganized territory and the maintenance of aged and incurable persons from unorganized territory in and outside institutions.

*Workmen's Compensation.*—The Workmen's Compensation Act came into force Jan. 1, 1917. See also pp. 766-770.

**Saskatchewan.**—The Department of Social Welfare is charged with the responsibility of administering all Acts concerning welfare which have been placed on the Statutes of the Province. The Department is divided into three main Branches:—

- (1) Child Welfare Branch.
- (2) Old Age Pensions Branch.
- (3) Social Aid Branch.

In addition, the Department is divided into the following Divisions: Administrative Division, Welfare Services Division, Mothers' Allowance Division, Home for the Infirm, and Industrial School for Boys.

The Social Welfare Board which is comprised of the Deputy Minister as chairman and the Directors of the three main Branches deals with all applications for assistance under the various Acts administered by the Department.

*Child Welfare.*—This Branch supervises and directs the Child Welfare activities of the Province and deals mainly with delinquent children, wards, children of unmarried parents, orphans and neglected children, education of blind children, foster homes, children's shelters, supervision of institutions, and adoptions.

One children's shelter is being operated by the Branch at the present time and another is in the course of construction which will provide for the needs of orphaned and neglected Métis children in the northern and outlying districts of the Province. There are Children's Aid Societies in the four larger cities, three of which maintain shelters. During the war years, the Branch conducted a considerable number of investigations for the Dominion Government in connection with the welfare of families of men in the Armed Forces.

Some of the older wards are being maintained in homes and on farms under Wage Agreements and after allowing a reasonable amount for their requirements arrangements are made to place the balance of their wages in a trust fund to be used at a later date for establishing them.

All institutions or homes operated in the Province for the betterment and well-being of children are subject to supervision and inspection by the officials of the Branch so that a uniform standard may be maintained.

Where a child, other than a child born out of wedlock, is committed as a ward of the Minister of Social Welfare, the judge committing the child may order the municipality in which the child was residing at the time of apprehension to pay the sum of not less than \$3.50 per week to be applied towards the maintenance of the said child.

*Old Age Pensions and Pensions for the Blind.*—This Branch administers the payment of Old Age Pensions and Pensions for the Blind under supervision of the Social Welfare Board which was set up under the provisions of the Social Welfare Act, 1944. Saskatchewan was the second Province in Canada to inaugurate the payment of Old Age Pensions, the agreement became effective on May 1, 1928, while the payment of Pensions to the Blind commenced on Nov. 15, 1937. For statistics, see pp. 797-798.

*Social Aid.*—This Branch makes provision for indigent persons in co-operation with the various municipal units of the Province; such aid is shared on a 50-50 basis by the Province and the municipality concerned. Social aid is provided for transient indigent persons, the cost of which is borne entirely by the Province. The Branch operates a farm on which it employs a number of Métis families who were formerly recipients of social aid. This farm is proving to be a valuable asset and progress is being made in re-establishing these people by teaching them modern farm methods, and in making them self-supporting by paying them a wage for services rendered.

Provision for the payment of Mothers' Allowances is made in the Child Welfare Act and was originally enacted in 1917 as the Mothers' Pensions Act. More recently the administration of Mothers' Allowances has been made the responsibility of the Social Aid Branch. See also p. 803.

*Industrial School for Boys.*—The Department has assumed the management and operation of the School which provides corrective training and academic instruction for delinquent boys of from 10 to 16 years of age.

*Home for the Infirm.*—The Department also operates a Home for the Infirm which provides accommodation for approximately 90 aged and infirm people. The Department also has supervisory powers over all privately operated homes in the Province which render similar service. Plans are under way for the construction of another Home which will be operated by the Department and accommodate approximately 150 to 200 aged and infirm persons.

*Workmen's Compensation.*—The Workmen's Compensation Act came into force July 1, 1930. See pp. 766-770.

*Alberta.*—The Department of Public Welfare established Apr. 1, 1944, administers a comprehensive program of welfare activities. The following statutes are administered by the Department:—

- (1) Bureau of Public Welfare.
- (2) Métis Population Betterment Act.
- (3) Child Welfare Act.
- (4) Relief Liability Act.
- (5) Improvement District Act, as to Sects. 43, 44 and 45.
- (6) Unemployment Relief Act.
- (7) Old Age Pension Act.
- (8) Mothers' Allowance Act.
- (9) Homes for Aged or Infirm Act.

*Bureau of Public Welfare.*—This Bureau, commonly known as the Relief Branch, provides assistance to the needy who have no municipal residence. It also provides grants and aid to municipalities who have given assistance to their unemployed employable residents.

Two hostels for men are maintained at Edmonton and Calgary where destitute single men without permanent municipal domicile are cared for, and two welfare depots are maintained in the country. Single ex-service men are cared for in Calgary and Edmonton without being institutionalized. The Bureau has also been successful in the rehabilitation of families by resettling them on the land.

*Métis Rehabilitation Branch.*—The rehabilitation of the Métis—those of mixed Indian and White blood who do not qualify under the Indian Act—has been carried out by the setting aside of tracts of land as Métis Settlement Areas, where the colonists have exclusive fishing, hunting and trapping rights and where they are encouraged to engage in lumbering, agriculture and stock-raising. Educational and social services are provided and government-operated stores sell goods at cost price.

*Child Welfare Branch.*—Care of children who become wards of the Province either by neglect, delinquency or by indenture and agreement come under the exclusive control of the Child Welfare Commission. They may be placed either in foster homes, in paid boarding homes or in institutions depending on the individual cases. Maintenance in boarding homes or institutions is paid by the Province. The Province does not maintain any reform schools for delinquent children. These are placed in carefully selected homes under constant supervision and are inspected periodically by Departmental officials.

The education of deaf and blind children is the responsibility of the Department of Education, which maintains children in special schools outside the Province and grants are made to sight-saving classes and classes for sub-normal children in the larger cities.

*Old Age Pensions Branch and Pensions for the Blind.*—The Province has been co-operating in the Dominion-Provincial Old Age Pension plan since Aug. 1, 1929, and with the amendment to the Act providing for the payment of pensions to blind persons since Mar. 1, 1938. For statistics, see pp. 797-798.

*Mothers' Allowance Branch.*—The Mothers' Allowance Act was passed in 1919 and became effective in that year. For statistics see pp. 802-804.

*Homes for Aged or Infirm Act.*—This Act came into effect on Mar. 28, 1945, and provides for the payment of a grant to municipalities maintaining either aged or infirm residents in licensed homes.

**British Columbia.**—Welfare Services operated by the Province come under the administration of the Provincial Secretary's Department. Such services include:—

- (1) Child Welfare.
- (2) Mothers' Allowances.
- (3) Social (family and individual) Allowances.
- (4) Industrial Schools.
- (5) School for the Deaf and Blind.
- (6) Home for the Aged and Provincial Homes.
- (7) Provincial Infirmaries.
- (8) Old Age Pensions.

In British Columbia all social workers—general, medical and psychiatric—are employed by, and come under, the direction of the Social Assistance Branch and are included in the Field Service Division. The general worker in the field is trained to do case work for all of the services mentioned above.

Medical services and prescribed drugs are provided for all types of social assistance cases. In organized municipalities the Province bears half the cost and in unorganized territory the whole cost.

*Child Welfare.*—The Child Welfare Division of the Social Assistance Branch is responsible for child welfare work and covers the protection of children, adoptions, placements in foster homes, children of unmarried parents, juvenile delinquency, etc. In Vancouver and Victoria the work is carried out in co-operation with Children's Aid Societies but elsewhere all activities are directly administered by the Branch.

*Mothers' Allowances.*—Mothers' Allowances are administered by the Social Assistance Branch, the Act being in force since July, 1920. For statistics see p. 804.

*Social Allowances.*—Social allowances are administered by the same Branch under the Social Assistance Act that came into force on Apr. 1, 1945. Under this Act provision is made for all those categories that are not otherwise dealt with. The Province contributes 80 p.c. of the cost for municipal cases.

*Old Age Pensions and Pensions for the Blind.*—Old Age Pensions are administered by a Board under the jurisdiction of the Provincial Secretary's Department and all social work is done by the Field Service Division of the Social Assistance Branch. Supplementary assistance is also being given to old age pensioners for the protection of their health and comfort. Pensions have been paid to blind persons since Dec. 1, 1937. For statistics see pp. 797-798.

*Homes for the Aged.*—The Province operates a Home for the Aged and a Provincial Home, together with three Provincial Infirmaries. The cities of Vancouver and Victoria also operate homes for the aged. Social services in cities and municipalities have been amalgamated in order to do away with dual administration and combined services act in close co-operation with the health services.

*Workmen's Compensation.*—The Workmen's Compensation Act, effective Jan. 1, 1917, provides compulsory accident insurance in almost every industrial occupation carried on in the Province. See pp. 766-771.

## Section 2.—Welfare Statistics

### Subsection 1.—Unemployment Insurance

Because of its close relationship to labour and the fact that unemployment insurance is administered with selective service and manpower, it is considered advisable for the present to continue to carry these statistics in the Labour Chapter. They will be found at pp. 751-759.

### Subsection 2.—Family Allowances

Information regarding the payment of family allowances is given under the subsection on Dominion Welfare Services at pp. 784-785.

Table 1 gives the age distribution of the population under 16 years at the date of the Census of 1941. These figures were used as the basis of estimates upon which family allowances were originally made in the Family Allowance Act of July, 1945, and will serve as a guide to maximum registration possible, as compared with total registration shown in Table 2, until the official Census of 1951.

Detailed information concerning classification of families by number of children, for the nine provinces, is given in Table 2, p. 1166 of the 1945 Year Book.

#### 1.—Population Under 16 Years of Age by Specified Age Groups, by Provinces and Territories, 1941

### Subsection 3.—Workmen's Compensation

Workmen's Compensation can be regarded from two standpoints: (1) the industrial, and (2) its relationship to the broad field of public welfare. It is perhaps one of those border-line cases where either point of view is justified (see Subsection 8 for others). Nevertheless, because Workmen's Compensation<sup>61</sup> (unlike unemployment insurance for instance) is entirely the responsibility of industry and is closely associated with labour and the compensation of the worker, it is felt that the statistics regarding it are more logically dealt with in the Labour Chapter where they will be found at pp. 766-771. The welfare aspect of payments made to workers injured in the course of their duties should not, however, be overlooked.

### Subsection 4.—Old Age Pensions and Pensions for Blind Persons

**Old Age Pensions.**—Legislation respecting old age pensions (R.S.C., 1927, c. 156) was adopted by the Dominion Parliament in 1927. Under the provisions of this statute the Dominion Government reimbursed each province participating in the Dominion scheme to the extent of one-half of the provincial expenditure for old age pensions. An amendment passed at the 1931 Session of Parliament (c. 42, Statutes of 1931) provided that the Dominion contribution to the provinces be increased from 50 p.c. to 75 p.c. of the provincial disbursements for old age pensions. The Dominion contribution of 75 p.c. of provincial disbursements was made effective from Nov. 1, 1931; the provinces have since been reimbursed on this basis.

By Orders in Council passed under the authority of the War Measures Act the maximum pension has been increased from \$240 to \$300 a year and the maximum income (including pension) from \$365 to \$425 a year.

The Dominion Old Age Pensions Act is now operative in all provinces and in the Northwest Territories.

Conditions under which pensions are granted and the qualifications required of applicants are set forth at p. 705 of the 1941 Year Book.

**Pensions for Blind Persons.**—By an amendment to the Old Age Pensions Act in 1937, provision was made for the payment of pensions to blind persons over the age of 40 years. The requirements which an applicant for a pension in respect of blindness must fulfil are set forth at pp. 706-707 of the 1941 Year Book. The maximum income (including pension) is higher in the case of a blind pensioner. The maximum income in different cases is set forth in the Old Age Pensions Act. Amendments made under the War Measures Act apply to blind pensioners.

At Dec. 31, 1945, the average pension received in each province was as follows: P.E.I., \$22.35; N.S., \$24.17; N.B., \$24.61; Que., \$24.71; Ont., \$24.69; Man., \$24.80; Sask., \$24.83; Alta., \$24.45; B.C., \$24.58.

**Subsection 5.—Government Annuities**

For over thirty-seven years the Dominion Government has carried on a service that permits and encourages Canadians to make provision for their old age during the earning period of their lives. The necessary legislation was passed in 1908 as the Government Annuities Act (c. 7, R.S.C. 1927, amended by c. 33, 1931). This Act is now administered by the Minister of Labour.

A Canadian Government Annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in quarterly instalments (unless otherwise expressly provided) for life and may be guaranteed for ten, fifteen, or twenty years in any event. The minimum amount of annuity obtainable on the life of one person or on the lives of two persons jointly is \$10 a year and the maximum amount is \$1,200 a year.

Annuity contracts are of two classes, deferred and immediate, under each of which there are various plans available. Deferred annuity contracts are for purchase by younger persons desiring to provide for their old age, purchase being made by monthly, quarterly or yearly premiums, or by single premium. Immediate annuity contracts are for purchase by older persons who wish to obtain immediate regular incomes through their accumulated savings.

The property and interest of the annuitant in a contract for a Government annuity is neither transferable nor attachable. In the event of the death of the annuitant before the date fixed for the annuity to begin, all money paid is refunded to the purchaser or his legal representatives with interest at the rate of 4 p.c. per annum, compounded annually.

Although in the majority of cases annuities issued on the lives of individuals have been purchased by the individuals themselves, provision is made in the Act whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members. This provision has been taken advantage of increasingly in the past few years through group annuity plans, under which the purchase money required is derived partly from the wages of employees and partly from employer's contributions.

The group annuity plans now in effect cover a wide variety of industries and many municipal corporations, well distributed throughout Canada. Benefits under annuities sold under group plans in recent years are now providing retirement income for many of the older members of the groups.

From Sept. 1, 1908, the date of the inception of the Government annuities system, up to and inclusive of Mar. 31, 1945, the total number of annuity contracts and certificates issued was 125,500. Of these, 13,316 have been cancelled, leaving in force on Mar. 31, 1945, 112,184 contracts and certificates. The total amount of purchase money received during the same period was \$271,826,219.

Up to Mar. 31, 1945, 270 corporations, institutions and associations had entered into agreements with the Government to purchase annuities, and on that date approximately 33,000 employees or members were purchasing deferred annuities thereunder, agreements being drawn up according to specific requirements in each case. The number of annuities for the year under review included 9,313 deferred annuity certificates issued under the system whereby one group contract is issued for each group, the employee or member receiving a certificate.

A Royal Commission on the Taxation of Annuities and Family Corporations was appointed in November, 1944, and presented its report on Mar. 29, 1945. In the Summary of Part I of the Report, with reference to annuities, there was a recommendation that the capital element represented in contractual annuities should be exempt from taxation under the Income War Tax Act.

This recommendation was implemented in 1945 under an amendment [Section 3, (1) (b)] to the Act, and became effective with respect to 1945 annuity income.

#### 7.—Government Annuities, Contracted for, and Purchase Money Received, Years Ended Mar. 31, 1925-45

NOTE.—Figures for the years 1909 to 1924 will be found at p. 873 of the 1942 Year Book.

<sup>1</sup>Undetermined.

<sup>2</sup>Amount of immediate annuities.

#### Subsection 6.—Mothers' Allowances\*

All provinces except Prince Edward Island provide for allowances to mothers who are widowed or who, for other reasons, are without means of support. Manitoba was the first to enact such legislation in 1916. Five other provinces followed between 1917 and 1920. The Nova Scotia and Quebec Acts came into effect in 1930 and 1938, respectively. A New Brunswick statute of 1930, proclaimed in effect in 1943, was replaced by a new Act in 1944.

\* Revised from data obtained from the provinces concerned, under the direction of A. MacNamara, C.M.G., Deputy Minister, Department of Labour.

Except in Alberta, where 25 p.c. of an allowance is borne by the municipality, the whole cost is provided from provincial funds. In Quebec, not more than 5 p.c. of the amount of the allowances paid may be imposed on municipalities, but no levy has been made under this provision.

Each Act stipulates that an applicant must be a resident of the province and, except in Alberta, have resided there for a certain period. Alberta merely requires that the husband should have had his home in the Province at the time of his death, committal to an institution or desertion of his wife.

All the statutes, except those of Saskatchewan and Alberta, stipulate either that an applicant must be a British subject or the widow or wife of a British subject or that her child must be a British subject. In Nova Scotia, the applicant herself must be a British subject. In Quebec, she must have been a British subject for 15 years or by birth. In New Brunswick and Manitoba, the child is eligible if he is a British subject, even if the mother is not. In British Columbia, a woman may be eligible if she is or was a British subject by birth or naturalization.

An applicant must be a widow, or a wife whose husband is mentally incapacitated, or, except in Alberta, permanently disabled. The British Columbia Act specifies a disability which may reasonably be expected to continue for at least one year. In New Brunswick, Nova Scotia and Saskatchewan, a mother is declared eligible if her husband is confined to a sanatorium for tuberculosis. Foster-mothers caring for children whose parents are dead or disabled are also eligible, except in Nova Scotia and Alberta.

Deserted wives who meet the conditions of the Acts are eligible in all provinces, except Nova Scotia, but the period that must elapse after desertion varies from province to province. Mothers who have been divorced or legally separated from their husbands for two years are eligible for allowances in British Columbia, and a mother who is divorced may be paid an allowance in Saskatchewan. In British Columbia and Saskatchewan, the wives of inmates of penal institutions are eligible.

In Nova Scotia, New Brunswick and Saskatchewan, allowances may be paid in respect of a legally adopted child. In Manitoba, Saskatchewan, Alberta and British Columbia, allowances are paid in some cases for children born out of wedlock.

Mothers of one or more children are eligible in New Brunswick, Quebec, Ontario, Saskatchewan, Alberta and British Columbia. In Nova Scotia and Manitoba, an allowance has been payable in respect of one dependent child only if the mother was incapacitated, and in respect of another child who is dependent because of physical or mental disability but the Nova Scotia Act, as amended in 1945, makes eligible the mother of one dependent child if she has residing with her a husband permanently disabled or if the welfare of the one child requires it. The age-limit for children is 16 except in Manitoba where it is 14, or over 14 if the child is incapable of self-support. On certain conditions, allowances may be paid in British Columbia for a child between 16 and 18 and also for a child living temporarily apart from its mother. In Alberta and New Brunswick, when a child reaches 16 and is attending school, payments may be continued until the end of the school year and in New Brunswick, no allowance may be paid for a child not attending school as required by law.

**Rates of Allowances.**—In *Nova Scotia*, a maximum of \$80 per month and in *New Brunswick* \$60 is fixed by statute, but in other provinces the administrative authority fixes the rate. *Quebec* allows \$25 monthly to a woman with one dependent

child in cities and towns of over 10,000 population; \$20 in other localities and \$5 for each additional child. An extra \$5 is allowed when the beneficiary is unable to work, or when a disabled husband is living at home. In no case is the total to exceed \$50. In *Ontario*, the maximum for a mother and one child is \$35 per month in a city, \$30 in a town of over 5,000 and \$25 in a rural district, with \$5 for each additional child. The maximum in *Manitoba* excluding the allowance for winter fuel, for a mother and one child is \$36 monthly; a mother and two children \$54, and additional allowances for other children up to \$100, plus an increase up to \$2 per month per person with a maximum of \$10 per month per family. In addition, \$11 a month is provided for a disabled father at home. In *Saskatchewan*, the maximum allowance payable was increased in 1945, and ranges from \$300 per year for a mother with one child to \$900 for a mother with ten children. The allowance may be increased by \$120 where there is an incapacitated husband living at home. The allowance in *Alberta* is not to exceed \$35 per month for a mother with one child and rises to \$100 where there are nine children or more. In *British Columbia*, the maximum monthly allowance is \$42.50 for a mother with one dependent child, \$7.50 for each additional child under 16 and a further \$7.50 for a totally disabled husband living at home.

The following tables give statistics for the different provinces. For New Brunswick data are available only from May 1, 1944; from that date to Oct. 31, 1944, 760 allowances were granted, 2,300 children were assisted and \$194,525 was paid in benefits.

**Subsection 7.—Care of Dependent and Handicapped Groups**

The field of the Care of Dependent and Handicapped Groups in Institutions is covered quinquennially. The figures published at pp. 677-682 of the 1943-44 Year Book are, therefore, the latest that will appear until the results of the 1946 Census of Institutions are made available.

**Subsection 8.—The Canadian Red Cross; the Victorian Order of Nurses; and the Saint John Ambulance Association**

Each of these organizations carries on important welfare work but their major activities are related more directly to public health than to welfare and for this reason the data regarding their operations are given in the Public Health Chapter of this volume, pp. 828-830.

## Section 1.—Administration

In Canada public health is administered by Dominion and Provincial Governments through their respective Health Departments.

The Dominion has jurisdiction only respecting such public health matters as are exclusively international, national and interprovincial. The Dominion Government makes grants to Provincial Departments of Health and to voluntary organizations engaged in public health work. Treatment for members and ex-members of the Armed Forces is provided by the Department of Veterans Affairs in veterans services and public hospitals.

The Department of National Health and Welfare Act authorized the establishment of the Dominion Council of Health which is responsible for correlating and co-ordinating the activities of Provincial Departments of Health. The Dominion Council of Health was created originally in 1919 and comprises the Deputy Minister of Health of each of the provinces as well as a representative of agriculture, labour, and urban and rural women, respectively. The personnel includes a scientific adviser on public health. The Deputy Minister of National Health is the Chairman.

### Subsection 1.—Public Health Activities of the Dominion Government

The Act of Parliament (8 Geo. VI, c. 22, 1944) creating the Dominion Department of National Health and Welfare, clearly defines its functions. The Department is divided into two branches. The functions of the Welfare Branch are dealt with in the Chapter on Welfare Services, pp. 782-804, while those of the National Health Branch are: to protect the country against the entrance of infectious disease; to exclude immigrants who might become charges upon the country; to treat sick and injured mariners; to see that men employed on public health construction work are provided with proper medical care; to set the standards and control the quality of food and drugs; to control the importation and exportation of habit-forming drugs such as morphine, cocaine, etc.; to care for lepers; to promote and conserve the health of civil servants and other government employees; to co-operate with the

provinces with a view to preserving and improving the public health; to conduct investigation and research into public health. To carry on this work the following Divisions have been organized within the Health Branch:—

Blindness Control	Narcotic
Child and Maternal Health	Nutrition
Civil Service Health	Proprietary or Patent Medicine
Dental Health	Public Health Engineering
Epidemiology	Quarantine and Immigration Medical
Food and Drug Laboratory	Service and Sick Mariners
Hospital Design	Venereal Disease Control
Industrial Health	Advertising and Labels
Industrial Health Laboratory	Laboratory of Hygiene
Mental Health	Tuberculosis Control

On Nov. 1, 1945, responsibility for the health of Indians and Eskimos was transferred from the Department of Mines and Resources to the Department of National Health and Welfare. This work is administered by the Superintendent of Indian Health Services.

In 1945, a Directorate of Health Insurance Studies was established in the Health Branch for the purpose of studying existing facilities and future requirements in the field of medical, hospital, dental and nursing services and for the purpose of studying various economic methods of providing such services, including health insurance.

**The National Physical Fitness Program.\***—This program is at present administered under the Welfare Division of the Department of National Health and Welfare, although it has very close association with both welfare and health.

The National Physical Fitness Act (c. 29, 1943) came into force by proclamation on Oct. 1, 1943, and by Order in Council P.C. 509 of Feb. 15, 1944, and P.C. 1394 of Mar. 2, 1944. The legislation sets up a National Council on Physical Fitness (composed of not less than three and not more than ten members) of which the National Director of Physical Fitness is Chairman. The Provinces are represented on the present Council either by their Provincial Directors of Physical Fitness, or by representatives from their Provincial Departments of Health or Education, or by persons closely associated with recreation.

Financial assistance is given to any province that has signed an agreement with the Dominion Government as provided in the Act. Within the limits of the National Physical Fitness Fund, set up in the Consolidated Revenue Fund for the purpose, the Dominion Government undertakes to pay one dollar for every dollar a province spends on its program of physical education, sports and recreation. Up to Mar. 31, 1946, the amount appropriated by Parliament for the above purpose was \$275,000 and agreements had been signed by Prince Edward Island, Nova Scotia, Manitoba, Saskatchewan, Alberta and British Columbia. In all nine provinces, however, there is great interest in the physical fitness program. The province retains the right to conduct its own program, with no interference from the Dominion Government.

\* Prepared under the direction of Major Ian Eisenhardt, National Director of Physical Fitness, Ottawa.

Considerable research is conducted with a view to finding how best to assist sports and games clubs and build up interest in fitness activities. Eleven Standing Committees have been set up by the National Council and are operating in the following spheres: Athletics and Olympic Games; Community and Rural Activities; Health Services and Medical Gymnastics; Sports and Games; Physical Education and the School; Gymnastics and Kindred Activities; Swimming, Life-Saving and Bathing Facilities; Leadership Training; Industrial Recreation; Cultural Activities; Youth Training and Universal Service.

The definition of the term "National Physical Fitness" is given in a resolution of the Council expressed as follows:—

"Be it hereby resolved that this Council interprets physical fitness to mean the best state of health, to which has been added such qualities as strength, agility and endurance, as are necessary for a life of maximum service to one's family and country . . . this Council stresses the fourfold nature of fitness, which is spiritual, moral, mental and physical, and that total fitness must originate in the home, the church, the school and the community. Further; that where local physical fitness programs are established, although government-sponsored, these programs should be a community enterprise, locally directed."

The great need for leadership training courses and additional degree courses in universities is fully realized by the Council. In all branches of the program the function of the Council is mainly to advise and stimulate rather than to administer or carry out a program. The actual carrying out of the program is a provincial and community task.

The response by the Provincial Governments has been highly gratifying. Although, at present, only Toronto University and McGill University (Montreal) have degree courses in Physical Education, such courses are planned or in prospect in several other universities across Canada. To this end, the Standing Committee of the Council on Leadership Training has, with the co-operation of leaders in physical education both in Canada and the United States, prepared a suggested model university course leading to a Bachelor of Science Degree in Health, Physical Education and Recreation. As many excellent leaders in physical fitness and recreation at the university level and at all other grades are serving, or have served, in the Armed Forces, the Council has recommended that the responsible Provincial Departments use this source of potential leaders. With the assistance of officials of the Departments of Labour and Veterans Affairs, the Division of Physical Fitness has been in a position to give advice regarding the setting up of training courses for ex-service personnel in the various provinces. With reference to such training, the following points were brought out:—

- (1) If such a training program is carried out through the Provincial Departments of Education as part of the vocational training program of the provinces, it would seem to be in order for the provinces to seek financial assistance from the Dominion Government under the provisions of the Vocational Training Co-ordination Act administered by the Department of Labour.
- (2) In any event discharged persons, who are given such training as part of their re-establishment in civil life, will be eligible for assistance by way of fees (if any) and training grants under Post-Discharge Re-establishment Order P.C. 5210.

Under the provisions of the Vocational Training Co-ordination Act, definite positions must be available before the Government will provide training. Since hundreds of communities have planned or are planning the building of Community Centres and other projects in physical fitness, sports, games and recreation, many positions are open for persons trained in physical education and recreation.

The Physical Fitness Division publishes and distributes information relevant to physical education, news from abroad, new ideas, and all aspects of the entire program of physical fitness. Films, dealing with various aspects of the work, are sent out and widely used.

### Subsection 2.—Public Health Activities of the Provincial Governments

**Prince Edward Island.**—During the session of the Legislature in March, 1946, the Department of Public Welfare, which administered both Health and Welfare, was reorganized under the title of "Health and Welfare" with one Minister responsible for both Divisions. The Health Division is under the supervision of the Chief Health Officer, who superintends the work of the Central Division including the Provincial Laboratory, and the Nursing and Sanitary Division. The Province is divided into five Districts: a public-health nurse is assigned to each District and is responsible for the inspection of school children, home visiting, home-nursing classes, immunizing clinics, etc. One nurse specially trained in venereal disease and another specially trained in tuberculosis have the entire Province as their field of operation.

The Provincial Laboratory which, until recently, has been engaged entirely on Bacteriology, has been enlarged, with the assistance of the Health Division of the Rockefeller Foundation, to include Pathology. A fully trained Laboratory Director was engaged on Jan. 1, 1946, and the Laboratory with its competent staff, will be of great assistance to the practising physicians of the Province.

The compilation of the vital statistics of the Province is now handled by the Welfare Division and all births, deaths and marriage certificates are micro-filmed for the Dominion Bureau of Statistics.

The Provincial Government operates a Provincial Sanatorium of 145-bed capacity under a Board of Commissioners and an annual grant is made to assist ex-sanatorium patients when required and to help other indigent tubercular persons awaiting admission and their families. Field work, in regard to tuberculosis, is a public health responsibility and clinics are held periodically at central points in the Province. The Prince Edward Island Tuberculosis League, a voluntary organization supported by the sale of Christmas Tuberculosis Seals, works in close co-operation with the Provincial Sanatorium and Health Division. This organization purchased a mobile X-ray unit in 1945 and is actively engaged in conducting a mass voluntary chest survey of the Province.

Provision for annual grants is made to the general hospitals which, in turn, accept as free patients all indigent persons requiring hospital treatment; the expenses for the operation of a hospital for the insane are borne practically in full by the Provincial Government.

The Department of Health operates two venereal-disease clinics, one at Charlottetown and the other at Summerside. Hospital beds are provided for selected cases and penicillin treatment is being widely administered with good results. All necessary medication is supplied free of charge to persons who are not within reach of public-health clinics.

**Nova Scotia.**—In the year 1934 a survey of the Nova Scotia Provincial Health Department was made through the courtesy of the International Health Division of the Rockefeller Foundation. A report with recommendations was submitted in 1935. In line with these recommendations an experimental health unit or division,

with a trained medical health officer in charge, was established in 1936 covering the eastern portion of the Province. This unit was in operation for a short time only when it was realized that an advanced step had been taken, and arrangements were made for others of a similar nature. As a result of these activities, the entire Province is now divided into five health districts with a competent medical director in charge of each and each has its staff of public-health nurses, sanitary inspectors, clerks and stenographers. With direction from the central Ministry of Health, these units carry on generalized public-health programs.

The city of Halifax with a trained medical health officer and staff constitutes another health unit. Then there are the part-time municipal services. Each town and municipality has a part-time medical health officer, board of health and sanitary inspector. The Provincial Unit Officers provide leadership and endeavour to standardize and correlate the work of the municipal services.

Attached to the central office are the Minister of Health, a Deputy Minister of Health, a Medical Statistician and Epidemiologist, a Public Health Engineer, a Superintendent of Public Health Nursing, Bacteriological, Pathological and Industrial Hygiene Laboratories, a division of Physical Fitness and Nutrition, a "Kenny" treatment clinic for poliomyelitis and a staff of statistical and general clerks and stenographers. A cancer clinic is operated in connection with the Victoria General hospital, a government-owned and operated institution.

In connection with the control of venereal diseases, a vigorous program is in operation throughout all of the health districts. Nurses, specially trained in the epidemiology of these diseases, are at work and ten treatment clinics with part-time directors are in operation.

**New Brunswick.**—The Department of Health, under the administration of a Minister of Health, was established in 1918. It provides the following services: general sanitation, including supervision of water supplies and sewage disposal; control of communicable diseases, including tuberculosis and venereal diseases; public health laboratory and the supply of biologicals; medical inspection of schools; collection of vital statistics; public-health nursing and child welfare; health education; and general supervision and co-ordination of the work of the sub-district boards of health. Under the Minister, the Department is directed by the Chief Medical Officer who is also Registrar General of Vital Statistics. The staff consists of a Director of Laboratories, 7 full-time Medical Health Officers, a Director of Public Health Nursing Service and, in addition, a part-time Director of Venereal Disease Clinics. The Province assumes all of the costs of sanatorium care for tubercular patients, all hospital care for poliomyelitis patients, and about 60 p.c. of the costs of hospital care for mental patients.

**Quebec.**—The Provincial Government, by legislation passed in 1941 (5 Geo. VI, c. 22), established a Department of Health and Social Welfare to deal with the administration of all matters concerning health, preventative medicine and social welfare (for the social welfare work undertaken by the Province see p. 788). From 1936 to 1941 provincial health matters were under the Department of Health which, in the former year, replaced the Health Service that operated under the Provincial Secretary. Since 1926 the system known as "County Sanitary Units" has been in operation. The purpose of the system is to provide a regular full-time service for each county or group of two or three adjoining counties that are included in the scheme. There are now 60 units of this kind, covering 73 counties. The Sanitary

Officers of the old districts, whose number is now reduced to 7, supervise the few counties not organized into sanitary units. Many municipalities, such as Montreal and Quebec, have their own Health Bureaus.

The Department of Health and Social Welfare maintains, in addition to its administrative service, the following divisions: Laboratories, Sanitary Engineering, Demography, Mental Health, Public Almshouses, Sanitary Districts and Units, Epidemiology, Industrial Health, Food (including Maternal Health and Child Welfare), Venereal Diseases, Tuberculosis, Educational Health, Dental Educational Health, Advertising, etc.

Service is rendered in the form of consultations, public lectures, school inspections, itinerant clinics of pediatry and tuberculosis, inquiries of all kinds, immunizations, sanitation improvement, etc. Twenty-seven anti-tuberculosis dispensaries have been established and 70 clinics of pediatry, including those sponsored by the Provincial Government.

An Act was introduced at the 1946 Session of the Quebec Legislature designed to combat the spread of tuberculosis in the Province. This Act authorized the Minister of Health to organize facilities for the detection of cases of tuberculosis and contribute to the construction and maintenance of sanatoria for consumptives and the training of specialists in the treatment of the disease as well as to carry on educational campaigns in the fight against tuberculosis. An Advisory Board was also set up to ensure a practical and efficient carrying out of the legislation. Reference is made at p. 788 to the legislation authorizing the establishment of a Department of Social Welfare and Youth in Quebec. When the new Department is organized there will no doubt be corresponding changes affecting the field of effort of the Department of Health and Public Welfare.

**Ontario.**—The Department of Health is organized under a Minister, a Deputy Minister and an Assistant Deputy Minister. The activities of the Department include, in addition to the usual public-health functions, the operation and maintenance of Provincial Mental Hospitals.

The public-health services of the Province are organized under the following branches: the Assistant Chief Medical Officer is responsible for the co-ordination of the work of Municipal Boards of Health; the Public Health Administration Branch is responsible for the planning, organization and development of the larger administrative Public Health Units now being developed in Ontario on a county basis; Public Health Nursing; Maternal and Child Hygiene; Dental Services; Epidemiology, concerned primarily with the control of acute communicable diseases. Separate Branches are organized to deal with each of the following special health services: Venereal Disease Prevention; Tuberculosis Prevention; Industrial Hygiene; Laboratory Services; Sanitary Engineering. Branches concerned with the supervision of certain aspects of medical treatment centres throughout the Province include: Public and Private General Hospitals; Nurse Registration.

Mental health services throughout the Province are organized under a Director of Hospitals, who is responsible for the administration and operation of 14 provincial mental hospitals. This Branch also organizes and operates a community mental health service through travelling clinics and district consultant psychiatrists.

Serving all branches of the Department of Health, as required, are: the Legal Branch; the Medical Statistics Branch; and the Main Office which includes divisions responsible for accounts, pay, purchasing, central registry, library, etc.

Particular emphasis has been given in recent years to the development of a more effective form of local public-health administration through the development of County Health Units with full-time well-qualified staff. There will be 14 such Units in operation as of July 1, 1946, and others will be instituted as soon as suitable qualified personnel become available.

**Manitoba.**—Manitoba has an organized Department of Health and Public Welfare. The Health and Public Welfare Act states that the Minister shall preside over, and have the management and direction of the Department, and the Department shall have administrative jurisdiction over all matters in the Province that relate to health and public welfare. The Department is organized into four main Divisions: General Administration; Health Services; Psychiatric Services; and Public Welfare Services.

The Division of General Administration includes the general executive offices, and the Sections of Farms Management, Statistics and Records, Accountancy, Provincial Laboratories, Health and Welfare Education, Administrative Research, and Physical Fitness.

The Division of Health Services has three Sections: (1) Environmental Sanitation, which consists of the Bureaus of Public Health Engineering, Food and Milk Control, and Industrial Hygiene. The latter Bureau was started in 1943 to take care of the many hazards now appearing in industries, particularly those that have to do with the personnel employed by industry. (2) Preventive Medical Services, which consists of the Bureaus of: Disease Control, responsible for the control of acute communicable disease, venereal diseases and tuberculosis; Maternal and Child Hygiene, responsible for an educational program in maternal health, infant health, pre-school health, and school health; Public Health Nursing, responsible for nursing education, field supervision, licensing and control of practical nurses, registry for crippled children, and general administration of all public health nursing services. (3) The Extension Health Services Section administers the provisions of the Health Services Act, and consists of the Bureaus of: Local Health Services, responsible for the establishment, supervision, and general administration of local health units throughout the Province, the control of local part-time medical officers of health, consultative services to local and municipal health departments in Manitoba; Diagnostic Services, responsible for the establishment and general administration of diagnostic units set up in general hospitals in Manitoba which are maintained by the Provincial Government; Medical Care, responsible for the approval of contracts for pre-payment medical care between a municipality, or municipalities, and the contracting physician, and for the payment of government grants to the municipalities in aid of such service under conditions specified in Part III of the Act; Hospitalization, responsible for the organization and supervision of establishment of hospital districts, medical-nursing units, and hospital areas under the provisions of Part IV of the Act; and for the supervision of hospitals throughout the Province and the payment of Provincial Government grants to them as provided under the Hospitals Aid Act.

The Division of Psychiatric Services consists of the Bureaus of: Mental Institutions, responsible for the supervision and control of the four institutions—the Psychopathic Hospital, Winnipeg, the Hospitals for Mental Diseases at Selkirk and Brandon, and the Manitoba School for Mentally Defective Persons at Portage la Prairie; Community Mental Health Services, responsible for out-patient services, child guidance clinics, services to courts and child-caring agencies, boarding-home care for the mentally ill, and teaching facilities.

**Saskatchewan.**—The Department of Public Health has been organized since 1923 under a Minister and a Deputy Minister and consists of 14 Divisions: (1) The Division of Administration co-ordinates the activities of the Department as a whole. (2) The Division of Public Health Nursing conducts a generalized program which includes all phases of public-health nursing; infant and maternal welfare, school work, venereal disease epidemiology, etc. This Division also supervises maternity grants and nursing homes. (3) The Division of Communicable Diseases administers provisions of the Public Health Act relating to control of communicable diseases and regulations relating thereto as follows: (a) prevention, notification and control; (b) prepared morbidity and mortality tables; (c) makes investigations; (d) enforces isolation and quarantine; (e) traces disease carriers. It distributes free vaccines and sera to doctors and hospitals, supervises anterior poliomyelitis clinics, supervises boards of health and medical health officers, supervises medical examination of food handlers, burial, disinterment and transportation of the dead and promotes immunization programs. (4) The Division of Sanitation has supervision of water-works, sewerage systems and drainage; food supplies including milk; urban and rural sanitation. (5) The Division of Laboratories does routine public-health work in bacteriology, serology, chemistry and pathology and provides clinical diagnostic laboratory service for rural physicians. (6) The Division of Vital Statistics administers the Vital Statistics Act and the Marriage Act. (7) The Division of Mental Services administers the Mental Hygiene Act. Its duties and responsibilities include the transportation and admission of patients to mental hospital; the care and treatment of patients in institutions for the mentally ill and mental defectives, and in the psychopathic ward in Regina. The division will develop and supervise mental hygiene clinics in connection with the preventive work of mental hygiene. The care and maintenance of patients in provincial institutions is at the expense of the Province. (8) The Division of Venereal Disease Control administers a program for the control of venereal disease, which is divided into the following functional sections: diagnostic and treatment services; epidemiology; and education. (9) The Division of Hospital Administration is responsible for all matters pertaining to hospital administration and all approved hospitals of the Province are under its supervision. (10) The Division of Health Education conducts a wide program of education for the purpose of modifying public opinion and attitudes in favour of higher standards of personal and community health. (11) The Division of Nutrition is largely educational in function, creating interest in better food habits; emphasis is placed on nutrition of children with special attention to school lunches. (12) The Division of Medical Services supervises payment of grants to physicians, dentists and approved hospitals for adequate medical services to needy residents in any part of the Province outside municipal jurisdiction, including a group known as "northern settlers". Insulin is supplied free to diabetics who are unable to purchase it. On Jan. 1, 1945, the Health Services Act came into effect, and its administration is partly under this Division. Medical, hospital and drug services are provided to old age and blind pensioners and their dependents, and to recipients of mothers' allowances and their children at the expense of the Province. Approximately 24,700 persons receive benefits under this Act. (13) The Division of Physical Fitness and Recreation stimulates, organizes and assists social, cultural and athletic

activities. (14) The Division of Industrial Hygiene provides a consulting service to management, labour and governmental agencies on matters pertaining to industrial health, evaluates occupational health hazards by scientific methods, including the operation of a laboratory of industrial hygiene; it makes recommendations as to the best means of controlling hazards and ensures that effective control measures are applied.

*Health Services Planning Commission.*—This Commission is charged with the task of preparing plans for providing all types of health services and facilities. It assesses the costs of these services and the needs of different areas for various kinds of services. It acts as an advisory and consultative body to local regions wishing to provide services for their residents. The Province has been divided into 14 proposed health regions, two of which have been established—Swift Current Health Region No. 1 and Weyburn-Estevan Health Region.

The Commission has certain administrative functions connected with the administration of medical care grants, recommendations regarding hospital areas, and capital expenditure grants to hospitals. It must approve of by-laws and contracts for all types of municipal schemes. The Commission is advised by a voluntary advisory committee of representatives of some 29 lay and professional associations in the Province.

*Cancer Commission.*—This Commission, created in 1930, has established consultative, diagnostic and treatment clinics for cancer at Regina and Saskatoon. Radon is manufactured at a plant in Saskatoon. The cancer services, including surgery at either clinic, are given at the expense of the Province.

*Poliomyelitis.*—Free treatment of cases is available at Saskatoon and Regina.

*Tuberculosis.*—Free diagnostic and treatment services are available in three sanatoria and a number of clinics operated by the Saskatchewan Anti-Tuberculosis League and financed by government grants and per capita charges on municipalities. Annual surveys are carried out throughout the Province, areas where the incidence is highest being given priority, and are financed by voluntary subscription.

**Alberta.**—The Department of Public Health administers all public health matters in the Province and includes the following Divisions: Communicable Diseases; Sanitary Engineering and Sanitation; Public Health Education; Laboratory; Tuberculosis Control; Public Health Nursing; Municipal Hospitals; Hospital Inspection; Social Hygiene; Vital Statistics; Mental Hygiene; Dental Hygiene; Entomology; and Cancer.

The following institutions are administered by the Department: Central Alberta Sanatorium; the Provincial Mental Hospital, Ponoka; the Provincial Training School, Red Deer; the Provincial Auxiliary Hospital, Claresholm; the Provincial Auxiliary Hospital, Raymond; the Provincial Mental Institute, Edmonton.

Free clinics for venereal disease are maintained at the following centres: Edmonton, Calgary, Medicine Hat, Lethbridge, Peace River, High Prairie, McLennan, and in the two provincial gaols. Arsenicals are provided free of charge to all private physicians treating venereal disease. Educational work on social hygiene is carried on by means of lectures, moving pictures, bulletins and radio talks.

Free treatment for infectious types of tuberculosis is provided for any bona fide resident, i.e., for any person who has resided in the Province for at least one year immediately preceding admission for treatment in the sanatorium. In addition to this service, two mobile X-ray clinics are in operation. These are made available through the co-operation of the Alberta Tuberculosis Association. The personnel is supplied and the mobile X-ray clinics are maintained by the Provincial Department of Public Health and the equipment is furnished by the Alberta Tuberculosis Association.

The Division of Public Health Entomology of the Provincial Department of Public Health was organized in May, 1944. Alberta has the distinction of being the first province in Canada to set up such a Division.

Under the authority of the Poliomyelitis Sufferers Act, 1938, provision is made for the free treatment in special hospitals of patients suffering from this disease. Provision is also made for academic instruction, vocational training, and rehabilitation of those suffering from paralysis resulting from this disease.

The Department of Public Health has inaugurated a cancer service in the Province. Diagnostic cancer clinics have been established at Edmonton and Calgary and are conducted weekly. Provision has been made whereby patients, referred to the diagnostic clinics by their own physicians and after examination found to require deep X-ray or radium therapy or surgery, are treated free of charge. Hospitalization may be authorized by the cancer clinic up to a maximum of 14 days where this is necessary for diagnostic purposes.

An Act to provide free hospitalization for maternity patients came into force on Apr. 1, 1944. Any woman: (a) who has been a resident of the Province for 12 consecutive months out of the 24 months immediately preceding her admission to hospital as a patient; (b) who by reason of circumstances arising out of the War—wives of men in the Armed Services—or by reason of other exceptional circumstances as declared by regulations made under the Act, shall be entitled to free hospitalization for herself and her new-born infant or infants for a maximum period of twelve days and shall be entitled to all public-ward maternity services provided by the hospital.

Alberta's Rural Health Districts have been operating successfully since 1931 so that their value is now well recognized and the various services available have become well organized. There are now 16 of these Health Districts.

In sparsely populated, outlying areas, 36 Provincial District Nurses provide a diversified medical and public-health service. These District Nurses are required to have special qualifications in obstetrical work.

Under an amendment to the Solemnization of Marriage Act, which went into effect July 1, 1945, each party to a marriage contract is required to have a specimen of blood taken by a qualified physician and forwarded to the Provincial Laboratory or other approved laboratory for serological examination. All positive serologic tests must be reported to the Director of the Division of Social Hygiene. Certain outlying areas in which medical service is not available may be exempted from these requirements.

**British Columbia.**—The Provincial Health Services of British Columbia are organized as a Branch of the Provincial Secretary's Department. The Provincial Health Officer who is in charge of the administration of the technical details of the

service has direct access to the Minister on all technical matters. The Lieutenant-Governor in Council functions as the Board of Health on all legislative matters dealing with the rules and regulations.

The Provincial Health Services are divided into two Bureaus—the Bureau of Administration and the Bureau of Local Health Services—and six Divisions.

The Bureau of Local Health Services is a part of the central office of the Provincial Board of Health and is under the direct supervision of the Assistant Provincial Health Officer. In addition to correlating the services of the various Divisions, it is responsible for technical supervision of all local health services. Such public-health specialities as maternal and child welfare, communicable-disease control, public-health dentistry, public-health nursing and some phases of industrial hygiene are all part of the responsibilities of this Bureau.

Different types of local health service have been developed in the Province of British Columbia. These include large City Health Departments, Health Units of which there are six in addition to those included in the Vancouver Metropolitan Area, public health nursing services and areas where part-time health officers and school medical inspectors are appointed from the practising physicians. A Health Unit consists of a full-time Medical Director who is a physician trained in public health, a number of public-health nurses determined by the population served, one or two trained sanitarians, and a statistical clerk.

The entire Province has been divided into Health Unit areas on a geographical basis and it is planned to organize three or four new units per annum. Substantial grants-in-aid toward public-health nursing and Health Unit services are paid by the Provincial Board of Health in addition to other services provided by the Board to the people. Special studies are being made of cancer and rheumatic fever with a view to developing programs to meet these problems. A nutrition consultant service has been established as part of the Bureau of Local Health Services. Close collaboration is maintained by the Nutrition Service with the Provincial Department of Education and Agriculture.

The Division of Public Health Engineering is responsible for all matters of environmental sanitation, including water supplies, sewage disposal, food and milk control, swimming pools, the supervision of the sanitation in lumber, mining, construction and cannery camps, certain phases of garbage disposal, shell-fish supervision, and housing.

The Division of Tuberculosis Control is responsible for the diagnosis and treatment of tuberculosis in the Province. This Division operates two tuberculosis hospitals—one at Tranquille and another adjacent to the Vancouver General Hospital at Vancouver. Three other hospital services are operated by the Division in conjunction with the Royal Jubilee Hospital and St. Joseph's Hospital at Victoria and St. Joseph's Oriental Hospital at Vancouver.

Tuberculosis diagnostic clinics are provided in the form of stationary clinics at the larger centres and four travelling clinics. In addition, two Survey Chest Clinic Units utilizing 4 x 5 film-equipment mounted in buses, provide free X-ray service to the larger centres and to all industries. Out-patient treatment and pneumo-thorax refills are available at all the stationary clinics and by specially instructed physicians throughout the Province at strategic points utilizing pneumo-thorax equipment provided by the Division. These services are paid for by the Division. In addition

special allowances, over and above other welfare assistance, are made to aid those patients suffering from tuberculosis and their families, and consultative and advisory service is furnished to local Health Departments, physicians and hospitals.

The Division of Laboratories is under the direction of a trained bacteriologist and serologist. In addition to the large main laboratory at Vancouver, it buys branch laboratory public-health service from hospitals at Victoria, Nanaimo, Prince Rupert, Kamloops, Nelson and Kelowna. Laboratory service and biological products are provided free to all physicians and Health Departments throughout the Province.

The Division of Vital Statistics is responsible for the registration of all births, deaths and marriages in the Province. It collects, compiles, tabulates, analyses and publishes statistics on adoptions and divorces, as well as on vital statistics.

The Division of Venereal Disease Control operates diagnostic and treatment clinics at Vancouver, Victoria, Trail, Oakalla Gaol, New Westminster, Prince Rupert and in the Peace River area in co-operation with the local health units. Physicians are paid for venereal disease treatment of indigents where no clinic service is available. Free drugs, consultative and advisory service, including public-health education, is available throughout the Province. The case finding and case holding is the duty and responsibility of local health service but the Division provides public health nurses specially trained in epidemiology to assist the local health personnel.

The Division of Public Health Education is now being organized: in the meantime public health educational programs are developed by all the Divisions and Bureaus.

## Section 2.—Institutional Statistics\*

Under authority granted by the Dominion Government in 1930, the Dominion Bureau of Statistics has, since that date, co-operated with the provincial authorities through the Census of Institutions, and now collects, on a Dominion-wide basis, statistics for the following types of institutions: (1) *Hospitals*—institutions primarily engaged in the prevention and cure of physical sickness and disease, such as hospitals for the sick, sanatoria, and institutions for incurables and those under the heading "Dominion" in Table 1. (2) *Mental and neurological institutions*—such as asylums for the insane, institutions for the feeble-minded, epileptic, etc., devoted to the treatment and care of mental ailments. (3) *Charitable and benevolent institutions*—caring for the poor and the destitute of all ages, such as homes for the aged, county refuges, orphanages, etc. (4) *Penal and corrective institutions*—having for their purpose the reclamation of criminals and the reformation and training of delinquent boys and girls. Institutional statistics, as summarized in Table 1, may be regarded as dealing with three main types of social pathology, viz., physical, mental and moral. The latest statistics available regarding charitable institutions are given at pp. 677-682 of the 1943-44 Year Book (see p. 804).

\* Revised by J. C. Brady, M.A., Chief of the Census of Institutions, Dominion Bureau of Statistics, Ottawa.

<sup>1</sup> Excluding incurable, mental and tuberculosis institutions.<sup>2</sup> Not included in totals.<sup>3</sup> These institutions report at five-year intervals: the figures given are for the year 1941.

### Subsection 1.—Statistics of Hospitals, Other Than Mental\*

From Table 1 it is seen that in 1944, in addition to the 592 public hospitals for acute diseases, there were 267 private hospitals, 15 hospitals for incurables, 40 tuberculosis sanatoria and 40 units for tuberculosis patients in other hospitals.

\* A complete list of all hospitals in Canada, giving name, location, type and bed accommodation for 1944, is obtainable on application to the Dominion Bureau of Statistics, Ottawa.

### 2.—Summary of Reporting Public and Private Hospitals in Canada, 1940-44

NOTE.—Figures include hospitals and homes for incurables, but do not include Dominion, mental, or tuberculosis hospitals.

Item	1940	1941	1942	1943	1944

<sup>1</sup> These institutions are classified in detail in Table 1.<sup>2</sup> One children's hospital did not report.<sup>3</sup> One general hospital did not report.<sup>4</sup> Includes 8 general hospitals in N.W.T. reporting: 3 salaried doctors, 23 graduate nurses, 78 total personnel, 5 X-ray departments, 3 clinical laboratories, 1 physio-therapy department, 1,896 admissions, 174 live births, 2,201 patients under care during the year, 1,972 discharges, 89 deaths and 43,287 patient days; 2 general hospitals did not report.<sup>5</sup> Includes 1 private hospital in N.W.T. with 1 salaried doctor, 4 graduate nurses, a total of 12 personnel and 1 X-ray department; 145 admissions, 22 live births, 172 patients under care during the year, 163 discharges, 1 death and 1,538 patient days.

**Organized Services in Public General Hospitals.**—Organized services, which are analysed in Table 4, may be defined as specialized hospital departments or services in charge of specialists with up-to-date equipment and a technical staff specially devoted to problems in the indicated fields. Facilities available in a hospital merely for the use of general practitioners are not considered as organized services. Only organized services in public general hospitals are considered here and not such organized services in public hospitals other than general (as shown in the first part of Table 1) nor those in private, Dominion, tuberculosis and mental hospitals. It is, however, in the larger public general hospitals that the majority of such organized special services are to be found. Many of the smaller public general hospitals have facilities for study and treatment in the fields indicated here, but since they are not organized services as defined above, such facilities are not included in the figures. In 1944, of the 592 public hospitals for acute diseases, 237 had organized medical staffs with 7,644 staff doctors.

#### 4.—Organized Services and Staffs in Public General Hospitals, by Provinces, 1944

NOTE.—Dashes in this table indicate that no organized service has been reported in the case so indicated.

**Out-Patient Departments.**—Out-patient departments are operated in connection with hospitals or other institutions, and treat patients who do not occupy beds in the hospital. The extension of out-patient services to patients of modest means has far-reaching and beneficial effects. It may replace admission to hospital, or may serve to secure necessary and beneficial hospitalization. As a general rule out-patient departments are subsidized from the funds of the general hospital and separate records are not kept. Until a uniform system of accounting is adopted, it will not be possible to give the average cost per patient.

The statistics of Table 5 are rendered more complicated than is desirable because of lack of uniformity in the methods of reporting patients and treatments. The majority of hospitals report both patients and treatments.

## 5.—Out-Patient Departments of Public Hospitals, by Provinces, 1944

**Tuberculosis Institutions.**—The statistics regarding institutions for the treatment of tuberculosis shown in Table 6, include special units for the treatment of tuberculosis in general hospitals as well as the specialized sanatoria shown separately in Table 1. The deaths in these institutions from tuberculosis in 1944 were only 38.5 p.c. of the total deaths from the disease in Canada as shown under Vital Statistics at p. 160 of this edition. However, the death rate from this disease has shown an encouraging decline since 1926.

<sup>1</sup> Four units of public hospitals at Vancouver and Victoria are operated by the Provincial Board of Health and are included in Sanatoria.

<sup>2</sup> Includes other personnel.

### Subsection 2.—Statistics of Dominion Government Hospitals

**Dominion Government Hospitals.**—Hospitals operated by the Dominion Government are conducted for special purposes connected with departmental administration such as the care of war veterans and members of the Permanent Force, the quarantine and care of immigrants and lepers, the care of Indians as wards of the Government, etc.

Table 1 shows the number of Dominion hospitals compared with those in other categories for 1944. Tables 7 and 8 give statistics of the hospitals administered by the Department of Veterans Affairs as at June 1, 1946. In this edition of the Year Book statistics of the hospitals administered by this Department, only, are presented in detail, but a series of tables covering the other Departments will be presented later to link up with the series given in the 1939 Year Book, pp. 1041-43. During the intervening war years, many changes and transfers of jurisdiction have taken place.

**Hospitals Under the Department of Veterans Affairs.**—The number of patients treated in hospitals administered by the Department of Veterans Affairs has shown a steady increase during the year due to the reception of war casualties and, in large part, to veterans availing themselves of the treatment privileges extended on demobilization from the Forces. Considerable expansion of hospital facilities has been accomplished and will continue for some time. Tables 7 and 8 show the position as at June 1, 1946.

The Special Treatment Centres operated jointly by the Armed Services and the Department of Veterans Affairs have been discontinued as such. Facilities for the investigation and treatment of such special conditions as arthritis and tuberculosis and those involving orthopædic surgery, plastic surgery, neuro-surgery and neuro-psychiatry are available in the larger Department of Veterans Affairs hospitals.

**Subsection 3.—Statistics of Mental Hospitals**

At Dec. 31, 1944, there were 47,279 patients in mental institutions in Canada and 4,497 on parole or otherwise absent, making a total of 51,776, whereas the normal bed capacity was only 42,500, showing a seriously overcrowded situation if the patient population on Jan. 1, 1944, and the admissions and separations during the year are considered. This overcrowded condition was specially marked in British Columbia, Manitoba, Saskatchewan, Ontario and Quebec. Of the 47,279 resident patients in 1944, 35,869 were insane, 10,392 were mentally deficient, 729 were epileptic and 289 mental cases were otherwise classified.

The number of resident patients in mental institutions per 100,000 population on Dec. 31, 1944, was 394.8, as compared with 394.8 on the same date of 1943, 394.2 in 1942, 392.5 in 1941, 388.0 in 1940, 352.8 in 1935 and 305.4 on June 1, 1931.

Data are not available to indicate to what extent the increasing trend of patients per 100,000 population is due to more complete diagnosis and care than formerly, or to what extent there is an actual increase in the proportion of the population requiring treatment for mental diseases.

<sup>1</sup> Includes other personnel.

#### Subsection 4.—Corrective and Reformatory Institutions

On June 1, 1941, there were 28 corrective and reformatory institutions in Canada with a total inmate population of 4,051; of this number 3,118 were males and 933 were females. Of the total number of institutions, 14 were for males and 14 for females. Detailed statistics of crime and delinquency (which are presented on an annual basis) as distinct from these institutional statistics are given in Chapter XXX.

### Section 3.—The Victorian Order of Nurses for Canada

The Victorian Order of Nurses is a voluntary public-health agency, national in scope and having as its primary object the care of the sick in their own homes by visiting nurses. In 1945 there were 100 branches of the Order distributed as follows: Nova Scotia 16; New Brunswick 7; Quebec 5; Ontario 57; Manitoba 1; Saskatchewan 3; Alberta 2; and British Columbia 9. The affairs of each branch are directed by a local committee, which raises the money necessary to carry on the work. However, the policies and professional standards set by the national organization are accepted by the branches. The Board of Governors of the national organization is made up largely of representatives appointed by the branches.

Registered nurses are employed by the Order and have, in addition, post-graduate training in public-health nursing. All appointments are approved by Headquarters at Ottawa, which also assumes responsibility for the supervision of the nurses' work in the field, thus ensuring a uniform standard of service.

A complete maternity service is offered. This includes instruction before the baby arrives, attendance at the time of delivery and after-care of the mother and baby. If the baby is born in hospital, the Victorian Order Nurse may be called to demonstrate the baby's bath and to discuss problems of the baby's care that may arise.

During 1945 approximately 450 nurses in the field gave nursing care to 100,118 patients. Health teaching is an important function of the visiting nurse, and her entry into so many homes provides an unparalleled opportunity to make a worthwhile contribution toward the up-building of the health of the Canadian people.

The Order provides a community service available to everyone in the area served, regardless of race, creed or economic status. The nurses give care on a visit basis to medical, surgical and maternity patients under medical direction and thus care for a large group of people who would otherwise be neglected. The budget of the average man makes very little allowance for the cost of illness. The patient is expected to pay the cost of the visit, but the fee is adjusted to suit the family income and service is never refused because of inability to pay. Of the 756,984 visits made in 1945, 50 p.c. were free, 22 p.c. were paid, 18 p.c. were partly paid and 10 p.c. were paid for by insurance companies for care to patients. The cost of the service to those unable to pay is provided for by municipal grants and funds collected by means of campaigns.

In smaller centres where the Victorian Order Nurse is the only public-health nurse, the program of work is usually enlarged to include school-nursing service, child-hygiene centres, assistance at immunization clinics and other public-health services.

An increasing number of Victorian Order branches are giving part-time nursing service to industrial plants where the number of employees is not large enough to require the full-time services of a nurse.

### Section 4.—The Canadian Red Cross Society

The Canadian Red Cross Society in both its wartime and peacetime work is closely allied in a voluntary capacity with the Dominion and Provincial Governments. The Society was founded in 1896 and incorporated in 1909, its purpose being to furnish volunteer aid to the sick and wounded of armies in time of war and, in time of peace or war, to carry on and assist in work for the improvement of health, the prevention of disease and the mitigation of suffering throughout the world. Organization includes National and Overseas Offices, Provincial Divisions and 2,500 Branches. The Society has a senior and junior membership of over 2,500,000 in Canada.

The year 1945 saw the end of the War and the liberation of populations and prisoners of war in Europe and the Far East. This meant the re-directing of Red Cross work into new channels, not only in connection with its war work but also in the peacetime field. Surveys of the needs of liberated peoples in Europe and Asia were made and large shipments of relief supplies sent to these countries. Food, clothing and release kits were distributed to liberated prisoners of war and internees in both Europe and the Far East. In the sphere of peacetime endeavour, a wide and comprehensive program of peacetime work was drawn up and is now underway in all the provinces.

**Peacetime Services.**—The aims of the Red Cross Society in peace are the same as in war—to relieve suffering and need anywhere and everywhere in Canada to the full extent of its resources.

**Veterans Aid.**—Assistance to war veterans will always remain the first task of the Red Cross. Sick and disabled veterans in hospitals overseas and in Canada are receiving all possible care and kindness through the ministrations of Red Cross visitors, handicraft workers and library attendants. For the comfort and recreation of these men and their relatives, 8 Red Cross Lodges have been built or are under construction in connection with the large military hospitals in Canada. Assistance to needy veterans and dependents take many forms, such as medical, optical and dental assistance, clothing, food, etc.

**Outpost Hospital Service.**—At the end of 1945, a chain of 44 Red Cross outpost hospitals and nursing stations were in operation in the frontier districts of the Dominion, bringing medical science within reach of these isolated communities. A number of new Outposts are planned and should be in operation during 1946. Living under pioneer conditions, the outpost nurses save many lives for Canada and, in their service in rural schools and settlers' homes, bring health and security to these people.

**Blood Transfusion Service.**—Many Canadian hospitals are without adequate stocks of blood serum or blood transfusion facilities. It is proposed to establish a National Blood Transfusion Service which will fill all such needs throughout the country free of charge. This service will open in 1946.

**Junior Red Cross.**—This organization, devoted to the principles of health, good citizenship and international friendliness, has helped over 25,000 crippled children since its inception. At the end of 1945, it had a membership of 876,277 pupils in 30,861 branches in Canada and Newfoundland. These Juniors have given magnificent war service in providing relief for child war victims throughout the world, supplying ambulances and other mobile equipment, as well as maintaining a number of war nurseries in Great Britain.

*Health and Other Activities.*—Improvement of the health of the Canadian people is one of the primary aims of the Society. Instruction in nutrition, home nursing, first aid, swimming and water safety are among the services already under way for which considerable expansion is planned in the post-war period.

*Wartime Services.*—A number of the wartime services were still in operation at the end of 1945. These included Workroom and Relief Departments, Hospital Services, operation of four Maple Leaf Clubs, warehousing and shipping of large quantities of relief goods to Europe and Asia, assistance to returning service personnel and dependents, and the service of Canadian Red Cross Corps in Great Britain and Europe.

*Canadian Red Cross Corps.*—At the end of 1945, the Corps had 4,918 members in Canada and the Overseas Detachment 292 members serving in Great Britain and Europe as welfare workers, ambulance drivers, office and canteen workers, handicraft workers in military hospitals, V.A.D.'s in civilian hospitals in England, and Escort Officers on ships carrying service men's dependents to Canada. In Canada they served in all departments of Red Cross work.

*Assistance to Service Personnel and Dependents Returning to Canada.*—Organized work in this connection was exceptionally heavy during the year, the Government having entrusted to the Red Cross the task of meeting returning men and their dependents at port of entry and conducting them on trains to their destinations. This service included Red Cross conducting officers on all trains, distribution of supplies, despatch of telegrams to relatives, organization of reception centres and mobile canteens, and many other services.

*Prisoner of War Food Parcels.*—By the end of July, 1945, all six Red Cross food-packing plants were closed after this service had been in operation for four and one-half years, having packed during that period over 16,000,000 food parcels for prisoners of war.

*Blood Donor Service.*—Aug. 31, 1945, marked the conclusion of this service for the preparation and drying of human blood serum for use in the treatment of war casualties. The number of blood donations reported from 662 regular and sub-clinics throughout Canada since the inception of the service on Jan. 29, 1940, was 2,338,533.

*Jam and Honey.*—In co-operation with Women's Institutes and other organizations, the Red Cross shipped overseas 2,250,000 lb. of jam and honey for distribution to war nurseries, hospitals, etc.

*Comforts, Supplies and Relief Clothing.*—Since the beginning of the War, Red Cross women war workers in Canada made more than 45,000,000 articles for the Armed Forces and civilian war sufferers overseas.

### Section 5.—The Order of St. John\*

The origin of the Order of St. John goes back to the Crusades and the Knights of St. John and Malta. His Majesty the King is supreme head of the Order which has headquarters at London, England, and units in all parts of the British Empire. In Canada, the Governor General is the Knight Commander and meetings of the Order are held at Government House. At the head of the Canadian Branch is the Commandery of the Grand Priory of the British Realm of the Venerable Order of the Hospital of St. John of Jerusalem, usually referred to as the Order of St. John.

\* Including the St. John Ambulance Association and the St. John Ambulance Brigade.

The Canadian Branch has its headquarters and national offices at St. John House, Ottawa, Ont., with branches in every province and local centres in hundreds of cities and towns throughout Canada. There are two distinct branches: the Association whose members train instructors, conduct classes and issue various certificates; and the Brigade, members of which are in uniform under a form of military discipline, receive constant supplementary training, and are available for call whenever the need arises. The Brigade strength is approximately 15,000 persons, about equally divided between the Ambulance Division (men) and the Nursing Division (women), and organized into about 300 divisions from coast to coast.

The primary purpose of the Association is to teach first aid and home nursing and other kindred subjects to citizens of Canada, irrespective of age, and to provide trained and organized personnel to help in time of disaster or national emergency. The work was started in 1895 and since then more than 1,000,000 persons have received certificates and other awards. Many thousands of these went to members of the Armed Forces to which trained instructors and textbooks have been provided in large numbers. The railways of Canada and many large industrial concerns maintain their own St. John centres. The training of personnel of Air Raid Precaution in First Aid was a large wartime undertaking.

The scheme of Voluntary Air Detachment Training inaugurated in 1943 provided trained personnel for overseas and, in addition, a number of members have been trained for service in Royal Canadian Army Medical Corps hospitals in Canada as well as for civilian hospitals. Hundreds of members of the Nursing Division responded to the call for nursing aides overseas and gave outstanding service in Great Britain, Italy, France, Belgium, Holland and Germany. Indeed, some rendered notable service in India and Burma. They worked as nurse aides, transport drivers and Headquarters staff. St. John drivers were appointed to Army Commands and special ambulance convoys in Britain while some were sent to work in Europe. They worked all hours of the day and night conveying wounded from airfields and ports to hospitals. St. John nursing members helped to offset the very serious shortage of nurses overseas; they were appointed to Emergency Medical Service Hospitals set up by the Ministry of Health in Great Britain to carry out additional hospital services arising out of the War. Others were employed in St. John Convalescent Hospitals and Red Cross Hospitals.

The return of peace saw the Order of St. John revert to its wide field of service. The Brigade performs a very special function. At port cities it assists the regular R.C.A.M.C. doctors and nurses, helps in hospitals and merchant seamen's hostels and also assists shipwrecked seamen. Uniformed St. John Brigade members are to be found at all exhibitions, large demonstrations or wherever crowds gather. Indeed, St. John First Aiders have proved their worth on the ski-runs in the Laurentians, on Mount Royal, on the Gatineau Hills, at Fort William and other places where skiing is one of the major Canadian sports.

The Order of St. John is carrying on an extensive peacetime program of home nursing, first aid and blood grouping. The training of Brigade members as blood-typing technicians was commenced in 1943. The entire personnel of large industrial firms are being typed so that, in the event of serious accident, blood transfusions may be given in the quickest possible time.

CHAPTER XXII.—POST-WAR RECONSTRUCTION\*

CONSPECTUS

	PAGE		PAGE
SECTION 1. THE DOMINION GOVERNMENT PROGRAM OF RECONSTRUCTION.....	831	Subsection 2. Liaison Maintained between Reconstruction and Supply and Other Federal Departments.....	838
SECTION 2. THE DOMINION DEPARTMENT OF RECONSTRUCTION AND SUPPLY...	835	Subsection 3. War Assets Corporation...	840
Subsection 1. The Purely Departmental Administration.....	836	SECTION 3. PROVINCIAL PROGRAMS OF RECONSTRUCTION.....	842

The first phase in the framing of Canada's post-war economic policy began long before the cessation of hostilities, and consisted of intensive study of reconstruction problems by a variety of public bodies. The preliminary organization of this work is outlined at pp. 737-743 of the 1943-44 Year Book. Committees of the Senate and House of Commons, the Advisory Committee on Demobilization and Re-establishment, the Advisory Committee on Economic Policy and the Advisory Committee on Reconstruction all shared in this preliminary task of studying post-war problems and making recommendations for economic policy. The reports of the last-named committee and its sub-committees were tabled in the House on Jan. 28, 1944. The main report is summarized on pp. 745-747 of the 1943-44 Year Book.

Out of all this preliminary study developed the Government's White Paper on Employment and Income (see pp. 843-847 of the 1945 Year Book). The White Paper set forth the aim of the Government's reconstruction policy as follows:—

“The central task of reconstruction in the interest of the Armed Services and civilians alike, must be to accomplish a smooth, orderly transition from the economic conditions of war to those of peace, and to maintain a high and stable level of employment and income.”

That part of the broad policy which required for its implementation co-operation between the Dominion and Provincial Governments, was translated into more specific and concrete terms in the “Proposals of the Government of Canada” presented before the Dominion-Provincial Conference on Reconstruction in August, 1945. The Dominion proposals, summarized below, set out in some detail the Government's legislative and administrative program aiming at the maintenance of a high level of employment and income during the post-war transitional period and the years to follow and offered a basis of agreement with the Provincial Governments on the distribution of tax-collecting powers and administrative responsibilities necessary to implement such a program, initially for a three-year period.

Meanwhile the Dominion had created new administrative machinery to implement its reconstruction program. In June, 1944, the Department of Reconstruction was created, and in October, 1944, a Cabinet Committee on Reconstruction was set up. In January, 1946, the former Department of Munitions and Supply was merged into the new Department of Reconstruction and Supply.

Section 1.—The Dominion Program of Reconstruction

The constitutional aspects of the Dominion-Provincial Conference on Reconstruction are dealt with on pp. 79-81 of this volume. The economic program for the transitional period contemplated by the Dominion Government which is set out in detail in the “Proposals of the Government of Canada” can be summarized as follows:—

**Summary of the Dominion Proposals on Reconstruction.**—In order to realize a high and stable level of employment and income, steps should be taken

- (1) to create the conditions under which private enterprise can provide the maximum income and employment;
- (2) to promote bold action by the State in those fields in which the public interest calls for national development;
- (3) to try to provide, through public investment and other means, productive employment for our human and physical resources when international and other conditions adversely affect employment; and
- (4) to provide, on the basis of small regular payments against large and uncertain individual risks, for such hazards and disabilities as unemployment, sickness and old age.

Because Canada is a federal state, these responsibilities are shared by the Dominion and Provincial Governments. The main purpose of the Conference was to devise a working co-operative arrangement to this common end in harmony with the existing federal system.

The Dominion Government indicated that it would undertake the following measures to meet transitional economic problems and create the climate necessary for continued expansion of the economy.

**Decontrol.**—Wartime controls over prices, wages, rent, manpower, trade and commodities would be removed in accordance with a policy of gradual decontrol as speedily as conditions permit.

**Rehabilitation.**—Aid to the re-establishment of ex-service men in the nature of cash grants on discharge, protection of the right to pre-enlistment jobs, training and financial assistance for re-employment, and a measure of social security would be provided.

**Housing.**—The present emergency housing legislation would gradually be translated into a well-integrated, continuing housing program with encouragement to community planning, aid in financing home construction both for rent and ownership, greater uniformity in building by-laws, slum clearance, and assistance to low-rental housing projects. Steps would also be taken to increase the supply of skilled construction labour and building materials.

**Reconversion.**—Administrative machinery in the Department of Reconstruction and Supply would formulate plans for economic development and industrial expansion, assist industry in the reconversion of its productive facilities and direct the termination of war contracts and the disposal of surplus war assets.

**Agriculture and Fisheries.**—Measures designed to aid in the stabilization of this important industry would include steps to prevent violent fluctuations in farm prices, to give the agricultural population a measure of social security and to expand the experimental, marketing and conservation programs.

**Labour.**—Wage control would be gradually relaxed as inflationary pressures ease, and provincial powers of labour legislation would be restored as soon as possible.

**Public Investment.**—In co-operation with the provinces and municipalities, a well-planned program of useful public development works would be drawn up. It was intended that public projects should cover the various avenues of public investment: conservation and development of natural resources, transportation improvements, communal and recreational facilities, research, exploration, etc. Financial support for these projects would be integrated to fit into an over-all program of full employment. Public investment should be timed in such a way as to counter, rather than aggravate the effects of cyclical fluctuations of business conditions.

*Social Security.*—In co-operation with the provinces, the social security legislation already in existence was to be broadened by the introduction of comprehensive health insurance provisions and extensions of the old age pension and unemployment insurance schemes. Such a measure would go far to further protect the level of income and employment of the Canadian people from wide fluctuations.

The Proposals conclude with a suggested basis of agreement between the Dominion and the Provinces on the financial arrangements necessary to carry out the reconstruction program.

The Dominion Proposals were accepted as a basis of discussion by the Dominion-Provincial Conference which met in August, 1945. A co-ordinating committee consisting of the Prime Minister and the nine Provincial Premiers met in camera in November, 1945, January and April, 1946. Modifications were suggested by the provinces and revisions were offered by the Dominion, but on May 3, 1946, the Conference was adjourned *sine die* when it became evident that no immediate agreement acceptable both to the Dominion and to all the provinces was likely to be reached.

Accordingly, in the Budget Speech of June 27, 1946, the Dominion Government proposed a modified form of agreement to be concluded with any province willing to restrict its use of certain specified tax fields over a five-year period in return for an annual subsidy. Failure to secure a general agreement with the provinces put into abeyance for the time being implementation of the Dominion's proposed plans for a comprehensive social security scheme and a co-ordinated public investment program (see also p. 81 of this volume).

**Implementation of Reconstruction Policy.**—By mid-1946, a major part of the reconversion program has been accomplished. Large numbers of men and women either in the Armed Forces or working in war industry had moved to production and distribution of peacetime goods with a minimum of dislocation and personal hardship. Between June 1, 1945, and June 1, 1946, approximately 620,000 service men were discharged, and possibly an equal number were released from employment on war contracts. In spite of the magnitude of this manpower shift, the number of unemployed was kept surprisingly low, never reaching more than about 270,000 out of a total working force of close to 4,800,000. Similarly, technical reconversion was accomplished with remarkable speed. A survey of major war-contract plants revealed that the physical reconversion of industry to peacetime production was expected to be about two-thirds complete by mid-1946, and four-fifths by the end of 1946. The survey also showed that extensive plans for modernization and expansion of productive facilities were well under way. The high level of employment and income prevailing during the war years declined only moderately, and levelled out far above pre-war levels. Production of consumer goods in short supply increased steadily in spite of supply bottlenecks and industrial unrest. A substantial volume of home building and commercial construction was in prospect as the supply of labour and materials expanded.

*Decontrol.*—The policy of gradual decontrol was implemented during the first post-war year to a considerable extent, although the pressures of inflation continued in many fields. Price ceilings were removed in cases where goods were in reasonable supply, and adjusted where such action was necessary to increase production. An integral part of this policy was the payment of subsidies in order to stabilize prices of the chief items in the consumer's budget. Almost all manpower controls were suspended, and controls of foreign exchange, wages, and foreign trade were eased where possible. The success of the price stabilization policy is reflected in the

fact that the cost-of-living index rose only 2.1 p.c. between April, 1945, and April, 1946. On July 5, 1946, the Minister of Finance announced in the House of Commons a series of further steps taken, "in order to prevent undue increases in cost of living and cost of production, improve the effectiveness of price control, encourage a greater supply of scarce goods which we import from other countries, and generally strengthen the stabilization program and facilitate an orderly post-war adjustment of the Canadian economy while protecting it from the major effects of adverse developments outside our borders". These steps included the issuance of a list of all items still under price control, a change in the control of import prices to make possible the entry of high-priced foreign goods into Canada, the upward revaluation of the Canadian dollar in terms of the American dollar and the pound sterling, and the continuance of subsidy payments.

*Rehabilitation.*—The implementation of the Government program of rehabilitation for ex-service men is outlined in Chapter XXVIII of this volume. By mid-1946, the majority of ex-service men had been absorbed into civilian employment or were undergoing educational or vocational training with financial assistance from the Government.

*Housing.*—In addition to the assistance provided for the construction of dwellings under the National Housing Act (see pp. 455-458), the Government has taken steps to relieve the present housing emergency by stimulating the production of building materials, granting priority in obtaining supplies to the various veterans' housing projects and encouraging the use of new methods and materials. To encourage training in construction trades, the Dominion Government entered into a ten-year agreement with the provinces in 1944. According to this agreement, the Dominion Government provided a fund of upwards of \$1,000,000 to assist the provinces in the expansion of training facilities. Special provisions were also made for veterans. By Mar. 31, 1946, 6,785 apprentices were reported by the Department of Labour to be in training, about three-quarters of them being veterans. The effect of all these measures made itself felt in the volume of residential construction undertaken. During the calendar year 1945, a total of 47,000 new homes were built in Canada. A target of 60,000 new homes was set for the fiscal year 1946-47.

*Reconversion and Assistance to Private Investment.*—The settlement of outstanding war contracts proceeded rapidly after V-J Day. Surplus war plant and equipment was made available for the reconversion and expansion of industry by the War Assets Corporation, working under the Department of Reconstruction and Supply. Reductions in excess profits and income taxes stimulated the incentive of private industry to expand production, and special depreciation allowances for tax purposes were granted to firms carrying out deferred investment programs. As of July 1, 1946, approvals for special depreciation had reached a total of \$364,000,000 of which \$122,000,000 involved outlay for new construction and the purchase of existing buildings, with the remaining \$242,000,000 spent on the purchase of machinery and equipment. Low interest rates and special credit facilities for industrial expansion not provided by the commercial banks were made available through the establishment of the Government-sponsored Industrial Development Bank.

*Export Trade.*—The Government has supported the creation of the International Monetary Fund and World Development Bank, and has participated in preliminary discussion of methods for the removal of obstacles to a high level of world trade. The services of the Department of Trade and Commerce have been

greatly expanded, and extensive foreign credits have been made available to impoverished countries under the Export Credits Act and the United Kingdom loan agreement.

*Agriculture.*—The granting of foreign credits to Britain and other countries on the continent of Europe enabled large shipments of foodstuffs to be made to nations which temporarily lacked the means of payment. Thus agricultural employment and income was sustained in Canada. Negotiations were carried on with the United Kingdom, Canada's best customer of agricultural products, to conclude agreements as to the quantities and prices of farm commodities to be sold during the next five years.

*Labour.*—The continuance of price control after the War protected the earnings of labour from an inflationary loss of purchasing power. The extent of labour disputes in Canada up to mid-1946 was relatively small, and there was some relaxation of the wage ceilings in force at the end of the War.

*Public Investment.*—In view of the heavy volume of investment planned by private industry, the emphasis of the Dominion's public investment program has been put on long-range planning of public development works for implementation when employment conditions warrant. A "shelf" of suitable projects in various states of planning is being built up by the Dominion Government. Agreement for a long-range public investment policy has been sought in conferences with the Provincial Governments but this has so far not been achieved.

*Social Security.*—The implementation of the Government's program of national health insurance and extension of old age pensions and unemployment insurance awaits the conclusion of agreements with all the provinces over the division of taxation sources and administrative responsibility. The payment of family allowances, however, was inaugurated in the summer of 1945, adding to the security of children in low-income families.

## Section 2.—The Department of Reconstruction and Supply

The Department of Reconstruction and Supply Act, 1945 (9-10 Geo. VI, c. 16), states that the Minister shall exercise such powers as applied to him as Minister of the Department of Munitions and Supply and as Minister of Reconstruction. The Act came into force by proclamation on Dec. 24, 1945, but the implementation of certain sections was reserved until Jan. 1, 1946. The work of the Department is to formulate plans and correlate information for industrial development and conversion; public works and improvements; housing and community planning; research and the conservation and development of natural resources. In order to carry out these functions, the Department has built up, under the Deputy Minister, a regular establishment of administrative offices. At this stage (July, 1946), the Department is continuing the various controls instituted during the war years under the Department of Munitions and Supply in so far as they are still in effect in the post-war economy.

In addition to this regular departmental organization, the new Department, in order to carry out its over-all functions, co-ordinates its policies with those of other Government Departments and agencies. In this connection, the Minister may call conferences of experts, or of representatives of labour or the professions, or of primary producers and leaders in industry, as well as Dominion, provincial or municipal authorities for the purpose of working out any national reconstruction plan.

Liaison with the reconstruction problems of the various provinces, has been effected by the establishment of a number of Regional Reconstruction Councils. There is one Regional Council in each province with the exception of Ontario and Quebec, where two Councils for each are established. Membership of the individual Councils comprise representation from labour, and from manufacturing and other basic industries which play an important part in the economy of the province, such as agriculture or fishing. This number of members on each Council and the nature of its membership depend on the diversity of the economy in the province in which the Council functions. At the head office of the Department at Ottawa, there is established the office of the Co-ordinator of Regional Reconstruction Council, whose duty it is to keep in touch with the various Councils, to see that they are supplied with the latest information concerning reconstruction problems in their several districts, and to learn of their particular problems whose solution might be expedited by reference to the various branches of the Department at Ottawa.

### **Subsection 1.—The Purely Departmental Administration**

At present this function is concerned mainly with continuing the earlier programs of the Department of Munitions and Supply and of the former Department of Reconstruction but there is no doubt that, as the post-war situation develops and Dominion-Provincial relations in the post-war era become more clearly determined, the departmental organization will develop along new lines to conform with such changes.

Under the following headings the administrations now set up to deal with the various matters are described.

**Controls.**—Although most of the controls instituted during the war years have been terminated, it has been considered advisable to retain a number during the immediate post-war period until such time as consumer goods are in sufficient supply.

Early in 1946, most of the Coal Control orders were rescinded, but Coal Control as such, was maintained in the event that the coal situation may require further Government direction. The Priorities Officer assumed the duties of Motor Vehicle Controller. Although all of Power Control orders have been lifted concerning electrical power, Power Control is still maintained to concern itself with the control of natural and manufactured gas in southwestern Ontario. Control of rubber, steel and timber, three vital products for the reconversion of the nation, is maintained in full. A more recent Control, that of Radio-Active Substances, was set up in November, 1945. This Control operates the provisions of Orders in Council passed in 1943, reserving to the Crown all radio-active materials in the ground as and after that date, and which applied to Yukon and to the Northwest Territories. Shortly afterwards, the Provinces of Manitoba, Saskatchewan and British Columbia took similar action for the control of these materials. All dealings in radium and uranium in Canada are placed under this Control.

**Crown Companies.**—Such Crown Companies as now remain, and which were administered by the Department of Munitions and Supply during the war years, now come under this Department and include, Allied War Supplies Corporation; Eldorado Mining and Refining (1944) Limited; Federal Aircraft Limited; Park Steamship Company Limited; Polymer Corporation Limited; War Assets Corporation (see pp. 840-842); War Supplies Limited; Wartime Housing Limited; Wartime Shipbuilding Limited; and Canadian Arsenals Limited.

Canadian Arsenals Limited is an established service, comparable to a fourth arm of the Armed Forces. It has been set up to make possible the speedy mobilization of the industrial capacity of the nation. This Company, working under the direction of the Department of Reconstruction and Supply, dovetails its defence preparations with those of the Royal Canadian Navy, the Canadian Army, and the Royal Canadian Air Force. The three Armed Services, and the Crown Company are jointly responsible for making sure that Canada will be in a position to rally quickly should the need arise. The specific task of Canadian Arsenals Limited is not only to keep Canada's Armed Forces equipped with the most modern arms that can be obtained, but also to keep Government and private factories, and key civilian personnel in a state of readiness. Defence manufacture in Canada is roughly divided into two categories. In the first category are civilian plants producing automobiles, refrigerators, ships, aircraft, railway equipment, clothing and other civilian items. Such plants can be rapidly converted to the manufacture of war supplies and, by constant liaison, Canadian Arsenals Limited will make possible a much more rapid conversion than was possible in the early days of the War of 1939-45. In the second category are the plants built to produce defence items of no value to the civilian, such as explosives, shell filling, guns, small arms, etc. It is the intention of Canadian Arsenals Limited to maintain plants in this second category. Civilian plants, convertible in the event of an emergency, will be kept apprised of the latest designs and developments in military weapons.

With the possible exceptions of Canadian Arsenals Limited; Polymer Corporation Limited; Wartime Housing Limited; Park Steamship Company Limited; and Eldorado Mining and Refining (1944) Limited; the remaining Crown Companies operating under the direction of the Department of Reconstruction and Supply are gradually winding up their wartime affairs.

**Contract Settlement Board.**—Settlement of war contracts and the renegotiation of those that were hurriedly made in the war years is proceeding steadily. The Contract Settlement Board of the Department of Reconstruction and Supply is being assisted by a large staff of accountants and auditors in carrying out this work. It has been the established policy of the Government since the start of the War that profits on war contracts would be fair and reasonable and provision was made by Order in Council and subsequently by the Department of Munitions and Supply and Department of Reconstruction and Supply Acts that where profits on war business were found to be in excess of what is considered fair and reasonable, a contractor's war business could be renegotiated on an over-all basis. Such renegotiation is well advanced and to date has resulted in refunds of more than \$400,000,000. Renegotiation settlements have, in every case, been arrived at by agreement between the Government and the contractor without reference to judicial procedure.

**Priorities Branch.**—In addition to its activities in the United Kingdom and the United States Division, the Priorities Branch is concerned largely with the housing situation in Canada, especially housing for ex-service personnel. The sole limitation on the number of houses that will be built during 1946-47 will be the availability of building materials and supplies. Important steps have been taken to provide specific priorities assistance for the Canadian Veterans' Housing Program. This formal assistance is designed to channel the required quantities of building materials into Government-approved low-cost housing and requires suppliers of specified building products, with certain exceptions, to make prior shipment of orders for materials going into approved projects. The Priorities Branch is also concerned with the important task of increasing production of building materials.

The Department of Reconstruction and Supply maintains central offices at Montreal, Toronto, Washington and in the United Kingdom, and representatives are to be found in practically every principal city and town in each province of the Dominion and in Newfoundland. In many cases these are in continuation of those established under the former Department of Munitions and Supply; the Purchasing Branch of the Department is also a continuation of the Supply Branches established during the War.

#### **Subsection 2.—Liaison Maintained Between the Department of Reconstruction and Supply and Other Dominion Departments**

Because of the close relationship which the Department of Reconstruction must have with other Departments of the Government, Directors-General and Co-ordinators have been appointed from the Departments of Labour, Transport, Mines and Resources, Trade and Commerce and other Departments, and the National Research Council has also been placed under the Minister of Reconstruction and Supply (formerly under the Minister of Trade and Commerce). It is the responsibility of these Co-ordinators to effect a smooth liaison with such departmental units as: the Office of the Labour Adviser; the Air Development Branch; the Economic Research Branch; Public Projects Branch; Co-ordinator of Regional Reconstruction Council; Resources Development Branch; Research and Development Branch; and the Committee on Special Depreciation. A synopsis of the work being done by these units is as follows:—

**Labour.**—It is the function of the Labour Adviser to advise the Department of Reconstruction and Supply on reconstruction problems and policy as they affect labour, and to keep in contact with labour organizations. He also acts as liaison between the Reconstruction and Supply Department and the Department of Labour.

**Air Development.**—The Air Development Branch has already completed a Canada-wide survey to determine inter-community travel between the more important centres. A historical statistical report on commercial air services in Canada, with a view to determining future trends of air traffic in various sections, is also under preparation in co-operation with the Department of Transport.

**Economic Research.**—The Economic Research Branch was formed for the purpose of advising in matters of economic policy and of developing information required for the analysis of problems on economic conditions in Canada. It is collecting and preparing data and reports in this field. The work of the Branch consists of: a series of monthly reports reflecting present conditions and future trends in forty-two designated areas; a series of industrial studies to give some indication of the nature of reconversion problems of the main Canadian industries; a collection of charts and memoranda showing current economic trends; forecasts of employment and national income level; preparation of a short monthly report on the current economic position of the nation indicating the significant trends; preparation of an inventory of Dominion, provincial and municipal public projects in terms of type, location, estimated cost and state of planning; a forecast of building material requirements for housing targets of varying dimensions and monthly reports on the supply of building materials; and numerous other economic studies. A report on the location and effect of wartime industrial expansion in Canada, 1939-44, has been completed and published and a study on "Public Investment and Capital Formation" was prepared for the Dominion-Provincial Conference on Reconstruction, 1946.

**Public Projects.**—This Branch has been working in close harmony with the Departments of Agriculture, Fisheries, Health and Welfare, Justice, Mines and Resources, National Defence (Navy), National Defence (Army), National Defence (Air), Public Works, Transport (including Air Services), the Royal Canadian Mounted Police, and the National Harbours Board. In the conferences held, each construction project provided for by the various Departmental programs for the year 1946-47 was screened as to urgency and as to whether such project, if put into execution, would require appreciable quantities of materials or labour that should be devoted to the implementation of the housing program. Information as to the volume of potential reserve projects is being assembled.

**The Resources Development Branch.**—This Branch works closely with the Public Projects Branch in screening Departmental projects that have a relation to the development of natural resources.

An important activity being undertaken by the Department of Reconstruction and Supply, is the operation of the Forest Insect Control Board, which works under the Resources Development Branch. This Board was set up to fight the spruce budworm plague which has already devastated some 22,000 square miles of forest and is known to be present in approximately one-third of the accessible productive forest area of Canada. The Board is comprised of representatives from the provinces most seriously affected by the insect epidemic and is preparing a comprehensive program and endeavouring to have as much as possible of the actual work done by permanent Government Departments, both Dominion and provincial (see p. 263, Chapter IX). The present epidemic, unless controlled, may result in the loss of many years' supply of raw material for paper products, representing an export value of billions of dollars. As part of this fight, research scientists are engaged and laboratory facilities have been made available.

**Research and Development.**—One of the main functions of the Research and Development Branch is the dissemination of technical information to Canadian industry and manufacturing. A number of regional representatives are maintained throughout the country who are in personal contact with the industrial life of their several districts. Many established industries are being given assistance of a technical nature to improve the quality of their product, and to increase their rate of productivity. Close liaison by the Technical Information Service is maintained with the numerous Government and university research laboratories, and in many cases with private research laboratories. The technical officers on the Ottawa staff, other than those on loan to the Technical Information Service, are primarily concerned with the technical aspects of building research.

**The Depreciation Committee.**—Financial assistance is also made available indirectly to manufacturing concerns through the operation of the Special Depreciation Committee of the Department. Under an Order in Council (P.C. 8640, Nov. 10, 1944), the Minister of National Revenue may allow depreciation at not more than double the rates normally allowed in respect of plant or equipment built or acquired if the taxpayer is, in the opinion of the Minister, making a new investment by building or acquiring the plant or equipment. This is applicable to industries planning post-war expansion, conversion, or modernization, to enable them to change over as soon as possible from a wartime to a peacetime economy. The Committee receives from industry and manufacturers applications on prescribed forms, passes upon their merits and, if approved, the advocacy is then forwarded

to the Department of National Revenue for action in connection with taxation. At the end of March, 1946, a total of 1,994 applications had been acted upon by the Committee, representing an amount of \$274,956,747.

### Subsection 3.—War Assets Corporation

War Assets Corporation has made definite progress in the execution of the program undertaken for the sale and disposal of war surplus material, industrial war plants, machinery and equipment, and lands and structures which had been acquired by the Armed Services, Government Departments and industrial establishments to promote Canada's war effort. This surplus disposal program came into effect in April, 1944, when War Assets Corporation Limited began to function following its incorporation under the Dominion Companies' Act by authority of Order in Council P.C. 9108 of Nov. 29, 1943, and continued to so function until July 12, 1944, when the business, assets and liabilities were taken over by War Assets Corporation then established by authority of the Surplus Crown Assets Act (8 Geo. VI, c. 21), assented to June 30, 1944.

War Assets Corporation Limited, the original establishment, reported 179 sales from April to July, 1944, for a net amount of \$390,996. The Corporation, as it now exists, in its first report enumerated 12,763 sales from July, 1944, to Mar. 31, 1945, amounting to \$9,116,132, making total receipts to that date of \$9,507,128. The second annual report, 1945-46, recorded 54,496 sales to the value of \$124,878,369. Accordingly, the grand total of sales transactions from the beginning of the disposal program to the end of March, 1946, was 67,438 and the value thereof \$134,385,495.

Sales completed during the year ended Mar. 31, 1946, were recorded in 51 categories, some of which covered a wide range. For example, consumer goods is a principal category which includes thousands of items purchased over the counter by the domestic consumer to satisfy his needs in clothing, sustenance, shelter and amenities; aircraft has six sales sections dealing with units numbered in tens of thousands. The largest number of invoices recorded under one category was for hardware—5,416 invoices representing sales of \$677,734. Second in the list was ferrous metals with 4,784 invoices totalling \$5,112,077, followed by scrap metal—3,899 transactions totalling \$3,245,770; trucks, trailers and tractor sales numbering 3,640 brought \$21,453,788; 3,482 sales of non-ferrous metals realized \$2,569,762, and 3,313 sales of machine tools and equipment, \$18,835,041. By comparison the much smaller number of sales (446) in the ships division brought a return of \$31,970,437.

The category of ship sales covered a diversity of vessels from power craft to yachts converted for naval patrol duty, war craft including frigates, corvettes, Fairmiles, over-age destroyers, obsolete submarines, cruise ships converted into auxiliary cruisers, tugs, landing craft, a variety of barges, damaged ships, uncompleted hulls, and a large number of freighters and tankers built in Canadian shipyards for war trade. Surplus freighter tonnage in the latter classification was sold by the Park Steamship Company Limited, a Crown Company, acting as agent for War Assets Corporation.

Some of the war vessels declared surplus by the Royal Canadian Navy were sold to friendly powers for use by the coast guard or for training practice, others were sold for conversion to commercial purposes. A number of the transactions included an agreement that such conversion must be undertaken in a Canadian shipyard to provide work for Canadian workers. No market was found for the smaller and older corvettes except for scrapping and the steel situation was such during the year that their break-up for the smelter was considered advisable.

The economics of conversion and adaptation has affected a wide range of material placed with War Assets for disposal. Many of the machines and much of the equipment designed for war possess little, if any, peacetime use. This problem arose frequently when dealing with surplus aircraft. A proportion was sold for service outside Canada, and a limited number of types capable of conversion were sold to Canadian purchasers, while numbers of light aircraft were sold to flying clubs. However, most of the surplus aircraft was not licenseable in this country, therefore after all useful instruments and components had been removed, the carcasses and frames were offered at modest prices, but the cost to the purchaser of removal was frequently more than the cost to him of the frame. A large number of surplus wheels from aircraft and surplus aircraft metal found sale in centres where the material was used to make trailers and non-tractive factory trucks.

The merchandising policy of the Corporation provides for three classes of priorities: (1) Dominion Government Departments; (2) provincial government departments; and (3) municipalities, educational institutions and certain non-profit welfare organizations. When priority claims are satisfied the remaining surplus is sold through the branch offices of the Corporation to the normal avenues of distribution which supply the retail outlets. Generally, the wide range of consumer goods, a most comprehensive list, is dealt with in this manner, but the policy also provides for direct sales in such specific divisions as real estate, buildings, land without buildings, industrial plants, machine tools, machinery, aircraft, ships and in such matters where transactions are usually undertaken by principals in personal negotiations, or through recognized brokers.

When goods of a specific trade mark become surplus and reach the Corporation, they are first offered to the original manufacturer. Used passenger cars and commercial vehicles declared surplus by the Armed Services were sold to agents of the manufacturers. This policy was expanded when surplus used army trucks became available and a considerable proportion of these were sold by agricultural federations to farmers who guaranteed that these vehicles would be used on their own lands.

A large number of military transport vehicles, dump trucks and chassis with ambulance bodies were disposed of by the Corporation through the Canadian Export Board for the use of the United Nations Relief and Rehabilitation Administration and shipped to Europe and Asia.

To assist relief work in many lands under the welfare administration of UNRRA and recognized national relief organizations, a large volume of used naval, army and air force uniforms and used footwear no longer required by these Services, was dyed, repaired or remodelled for civilian requirements at War Assets Corporation Reclamation Depot, Valleyfield, Que. It was then sorted and sized and, when packed, was sold to relief organizations through the Canadian Export Board. The total of these sales has been considerable, but the unit cost of clothing and footwear has been at a moderate level, enabling relief organizations to obtain much needed clothing more cheaply than would be possible through the usual channels.

A considerable volume of machinery, equipment and tools of many types, buildings, furniture, and scientific and laboratory equipment has been acquired by the Department of Labour for use in the vocational training of war veterans. Similar equipment in lesser volume has been sold to educational institutions for the same purpose, and other useful material, aircraft and aircraft engines, has been placed in care of schools and colleges on indefinite loan for instructional purposes.

The transactions completed by the Corporation, include the sale of a considerable number of industrial plants some of which were built especially for war production and were operated by Crown Companies, while others were extensions to established companies undertaking war contracts. Some of the custodian companies have purchased these additional buildings as well as the machinery, tools and other equipment, the general level of recovery being equal to approximately 35 p.c. of the original cost. As property, tools and equipment had been in use up to six years, the return was regarded as satisfactory, particularly as such purchases were to assist in the changeover of wartime establishments, thus to increase civilian production and maintain employment.

An important phase of the conversion period has been the development of multiple tenancy occupancy, a system by which some large establishments unsuitable for a single firm, were divided to provide manufacturing space for a number of smaller industries, and by means of this grouping to make economical provision for power, heat and other essential services at reasonable inclusive rental. In every instance the new tenant industry has increased production and employment.

The Corporation has developed with the expansion of its business, becoming a well-balanced organization prepared to deal with war surpluses in any quantity wherever offered. Standard procedures and policies have been established for the general administration. To administer the Department of Supply, which governs the reception, warehousing and distribution of surplus material, and that of merchandising, which is concerned with sale and disposal of such material, the country has been divided into five territories. These territories are: the Maritimes, with branch sales offices at Halifax, N.S., and Moncton, N.B.; Quebec, with branch offices at Quebec City and Montreal; Ontario, with branches at Ottawa, Toronto and London; the Prairies (portion of Western Ontario, and Manitoba and Saskatchewan) with branches at Winnipeg and Regina; and western Alberta and British Columbia with branch offices at Calgary and Vancouver. The Corporation also has a territorial office at St. John's, Newfoundland.

The Corporation staff at the end of March, 1946, numbered about 5,400 individuals, and of the male force almost half were war veterans.

### **Section 3.—Provincial Programs of Reconstruction**

The provinces have planned, individually, reconstruction measures for the post-war period. Schemes have been formulated for stimulating post-war employment and utilizing natural resources. In addition, steps are being taken within the provincial field to supplement the Dominion program for the rehabilitation of former members of the Armed Services. All provinces are co-operating in the Canadian vocational training program. The following outlines bring up-to-date the material given at pp. 852-860 of the 1945 Year Book.

**Prince Edward Island.**—A Department of Reconstruction was established in 1944 to promote and co-ordinate plans for provincial development and post-war employment. An agricultural survey of the Province, begun in that year, was completed in 1945.

A Provincial Advisory Reconstruction Committee was appointed to assist the Government in formulating policies for the economic betterment of the Province and to organize, in advance of the end of hostilities, work projects that would create employment and employment opportunities. Nine technical committees were appointed under the direction of the Advisory Committee with special studies

being made on education, tourist and transportation, rural electrification, housing, finance and revenue, fishing, agriculture, public health and welfare, and forestry. The Committee's report was received by the Government in July, 1945.

The 1945 Legislature enacted measures relating to town planning, the supplying of electric power, and the purchase by the Province of surplus war assets from the Dominion Government. Several amendments to that legislation were passed in 1946.

**Nova Scotia.**—In 1943, a Royal Commission on Provincial Development and Rehabilitation was appointed to study problems relating to the post-war expansion of industry and markets, and to the re-employment of ex-service men and war workers. Its report was tabled in the Legislature late in March, 1945.

A Committee on Rehabilitation of Agriculture for Nova Scotia was set up in 1944. This Committee is studying rural electrification, land conservation and improved land use, flood control, and certain technical aspects of provincial agriculture. The Government has presented to the Legislature a detailed plan for post-war improvement in social and industrial standards. Among the Government measures planned are: the extension of free treatment for tuberculosis, expenditures on highway construction and bridge building, education, the development of natural resources, and the establishment of a \$1,000,000 research organization composed of representatives from the University of Nova Scotia, the National Research Council, Ottawa, and provincial industries, under a competent scientist.

**New Brunswick.**—The following organizations have been established by the Province of New Brunswick to offer recommendations and to prepare plans for post-war reconstruction: (1) New Brunswick Committee on Reconstruction; (2) New Brunswick Natural Resources Development Board; (3) Department of Industry and Reconstruction.

*New Brunswick Committee on Reconstruction.*—The Committee has presented a report in which it proposes a long-term reconstruction program based on the further development of existing primary industries and the development and creation of secondary industries. Specific recommendations were made in the fields of natural resources, manufacturing, labour, education, health and welfare, housing and Dominion-Provincial relations.

In addition to the long-term program, the Committee recommends immediate plans for the post-war period relating to public works, forestry products, flood control and rural electrification.

*New Brunswick Natural Resources Development Board.*—This Board is now making numerous investigations, particularly with a view to the further development of the forest resources of the Province.

*Department of Industry and Reconstruction.*—This Department has recently been organized and is making a series of studies on demobilization and rehabilitation. Close contact is being maintained with the Dominion Department of Veterans Affairs and other agencies in rehabilitation. It is also energetically engaged in a campaign of business stimulation—the promotion of new and the revival of old industries.

Recently, the Government has approved the establishment of a Handicrafts and Home Industry Division, to promote the production and handling of a full range of commodities in the fields of, wood, leather, metals, wool, ceramics, etc., stressing both the cultural and economic aspects.

During 1946, the Government has added a Fisheries Division working in close conjunction with the Dominion Department of Fisheries. A Fisheries Loan  
50871—54½

Board has been formed for the purpose of assisting fishermen in the purchase of gear and equipment, including boats, to encourage the modernization of fishing generally.

**Quebec.**—Various Departments of the Provincial Government have prepared plans relating to reconstruction in the post-war period, many of which are based on a provincial inventory of natural resources.

*Department of Lands and Forests.*—This Department is preparing considerable forest development and full advantage will be taken of modernized forestry control and exploitation. The industry will be encouraged to extend to the public the benefits of the newest methods for the scientific and economic use of wood.

*Department of Labour.*—This Department is planning retraining centres for the following purposes: (1) the rehabilitation of workmen injured in industrial accidents; (2) the training of returned soldiers to fit them for a place in industry; (3) the training of apprentices for the building trades.

*Department of Roads.*—A \$30,000,000 program of new road construction to be spread over a four-year period has been approved by the Legislature.

*Department of Trade and Commerce.*—The policy of this Department is to foster trade in the domestic as well as in foreign markets. The Department works in close co-operation with Canadian Trade Commissioners in foreign countries and maintains an office at New York city to assist Quebec producers in selling their merchandise. The British West Indies territory is also covered by a provincial representative once or twice a year.

In an endeavour to provide reliable information for new industries wishing to establish in the Province, a detailed survey of all cities and larger towns has been undertaken and will be ready for publication sometime during 1946.

**Ontario.**—In the Province of Ontario, post-war matters are receiving the particular attention of all Departments of Government. A comprehensive forestry scheme will be undertaken by the Department of Lands and Forests, covering forest protection and management and fire control. In this connection, a preliminary start was made in the war period so that the program could be fully implemented soon after the end of hostilities. The Department has begun to set up a perpetual inventory of its forest resources.

A key agency of post-war reconstruction is the Department of Planning and Development, established in March, 1944. Three branches are now operating: (1) *Conservation*—which deals with all natural resources except coal, oil, gas and minerals. The Department has been concerned primarily with problems of the farming areas of southern Ontario. (2) *Town and Community Planning*—which co-operates with the Department of Municipal Affairs in assisting municipalities in handling problems of growth and administration. (3) *Trade and Industry*—which supplies industrial engineering services to all communities and industries in the Province. In conjunction with Ontario House at London, England, this Branch seeks to foster post-war trade with European countries.

*Surveys.*—A number of important investigations and surveys have been undertaken. The Interdepartmental Committee on Conservation and Rehabilitation co-operated with the Dominion Advisory Committee on Reconstruction in completing a survey of the Ganaraska River region. The final report, made public on Oct. 15, 1944, recommended a comprehensive program of soil conservation, reforestation and flood control, based on the entire river system. The work of this Committee has been taken over by the Conservation Branch of the Department of Planning and Development.

The Ontario Agricultural Commission of Inquiry was established in September, 1943, with wide representation from farm groups. In March, 1945, it reported on the subjects of soil conservation, agricultural credit, education, rural organization, live stock and dairying and agricultural floor prices. Its recommendations in regard to marketing problems are still forthcoming. The Commission of Inquiry largely superseded the Ontario Committee on Agricultural Policy, set up in April, 1943.

As a result of the presentation of the Report of the Ontario Mining Commission on Oct. 5, 1944, the Government passed enabling Legislation to implement a great many of its recommendations therein contained. Four provincial resident geologists are now employed by the Department. These are located at Port Arthur for the Thunder Bay District, Kenora for the Patricia District, Timmins for the Porcupine area, and Swastika for the Kirkland-Larder area.

Announcement was made early in 1946 by the Minister of Highways that a road would be built in the course of the year to connect Quibell on the C.N.R. transcontinental line with Red Lake. A considerable increase in the number of geological parties for the 1946 field season was reported.

A Committee on Planning, Construction and Equipment of Schools in Ontario was appointed in November, 1944, to inquire into, and report upon, the planning and equipment of schools; standard methods of construction; standards for mechanical services; and the useful physical life of school buildings. It has issued an interim report upon the construction of small elementary schools and is engaged in the preparation of further reports on school building.

A Royal Commission on Education, with very wide terms of reference, is currently conducting hearings. It has received many briefs covering a wide range of problems.

*Rural Electrification.*—The Hydro-Electric Power Commission of Ontario has planned a "Five-Year Plan for Post-War Rural Hydro Development", involving an expenditure of about \$22,000,000 by local Hydro Commissions on labour and materials, with the Ontario Government providing a grant-in-aid to cover 50 p.c. of the cost. Additional rural power lines will be built to the extent of 7,000 miles; some 57,900 new rural customers will be served; and total expenditure by Hydro and power consumers will approximate \$63,000,000.

*The Social Security and Rehabilitation Committee.*—This Committee operates under the Social Security and Rehabilitation Act, 1943. It consists of members from the various regions of the Province and its purpose is to co-ordinate the activities of local committees and to consider problems of rehabilitation that come before it. Under the Department of Education, in collaboration with the Dominion Department of Labour, the Ontario Training and Re-establishment Institute is carrying on the Canadian Vocational Training Program for veterans. The Institute is at Toronto but has eight branches in other cities of the Province.

The University of Toronto is offering a number of courses especially designed for veterans. Part of the activities of the University for veterans is carried on at Ajax, Ont. A special course in institutional management is being given at the University for those seeking managerial positions in hotels, restaurants and other institutions that cater to the public.

**Manitoba.**—A number of agencies co-operate in formulating post-war plans for the Province:—

*Sub-Committee of the Cabinet.*—Under the chairmanship of the Premier, the Sub-Committee receives and considers reports from the Post-War Reconstruction

Committee. The Chairman delivered a brief to the Dominion House of Commons Special Committee on Reconstruction and Re-establishment in June, 1943.

*Post-War Reconstruction Committee.*—This Committee, consisting of all Deputy Ministers and an Economic Adviser, co-ordinates post-war reconstruction activities of all Government Departments and initiates further studies, several of which have been published. An interim report for consideration by the Advisory Committee was submitted in May, 1945.

*Advisory Committee on Co-ordination of Post-War Planning.*—Representing various economic groups from urban and rural Manitoba, the Committee was set up by Order in Council on Apr. 18, 1944, to consider submissions and undertake research. Its aim was the integration of the provincial reconstruction program. Interim reports were submitted to the Premier on Dec. 15, 1944, and Feb. 4, 1945, and the final report on Jan. 21, 1946.

*Special Select Committee of the Legislature.*—At the 1944 Session, and re-empowered at the 1945 Session, a Special Select Committee of all the Members of the Legislative Assembly was constituted for the purpose of reviewing, criticizing, and formulating proposals and plans and advising and assisting the Government in the formulation of its post-war program.

*Joint University Studies.*—In 1941, at the request of the Governor of Minnesota, U.S.A., and the Premier of Manitoba, the University of Minnesota and the University of Manitoba, together, investigated the effects of alternative peace settlements upon the economies of the Canadian Prairie Provinces and the central northwest region of the United States. Two reports have been published.

*Manitoba Electrification Enquiry Commission.*—Appointed in June, 1942, the Commission reported in favour of an extensive program of farm electrification. The recommendations of the Commission have been put to test by the Manitoba Power Commission and found to be substantially correct. (Report has been published.)

An extensive program of post-war projects has been prepared by the Government; for details see p. 856 of the 1945 Year Book.

**Saskatchewan.**—A Department of Reconstruction, Labour and Public Welfare was set up in 1944 but was replaced on Nov. 2, 1944, by the Department of Reconstruction and Rehabilitation. This Department has two divisions—Reconstruction and Rehabilitation.

The Division of Reconstruction has the function of co-operating in any program that may be under consideration by the Dominion Government, and of initiating projects contemplated by the Government of Saskatchewan looking to the permanent development of the Province and to the raising of the standard of living of the people. Under this Division are:—

- (1) Committee on Rural Housing which has presented its report and as a result two bulletins, "A Guide to Farm Home Planning and Modernization" and "Modernizing Farm Homes", are available for distribution. These bulletins contain plans of the type of home most suited to farm conditions as well as plans showing systems of water supply and sewage disposal.
- (2) Committee on Rural Electrification which is studying the whole question of rural electrification and the distribution of power to small hamlets and villages not yet provided with this service.
- (3) Committee on Co-operative Farming which has presented an interim report on a practical program of co-operative farm development.
- (4) An investigational laboratory is in operation for the purpose of testing various natural resources of the Province for industrial use.

In addition to the establishment of the Department of Reconstruction and Rehabilitation other legislation in the field of reconstruction was passed at the sessions of 1944 and 1945. Saskatchewan legislation included measures concerning health, labour, education and agriculture.

*Industrial Reconstruction.*—A Department of Co-operation and Co-operative Development was established which is setting up a research service to inquire into the methods of operation of co-operative enterprise.

The Minister of Natural Resources and Industrial Development is empowered to take over any mine or quarry, mining machinery, lumber mill, or building machinery, dam, etc., which are being or can be used for the development of water power, and to operate them in the interest of the Province; also to develop and utilize the resources of the Province which are still Crown property. The Government has already purchased a power company and other basic manufacturing enterprises and is planning to increase the scope of its activities.

The Provincial Treasurer is empowered to create a Reconstruction and Rehabilitation Fund of up to \$5,000,000 (in addition to amounts that may be appropriated by the Legislature for reconstruction and rehabilitation) to meet capital expenditures. A \$1,000,000 issue of 3 p.c. industrial development bonds has been over-subscribed.

Details of the rehabilitation program are given at pp. 857-858 of the 1945 Canada Year Book.

*Crown Companies.*—A Crown Corporation in the right of the Province known as the Saskatchewan Reconstruction Corporation was established in 1945, under the Department of Reconstruction and Rehabilitation, for the purpose of dealing with War Assets Corporation in the purchase of surplus war materials and Air Force buildings which might be made available in the Province of Saskatchewan. This Corporation has extended its activities to include the establishment of a machine shop and repair depot where a staff of war veterans is employed in overhauling and repairing equipment purchased from War Assets Corporation before it is turned over for use by the various Departments of the Saskatchewan Government and co-operative organizations and municipalities. This shop also does repair work on automotive equipment owned by the Saskatchewan Government.

A Crown Corporation known as the Saskatchewan Reconstruction Housing Corporation was organized to provide an immediate and efficient method of using Air Force buildings for temporary housing purposes. To date, 200 dwelling units have been provided together with barrack accommodation for at least 1,000 service personnel taking vocational and educational training.

*Alberta.*—The Alberta Post-War Reconstruction Committee, set up on Mar. 30, 1943, conducted investigations into the provincial economy and its post-war problems through sub-committees on agriculture, education, finance, industry, natural resources, public works and social welfare. Also assisting were the Research Council of Alberta and the Post-War Survey Management Committee.

Implementation of the Post-War Reconstruction Committee's recommendations is the responsibility of the new Department of Economic Affairs, or of other appropriate Departments of Government. The Department of Economic Affairs, established at the 1945 Session of the Legislature, was empowered to initiate and sponsor projects designed to aid in rehabilitation and reconstruction.

In a brief to the Dominion House of Commons Committee on Reconstruction and Re-establishment, the Premier of Alberta outlined a potential \$250,000,000 program that feasibly could be undertaken to provide social services, roads, bridges, housing and irrigation projects.

Among recommendations of the Post-War Reconstruction Committee so far acted upon are those pertaining to normal-school training as a branch of university work leading to a degree; appointment of a Veterans Welfare and Advisory Commission; appointment of the Alberta Power Commission and the Industrial Development Board; enactment of new apprenticeship laws; and the establishment of a new Department of Public Welfare. Also established is the Veterans Land Settlement Scheme, which provides veterans with half-section farms on nominal crop-rental terms prior to the granting of clear title. Veterans qualifying are given cash grants by the Dominion Government under the Veterans Land Act.

At the 1946 Session of the Legislature, provision was made for the Department of Economic Affairs to establish branches concerned with housing and cultural welfare.

In 1943, the Post-War Reconstruction Fund Act appropriated \$1,000,000 for future projects. In subsequent years, this amount was raised to \$5,000,000, and in 1946 a start was made on a program of road and highway development, utilizing these monies. The post-war program now under way is a broad one and includes industrial expansion, educational benefits, a province-wide health and hospitalization scheme, extension of cultural and recreational activities, housing assistance in towns, cities and on farms, and a general up-grading of life and living in the Province.

**British Columbia.**—The following organizations have been established by the Government of British Columbia in the field of reconstruction: the Bureau of Post-War Rehabilitation and Reconstruction, which in 1944 replaced the Post-War Rehabilitation Council under the Committee of the Executive Council; the Interdepartmental Advisory Committee on Industrial Development and Rehabilitation; and the British Columbia Industrial and Scientific Research Council.

*Bureau of Post-War Rehabilitation and Reconstruction.*—This Bureau has been set up by the Province to co-ordinate all Provincial services concerned in post-war activities; and to collaborate with Dominion Departments and other provinces, municipal councils, and with private enterprise, with a view to formulating plans to create and maintain productive employment and to develop the human and material resources of the Province.

As a result of an intensive survey, the Bureau of Post-War Rehabilitation and Reconstruction, through ten Regional Advisory Committees, has listed in printed bulletin form (546) carefully investigated small businesses, trades and professional openings throughout the Province. These bulletins have been distributed to all Dominion and provincial rehabilitation officials concerned.

A Regional Planning Division of the Bureau has been established for the purpose of co-ordinating information both in the Departments and in the ten regional divisions of the Province regarding the resources and requirements of the various regions.

*Interdepartmental Advisory Committee on Industrial Development.*—This Committee functions as a clearing house for administrative problems in the field of industrial development in which the interests of the various Departments are concerned.

It works with the Bureau of Post-War Rehabilitation and Reconstruction in an advisory capacity. A Sub-Committee on Reconversion of Industry has been appointed which has sponsored special surveys in various industries to study the problems of reconversion; sub-committees on industry inquiries have also been set up in several regional areas of the Province.

*British Columbia Industrial and Scientific Research Council.*—The Council acts as a clearing house to: (1) co-ordinate the work of research units and avoid duplication; (2) initiate and generate new research work; (3) relate research work to other problems of industrial rehabilitation in the post-war period; (4) apply the results of research to the creation of new industries and trade-expansion programs. Research problems studied by the Council are undertaken on the recommendation of one of five Technical Advisory Committees, namely: agriculture, forestry, fisheries, mining and metallurgy, and power and irrigation. An Industries Advisory Committee has been formed to ensure industrial application for the research projects of the Technical Advisory Committees, to provide assistance for existing secondary industries, and to aid in the establishment of new industries in the Province.

*Post-War Program.*—Some of the specific projects already approved or under consideration are as follows:—

*Electrification.*—A Hydro-Electric Power Commission has been established consisting of three members. The Commission is authorized to acquire and consolidate companies now serving communities and to develop power throughout the Province. To date, \$20,000,000 has been allocated for this purpose. The Commission has already acquired several power companies. Contracts have been let for the general development program at Campbell River, B.C., covering expenditures of \$2,294,945 for the extension of rural electrification on Vancouver Island.

*Public Works.*—The largest appropriation, \$22,850,000, in the history of the Province, for intended expenditure during 1946, includes: Uncompleted contracts, \$600,000; Kootenay Lake ferry, road and landing, \$750,000; Peace River connection, \$6,000,000; Hope-Princeton highway, \$5,000,000; capital development, \$5,000,000; new institutional buildings, or additions to existing ones, \$1,700,000; to complete approved buildings, or those structures for which tenders have been received, \$2,950,000; and for ordinary public works expenditures, \$268,033.

*Agriculture.*—Soil surveys have been carried out over more than 3,651,000 acres and 275,000 acres have been mapped and surveyed in a continuing land utilization survey. The Government has been authorized to reserve 1,000,000 acres of Crown lands which will be granted to British Columbia veterans settling on farms under the Dominion Veterans' Land Act; an extra appropriation of \$70,000 has been granted for increased horticultural services, additional technical staff for the Live-Stock Branch, extra agricultural development, and land clearing and additional stumping-powder rebates.

*Education.*—The Government has authorized \$95,000 for urban occupational training and students aid; \$148,900 for rehabilitation training; \$2,446,000 a year to implement recommendations of the Cameron report on education costs; \$302,128

for University of British Columbia on account of new faculties and to provide for a vastly increased enrolment; \$800,000 for grants to meet one-half the construction costs of new schools; \$75,000 for emergency accommodation at the University of British Columbia for war veterans, and \$25,000 for a war memorial gymnasium; \$500,000 for a new industrial school for boys near Nanaimo; and \$800,000 for a new university physics laboratory on which work has started.

Mining.—The Department of Mines is authorized to make grants to prospectors up to \$500. Training schools for prospectors have been authorized and \$150,000 for mining roads and trails.

Health.—Additional grants are provided: \$316,938 for social assistance; \$155,329 for the Board of Health and management of hospitals; \$265,185 to care for mentally deficient persons; \$2,600,000 to aid in construction of new hospitals; and \$150,000 for a new home for nurses at Tranquille Sanatorium.

Lands and Forests.—The Department of Lands and Forests is to receive \$650,685 to implement, in part, recommendations of the Sloan Commission.

Public Works.—The Government is authorized to borrow up to \$15,000,000 for the creation of a fund to be used for post-war reconstruction in the Province.

Slum Clearance.—A sum of \$500,000 is set aside to assist municipalities to take advantage of the Dominion legislation on slum clearance.

## CHAPTER XXIII.—PRICES\*

### CONSPECTUS

	PAGE		PAGE
SPECIAL ARTICLE: Activities of the War-time Prices and Trade Board 1945-46	851	SECTION 3. INDEX NUMBERS OF SECURITY PRICES.....	865
SECTION 1. WHOLESALE PRICES OF COM-MODITIES.....	858	SECTION 4. INDEX NUMBERS OF BOND YIELDS.....	867
SECTION 2. COST OF LIVING.....	861		

For purposes of statistical analysis, commodity prices are usually divided into two principal groups, wholesale prices and retail prices. The term 'wholesale' is not used literally, and primary producers, factory and jobbers quotations, as well as actual wholesale prices, are often included in this group. Markets in which this type of price is quoted are usually well organized, and frequently very sensitive. They are responsive to changing business and monetary conditions. Wholesale quotations are preferred, therefore, for sensitive index numbers of prices designed to reflect price reactions to economic factors.

Retail prices may be strongly influenced by local conditions and are less sensitive. There is ordinarily a lag of several months between this type of quotation and its wholesale counterpart. Retail prices are important from a statistical point of view, however, because they indicate changes in living costs and, along with measurements of income, show fluctuations in the economic well-being of the community.

#### ACTIVITIES OF THE WARTIME PRICES AND TRADE BOARD, 1945-46†

The functions of the Wartime Prices and Trade Board are to keep down prices and living costs and to promote an adequate supply and orderly distribution of essential civilian goods and services. The activities of the Board up to the end of 1944 are outlined in previous issues of the Canada Year Book. This article deals with developments in 1945 and the first four months of 1946, and outlines the problems facing the Board in the transition from war to peace. Since conditions are changing rapidly much of the material may no longer be applicable at the time of publication. Changes in the controls over the distribution of goods in short supply are described in the Chapter on Internal Trade (pp. 574-578). A more comprehensive account of the Board's activities may be found in the four Reports to Parliament (King's Printer, Ottawa).

**Price Control.**—The end of the War and the period of reconversion from war to peace necessitated important changes in the application of price control, though it did not mean that the need for controls had passed. There were still serious shortages of goods in relation to the demand, production costs had in many instances risen substantially, and prices in other countries were relatively high and rising. Controls were, therefore, still needed to prevent an inflationary spiral of prices and costs.

\* Except as otherwise credited, the sections of this Chapter have been revised by H. F. Greenway, M.B.E., M.A., Chief, Prices Branch, Dominion Bureau of Statistics. This Branch compiles and publishes statistics on: Wholesale and Retail Prices and Services; Cost of Living; Prices of Securities and Bond Yields. For a complete list of the publications of this Branch see Chapter XXXII, Section I, under Internal Trade.

† Prepared by the Research Division, Wartime Prices and Trade Board.

Some of the shortages in Canada reflected the world-wide shortages of basic necessities that were brought into sharp relief by the end of the War. To help meet the urgent requirements of liberated countries and the United Kingdom, Canada restricted the domestic supply of such foodstuffs as meat and cereals. World shortages also affected Canada's supplies of such imports as textiles, sugar, oils and fats.

In other fields, such as metal goods, the decline of war production did, of course, open the way for an expansion of civilian supplies. But progress was slow owing to the delays involved in reconverting plants, to bottlenecks in the supply of materials and components, and to industrial disputes. Shortages and strikes in the United States seriously affected Canada's progress in reconversion because of this country's dependence on United States for materials and parts.

While supplies of goods were restricted, the actual and potential demand was at a record peak. Personal incomes showed little change from their high wartime level and the rate of spending continued to increase as the rate of saving decreased and some people drew on their accumulated wartime savings. There was thus a continuing gap between supply and demand which sustained the pressures toward inflation.

Inflationary pressures were also sustained by the continuance of higher production costs. Firms that had been engaged in war production were returning to the production of peacetime goods under cost conditions substantially different from those of 1941. Firms that had been able to absorb cost increases on their civilian products because of profitable war contracts were now deprived of this source of revenue. Continuing shortages of materials and labour meant that possible factors making for lower costs were slow to assert themselves.

In view of the persistence of these inflationary pressures, price control and some of the other war-imposed controls had to be continued well into the period of transition. The necessary powers to continue needed emergency controls until approximately the end of 1946 were embodied in the National Emergency Transitional Powers Act, which came into force on Jan. 1, 1946. Price control did not, however, operate in the same way as it had during the War; it was adapted to the needs of the new economic environment, and steps were taken in the direction of the ultimate goal of removing all wartime controls.

The war effort had absorbed so much of Canada's manpower and productive resources that it had not only ensured full employment but had actually required a curtailment of non-essential civilian activity. Price control, which covered chiefly the civilian sector of the economy, could adhere quite rigidly to the "basic period" principle. Maximum prices were generally established at the levels prevailing in the "basic period"—Sept. 15 to Oct. 11, 1941—and in considering applications for price adjustments the essentiality of the products was taken into account as well as the over-all financial position of the applying firm or industry. With the end of hostilities, however, production was no longer underwritten by huge Government expenditures, and the maintenance of employment depended on the prompt expansion of production for civilian markets, which in turn depended greatly on the existence of adequate incentives. Under these conditions too rigid an adherence to basic period standards might, in certain cases, have obstructed production and employment. Thus, while over-all financial need remained the determining factor in considering applications for price adjustments, the Board had to take into account prospective as well as past earnings and had to be prepared to give prompt decisions in which the elements of judgment and estimation necessarily played an important

part. For example, in determining the amount of relief required in a particular case, consideration had to be given to probable costs and volume of production for the coming year, factors that were inevitably subjects of opinion and judgment rather than established fact. In addition, the Board could no longer make a clear distinction between essential and non-essential production in the application of pricing policy, since, in terms of employment, most forms of production became desirable with the shift to peacetime activities. Finally, in the interests of maintaining desirable production the Board had also to be prepared to consider limited price adjustments to meet losses which could be shown to exist in the production of significant lines of goods even when over-all financial need could not be established.

**Price Adjustments.**—In a number of industries the cancellation of war contracts brought into clear relief substantial increases in costs which had remained hidden during the War, either because the goods in question had not been produced or because a large volume of war work had enabled manufacturers to absorb cost increases on their civilian output. At the same time it was difficult to estimate prospective costs of production of goods which had not been produced in volume often for some years. The problem of establishing maximum prices as closely in accord with basic period values as was practicable under prospective cost conditions was thus a very difficult one. The Board was, however, assisted considerably by the Government's action in reducing or eliminating certain taxes. Excise taxes on automobiles, cameras, record players and radios were reduced and the excise tax on electrical and gas appliances and fixtures was removed. The sales tax on building materials and production goods was removed and the war exchange tax was completely eliminated. The removal of these taxes provided substantial leeway for the absorption of increased costs within the framework of basic period prices. Even so, a considerable number of price adjustments were still required. Many of them were made on an individual basis, where particular firms could show the need for them. Some adjustments, however, were made on an industry-wide basis, and the more important of these are discussed briefly below.

On Apr. 1, 1946, the maximum prices of iron and steel and their products were increased by amounts approximately equivalent to \$5 per ton of steel ingot. The increase was necessitated by the loss of war contracts which had, during the War, enabled the iron and steel industry to sell to civilian markets at basic period prices in spite of serious increases in production costs. The manufacturers using iron and steel in their products were, with some important exceptions, permitted to pass on the price increases. In the farm machinery industry, relief had also to be provided since it was affected directly by the loss of war contracts and since on the products of this industry there were no war excise taxes to be removed or reduced.

Maximum prices of pulp and paper products were also increased on Apr. 1, 1946. Increases ranged from 5 p.c. to 10 p.c. for paper and paperboard and from 5 p.c. to 8 p.c. for converted products, but it was expected that at the retail level increases would be negligible. The price adjustments were necessitated by increased costs and they also had the effect of correcting inequities resulting from the uneven distribution of exports, which were never under price control.

Price increases were also authorized for furniture, and for butter, pork and certain other foods. It was emphasized, however, that these adjustments did not mean a weakening of anti-inflation controls, but rather a gradual and planned policy of adjustment to post-war conditions.

While some price adjustments were necessary if the expansion of civilian output was not to be retarded, this expansion also provided the basis for the ultimate decline of inflationary pressures. With the end of the War, genuine progress could be made in overcoming the shortages of civilian goods and equipment. Moreover, it was possible to look forward to a decline in costs in some directions as more skilled labour became available for civilian production, as shipping costs declined, as expensive substitute materials and abnormal sources of supply could be gradually dispensed with, and as civilian production increased towards full capacity. It was apparent, therefore, that the need for anti-inflation controls would eventually disappear, and plans were made for gradual decontrol.

**Removal of Subsidies.**—Since subsidies had to be removed before returning to a free price structure, their use was gradually reduced. All outstanding subsidy arrangements were reviewed with the aim of reducing or eliminating them at the earliest feasible time, even at the cost of some moderate price increases. With the end of the War, improved shipping conditions, the elimination of war risk insurance and the opening up of more economical sources of supply all combined to reduce the need for import subsidies on a number of products. The most significant item affected was petroleum, and during 1945 it became possible to eliminate completely subsidies on all petroleum imports except those entering the Prairie Provinces.

Other import and domestic subsidies, however, had been necessitated by cost increases which were likely to persist indefinitely, and which therefore had to be recognized sooner or later in the price structure. A considerable number of subsidies of this type were removed in 1945 and 1946, involving some price increases. For example, the subsidies on imported wool were removed (except for those on wool tops, worsted fabrics and yarns from unusual sources of supply) and subsidies on imported cotton were reduced appreciably (by about one-third at the time). These changes necessitated some moderate increases in the maximum retail prices of clothing and other textiles, though the system of price control was tightened in the whole textile field to ensure that the increases were limited only to the permissible amounts. The subsidy on petroleum products imported into the Prairie Provinces was reduced and maximum prices of petroleum products were increased. This subsidy had been necessitated by a shift to more distant sources of supply, and there was no prospect of any early reduction in the costs of such imports. On June 1, 1946, the consumer milk subsidy of two cents per quart was eliminated and control over milk prices was returned to the Provincial Governments.

**Import and Export Pricing Problems.**—The problem of removing import subsidies was closely related to other problems arising from the relatively low Canadian price level which was largely the result of Canada's success in keeping prices down during the War. The fact that Canadian prices had risen less than prices in many other countries tended to discourage imports. As the United Kingdom and other countries began to rebuild their trade, it became clear that a variety of imports from such countries would not be available at prices in line with those prevailing in the basic period. It was not feasible to bridge the gap between import costs and domestic ceilings by subsidy except in the case of essentials, since this would have been inconsistent with the policy of subsidy removal discussed above, and would have meant a rapidly increasing volume of subsidy payments as imports increased.

To some extent the problem was met by permitting price increases on imported goods which had formerly sold at lower prices than comparable goods made in Canada, or imported from other countries. This technique of "levelling up" was applied to a number of items which the United Kingdom was again able to supply. While such adjustments, combined with the acceptance of narrowed margins by Canadian importers and distributors, increased the range of goods that could be imported, their application was necessarily limited. A greater change in the method of pricing imports was necessary to permit the entry of goods which were beginning to be offered by countries where the War had resulted in pronounced increases in costs of production. A new procedure applicable to imports from a specified list of countries was therefore approved by the Government early in 1946. Under the new system, prices were to be fixed, on application by importers, at levels covering the cost of the goods but providing for some reduction in the normal margins of importers and dealers. This changed procedure was limited to imports from the United Kingdom, the U.S.S.R., France and other allied countries in Europe, China, India, Burma and Ceylon. The impact of the War on the economies of these countries had been severe and their price structures had risen to a point where many of their traditional exports could not be imported for sale in Canada at basic-period prices.

A major change in import subsidy policy was made in January, 1946. Until that time all imports of consumer goods had been eligible for subsidy consideration unless specifically declared ineligible. In keeping with the Government's policy of reducing and eliminating subsidies in the transition period, this procedure was reversed and all imports were declared ineligible for subsidy unless specifically declared eligible. A new statement on import subsidy policy was therefore issued. In general terms the revised statement left a substantial number of basic foodstuffs, clothing and fuel eligible for subsidy consideration. But durable goods, household furniture, hardware, plumbing materials, drugs and supplies used by farmers and fishermen (with some very important exceptions such as fertilizer and feed ingredients, binder twine and fishing nets) were no longer included on the eligible list. Importers of the goods which were excluded from subsidy by the new policy could, of course, apply for price adjustments in the usual way.

The difference of price levels between Canada and other countries also created problems in the case of goods that were important in Canada's exports. Since exports were not under price control and higher prices could be obtained for many goods in the United States and other markets, the domestic supply of many articles had to be protected by continued export control. In the period of reconversion, while shortages still prevailed, a balance had to be struck between the development of export markets and the needs of the domestic consumer, involving continuous co-operation between the Department of Trade and Commerce and the Wartime Prices and Trade Board.

**Suspension of Price Ceilings.**—An important experimental step in the direction of the removal of price control was taken in February, 1946, with the suspension of price control in regard to a number of goods. The articles affected were mostly non-staple commodities, and included cosmetics, jewellery, books, games, novelties, millinery, drugs, tobacco products and other items, as well as a number of services. The list of goods had been carefully selected and supply conditions with regard to most of them were such that no serious price increases

were expected. Most of the articles were of minor importance in the family budget, and in a number of cases it was becoming questionable if the effort and expense of effective administration would be commensurate with the benefits derived.

Price ceilings were suspended and not eliminated, so that they could be reimposed if unreasonable increases occurred. A survey of prices in the principal cities, taken before the suspension and repeated periodically thereafter, showed that there had been few significant price increases, except in the case of silverware which reflected the higher price of silver itself.

**Supply Controls.**—As indicated above, there were still severe shortages in Canada in the period of reconversion, but civilian production was increasing and, in contrast to the war situation, the aim of Government policy was to encourage the rapid expansion of civilian activity. Wartime controls which had restricted or prohibited particular kinds of civilian production were therefore not suited to the changed conditions of the transition period. Most of these controls were removed before the end of the War; their removal began in the latter half of 1944 and shortly after V-E Day very few of them remained. Where production of essential civilian goods was inadequate, reliance was placed upon positive measures designed to increase the type of production needed (e.g., the directive program for textiles, see p. 576) rather than upon negative restrictions.

The Prices Board also co-operated with other departments in gradually removing emergency restrictions on external trade, though a number of controls over exports had to be retained, as indicated above, in order to protect essential domestic needs and to maintain effective price control. The Board did, however, recommend the removal of export control over a number of commodities which were becoming available in adequate quantities. The Board also worked closely with the Department of Trade and Commerce in establishing export allocations for commodities in short supply, (e.g., lumber and textile products).

In the fields of food and textiles, where the most serious shortages continued in the reconversion period, the Board maintained important supply and distribution controls (see pp. 574-578). World demand for Canadian pulp and paper products increased sharply with the end of the War, and some controls over exports and over the allocation of supplies to domestic uses had to be continued. Control over newsprint and pulp exports was abandoned at the end of 1945, but the domestic allocation of pulp, newsprint, other papers and paperboard remained under a simplified form of control. While most simplification and standardization orders were withdrawn, the orders standardizing weights and grades of fine papers and paperboard remained as a means of ensuring maximum production.

The shortages of building materials became increasingly serious in 1945, owing to labour shortages and to the high volume of construction. The Wartime Prices and Trade Board assisted manufacturers in obtaining labour and, in some cases, authorized price adjustments to stimulate production. In January, 1946, responsibility for the supply of building materials was transferred to the Department of Reconstruction and Supply.

In the sphere of metal goods all Prices Board controls were removed except the restrictions on the use of metal containers, which were necessitated by the continuing shortage of tin. As a result of the serious supply problems in steel arising from the steel and coal strikes early in 1946, the Steel Control, which had been disbanded in 1943 was reinstated in the Department of Reconstruction and Supply.

**Rentals and Shelter.**—During 1945 the shortage of housing became an increasingly serious problem as returning veterans sought to set up households and as families that had been doubling up during the War looked for separate accommodation. While housing construction was on a scale comparable to that of the pre-depression years, it was hampered by shortages of building materials and labour and could only very gradually meet the large backlog of deficiencies left by the the low level of construction in the depression and in some of the war years.

**Eviction Control.**—In these circumstances continued control over rentals was essential if drastic increases were to be prevented. Since the over-all ceiling on rentals was imposed, rent control has been associated with the protection of tenants against arbitrary eviction, and indeed, without such protection, maximum rentals could scarcely have been enforced. The eviction control regulations were tightened drastically in July, 1945. Previously the regulations had provided that a landlord wishing to secure possession of his property could do so in certain circumstances on giving the tenant six months' notice. The right of eviction on monthly or weekly tenancies was subject to the further provision that the tenant could not be evicted in the winter months, October to April. As the housing shortage intensified, rented dwellings were sold in increasing numbers for occupancy by the purchaser, who then gave the requisite notice to vacate to the tenant. The number of these notices mounted rapidly and by the early summer of 1945 the prospect of widespread evictions had created a serious social problem. In the City of Toronto alone, there were some 3,500 notices to vacate maturing in the three summer months, in Vancouver there were 1,100, in Winnipeg 700. Many of these notices had been served upon families or dependents of service men, a great number of whom were still overseas, and it was recognized that alternative accommodation for the many thousands of people involved simply did not exist. In this emergency situation, the Government instructed the Prices Board to extend the existing system of eviction control by imposing a complete "freeze" upon all leases covering housing accommodation. Accordingly, landlords of self-contained accommodation were prevented for an indefinite period from serving notices to vacate on well-behaved tenants. All such outstanding notices were suspended, and in such cases provision was made whereby the landlord could appeal to a Court of Rental Appeals, the decision on the appeal being based on an assessment of the relative burden of hardship involved.

This "freeze" did not apply to notices given where the landlord intended to subdivide the property so as to accommodate more people. Nor did it apply to a veteran wishing to return to his home which he owned before enlistment, or returning to accommodation owned by a member of his immediate family. For these latter cases special regulations were made enabling the veterans to recover the accommodation.

In the case of commercial accommodation, the end of the War and the needs of the reconversion period required certain relaxations in the eviction control regulations to ensure that these controls would not obstruct the expansion of peacetime business and employment. During 1945 a landlord of commercial accommodation requiring it for his own use had to give the tenant six months' notice, and could do so only if he himself had been forced to vacate accommodation in which he had been carrying on his business. To meet the requirements of the transition period a new code was put into effect in December defining various circumstances in which a landlord could recover possession of his property in the normal way. The

most important of these is the case where the new occupant of the accommodation will be able to make a better use of the land (e.g., the replacement of a parking lot by a substantial building). Some of the other conditions laid down in the code are as follows: where the new occupant will be able to provide substantially more employment of a permanent character than the existing tenant; where suitable alternative accommodation is available for the tenant; where the landlord or his son formerly conducted a business which was interrupted as a result of wartime conditions and now wishes to re-establish himself in business. Many hundreds of decisions have already been made under this code which, it is believed, have assisted materially in the expansion of peacetime enterprise.

**Emergency Shelter.**—Emergency Shelter Administrators were appointed at the beginning of 1945 in Halifax, N.S., Ottawa, Ont., Hull, Que., Toronto, Ont., Hamilton, Ont., Winnipeg, Man., Vancouver, B.C., and Victoria, B.C., to promote the utilization of dwelling space to the best advantage. The movement of families into these congested areas was controlled by a permit system, and surveys of vacant dwellings and other available space were undertaken.

By the fall of the year the system of permit control had to be abandoned since demobilized service men and ex-warworkers seeking civilian employment could not be barred from admission to the main industrial centres. By that time serious overcrowding was no longer confined to the major cities but had spread to all areas, and the sphere of the Emergency Shelter Administration was expanded to cover the whole Dominion. By September 15, 1945, every province had been declared an Emergency Shelter area and Emergency Shelter Officers were appointed for the various Regional Offices of the Wartime Prices and Trade Board. The duties of these officers were primarily to assist municipalities in dealing with their housing problems, making use of certain emergency powers which the municipalities did not have.

At the end of 1945 responsibility for the Emergency Shelter Administration was transferred from the Wartime Prices and Trade Board to the newly established Central Mortgage and Housing Corporation.

### Section 1.—Wholesale Prices of Commodities

Wholesale price index numbers in Canada cover the period dating from Confederation in 1867. An intermittent decline characterized the first 30 years of this interval, followed by a gradual advance for a period of 16 years prior to the outbreak of war in 1914; from an average of 43·6 in 1897, the general wholesale index (1926 = 100) advanced without appreciable interruption to 64·4 in July, 1914. By the end of the War in November, 1918, this index had reached 132·8, and it continued upward to a post-war inflationary peak of 164·3 in May, 1920. The subsequent deflationary period lasted about two years, and between 1922 and 1929 price levels remained in comparative stability. Annual averages in this interval held between a high of 102·6 for 1925 and 95·6 for 1929. For the four years following 1929, depressionary influences were so severe that prices fell to the level of those of 1913. In February, 1933, the wholesale index touched an extreme low

of 63.5 before turning upward again. Irregular recovery then continued until 1937, but the highest point reached, 87.6 in July, 1937, was substantially below the 1926 average. The collapse of the wheat market in 1938, along with fairly general depression in other markets, carried wholesale price levels just prior to the outbreak of war in 1939 down to about eleven points above the 1913 level. The August, 1939, index of 72.3 marked the extreme low of a two-year decline. The movement

of prices prior to the outbreak of the War of 1939-45 was quite different, therefore, from that which preceded the War of 1914-18. The relatively low level of prices in August, 1939, probably influenced the sharper initial advance at the outbreak of war. However, during 1940 price levels steadied and showed no sign of a steep increase until 1941. By that time, great expansion in wartime production had made serious inroads into stocks of nearly all basic commodities and, at the end of 1941, wheat remained the only important commodity for which stocks exceeded predictable requirements. The introduction of general price control in December, 1941, followed a year in which wholesale prices had advanced 11.0 p.c. as compared with 3.1 p.c. in 1940. The effectiveness of control is indicated by the fact that percentage increases in wholesale prices amounted to only 3.7 and 5.7 for the years 1942 and 1943, respectively, while the December, 1944, index remained the same as the December, 1943, figure. The December, 1945, index of 103.9 was 11.1 p.c. above that for December, 1941, when price control became generally effective. By that time, the gradual removal of wartime price controls had been commenced.

### 1.—Annual Index Numbers of Wholesale Prices in Canada, 1913-45, with Monthly Index Numbers, 1942-45

(1926=100)

ANNUAL INDEX				MONTHLY INDEX

## Section 2.—Cost of Living

A consolidation of official cost-of-living indexes was made in 1940 when the index shown at p. 863, on the base 1935-39=100, replaced the Bureau of Statistics' preceding series on the base 1926=100, and also the Dominion Department of Labour's index on the base 1913=100. The Bureau's present index reflects changes in a fixed budget covering retail prices of commodities, services and shelter costs based upon the expenditure experience of 1,439 urban wage-earner families in the year ended Sept. 30, 1938. The record completed by these families was especially designed to provide budget data necessary for the accurate compilation of a cost-of-living index. This index reflects changes in the cost of the same level of living and no account is taken of shifting planes of living because of changes in economic circumstances, e.g., variations in income or direct taxation, or because of changing ages or variation in numbers of persons in the family. The basis of selecting families for the 1938 expenditure survey is described in the 1941 Year Book at p. 723. Further particulars of the methodology employed and a summary of the results of the Nutrition and Family Living Expenditures Investigation are given at pp. 819-821 in the 1940 Year Book. The detailed findings appear in a report entitled "Family Income and Expenditure in Canada, 1937-38".

The cost-of-living index budget does not represent a minimum standard of living; it is a budget based upon actual living expenditure records of typical wage-earner families.

It is important to remember that the index measures changes in the costs of the same level of living from month to month and year to year. The significance of this is at once apparent after comparing the rise in the index during the three and one-half years ended June, 1944, with the rise in average weekly earnings of industrial workers. In that period the cost-of-living index rose barely 2 p.c., while the average weekly wage received by workers in eight leading industries advanced by more than 27 p.c. Greater earnings have been reflected in greater spending despite heavier taxes and higher savings. This is borne out by figures of retail sales in 1945 which were more than 40 p.c.\* above corresponding 1941 levels.

Claims that the cost of living has risen substantially during the past four years are undoubtedly due in part to confusion between higher costs resulting from higher prices, and higher costs due to greater purchases. The cost-of-living index reflects the rise in prices, but not the increase in purchases.

The cost-of-living index budget is being kept up-to-date, although still measuring changes in the same general level of living. As basic changes in wartime consumption have occurred, the index budget has been adjusted accordingly. For example, with the sharp reduction in pleasure driving which resulted from gasoline and tire rationing, the budget allowance for motor-car operation was reduced and, correspondingly, the recreation budget allowance was increased. As certain foods have become very scarce or have been rationed, budget quantities for them have been reduced and a comparable allowance added to quantities of other foods. Fresh vegetables provide an illustration of new additions to the food index. When canned vegetables became very scarce, fresh carrots, turnips and cabbage were added to the food budget. Likewise the curtailment in supply of canned salmon and smoked fish was made up by additions of fresh fish.

\* As indicated by records from stores dealing chiefly in foods, clothing and household requirements.

Concern regarding items in the index budget has been paralleled by efforts to make certain of the accuracy of price records used to calculate the budget cost. Close and continued scrutiny of retail price returns, which the Dominion Bureau of Statistics receives from its 2,000 price correspondents, has produced the belief that price reporting has been honest and that price returns are accurate. However, to remove all doubt on this point, cost-of-living representatives have been assigned to important distributing centres across the Dominion. It is their duty to check price returns used in compiling the cost-of-living index, and to watch particularly for evidence of quality deterioration in goods for which prices are reported. It has been the Bureau's practice for many years to consider deterioration in quality as equivalent to a rise in price.

There is a tendency to think only of food when considering the cost of living. The index shows a rise of 35.2 p.c. in food prices from August, 1939, to December, 1945, although this percentage would be higher if it were not for the fact that prices of bread and milk are still close to pre-war levels. As bread and milk have served as restrictions on rising food costs, so have rents and miscellaneous items retarded the advance in total living costs. The miscellaneous group, despite its name, is very important, since it includes costs of health maintenance, transportation, personal care, recreation and life insurance. Due to rent control, the rise in rents has amounted to only 8.2 p.c. since August, 1939. The miscellaneous index also has risen 8.2 p.c. Considered together, these two groups are more important than food. If they had advanced by the same amount as food, that is by 35.2 p.c., the December, 1945, cost-of-living index would be 30.5 p.c. above the pre-war level instead of 19.1 p.c.

**Cost of Living in 1945.**—Movements of the cost-of-living index (1935-39=100) between December, 1944, and December, 1945, continued to be comparatively minor in character. During that period, the index advanced by 1.6 points (from

118.5 to 120.1). Changes in the different budget groups during 1945 are tabulated below. The decline in the fuel group was due to continued reductions in electricity rates.

Item	December, 1944	December, 1945	Point Change
Food.....	130.3	134.3	+4.0
Fuel.....	108.1	107.1	-1.0

**Regional Changes in Living Costs.**—In 1941 the Bureau established cost-of-living indexes for eight regional cities covering the period since August, 1939. These indexes, for the cities shown in Table 4, have been patterned after the official cost-of-living series for Canada, and include group indexes for food, fuel, rent, clothing, home furnishings and services, and miscellaneous items. The budget quantities employed for these calculations have been computed from expenditure records of wage-earner families in the year ended Sept. 30, 1938 (see p. 861). The only differences between the city and Dominion indexes are the base period used and the frequency of the publication of data. For the city records, August, 1939 = 100 is the base used instead of the five-year period 1935-39 and these indexes have been published for alternate months only.

Regional movements in living costs since the outbreak of the War of 1939-45 have been closely comparable to movements in the Dominion index, which advanced 19.1 p.c. between August, 1939, and December, 1945. During this period increases in the eight city indexes ranged from 17.0 to 22.6 p.c.

**Prices of Services.**—Service costs comprise approximately 19 p.c. of the family expenditure budget used in compiling the Dominion Bureau of Statistics cost-of-living index numbers. Trends in rates for some of the more important of these services since the beginning of the base period, 1935-39, are shown in Table 5.

The most notable of these is the decline in electricity rates which began in 1941 and was considerably accentuated in 1943, 1944 and 1945. There has been a gradual increase in hospital-room rates extending back to 1941 and carrying through 1945.

### 5.—Index Numbers of Domestic Service Rates, 1939-45

(1935-39=100)

Item	1939	1940	1941	1942	1943	1944	1945

## Section 3.—Index Numbers of Security Prices

Security prices have long been utilized in statistical measurements related to economic phenomena. They are generally sensitive to changing business conditions, although this valuable characteristic is sometimes overshadowed by the fact that their movements may be influenced greatly by speculative interest very remotely associated with underlying economic conditions. Thus in 1928 and 1929, common-stock prices advanced far beyond levels indicated by business profits and prospects. Security-price trends have also been at variance with other business indexes during the War of 1914-18 and the recent war.

**Investors Price Index Numbers of Common Stocks, 1945.**—Common-stock prices in 1945 recorded their sharpest rise since 1928-29. The investors December, 1945, index of 112.5 was 25.9 points above the December, 1944, level. Although the rate of increase accentuated somewhat in the latter half of the year, earlier gains were substantial, and continuous with the exception of a minor reaction in July and August. Prices in all sections of the market moved substantially higher during the year.

### 6.—Investors Index Numbers of Common Stocks, by Months, 1945

**Preferred Stocks, 1945.**—The movement of preferred stock prices in 1945 continued an almost unbroken rise, dating from the last quarter of 1942. During the year the preferred stock index increased 16.8 points to a December level of 146.6. This was the highest index ever recorded in this series, which dates back to January, 1927.

## 7.—Index Numbers of Preferred Stocks, by Months, 1927-45

(1935-39=100)

**Weighted Index Numbers of Mining Stocks.**—Very sharp gains in both gold and base metal stocks occurred during 1945. An index of gold stock prices advanced 29.6 points to 104.0, while base metals moved up 22.2 points to 113.8. A composite index of mining issues increased 27.6 points to 108.2. This increase returned mining stock prices approximately to pre-war levels.

**Section 4.—Index Numbers of Bond Yields**

The exceptional requirements of the war years of 1914-18 turned the Dominion authorities to the internal market, a field that had hitherto served mainly the needs of the provinces and municipalities. Historical records of long-term bond yields in the internal market prior to 1914 are obtainable, therefore, from provincial and municipal sources only. A record of Ontario issues from 1900 to date is available and was utilized for the first long-term bond-yield index constructed by the Bureau of Statistics. The relatively long period for which the record has been preserved makes this series of considerable value. At pp. 805 and 806 of the 1937 Year Book a statement is given showing the movements of Ontario bond yields since 1900.\* Since the War of 1914-18, however, the growing importance of Dominion financing in the domestic market has made it advisable to supplement the Ontario series with the Dominion index of long-term bond yields shown in Table 9. In 1941, this series was shifted to the base period 1935-39=100, and in 1942 it was revised back to January, 1937, on the basis of yields computed from a 15-year, 3 p.c. theoretical issue. Quotations for the theoretical yields are computed by the Bank of Canada.

\* This index of Ontario long-term bond yields may be found in the Bureau's monthly bulletin "Prices and Price Indexes", obtainable from the Dominion Statistician.

## PART I.—NATIONAL WEALTH AND INVESTMENTS

### Section 1.—National Wealth

Owing to the abnormal economic conditions that have prevailed over the past twelve-year period, no official estimate for national wealth has been made since that of 1933 which measured economic conditions at the lowest point of the pre-war depression. It is not considered desirable to establish another basis of national wealth until conditions have become normal. A short summary of the position is given at pp. 795-796 of the 1942 Year Book.

### Section 2.—British and Foreign Capital Invested in Canada and Canadian Dollars Invested Abroad\*

Investments of external capital in Canada are large and have played an important part in the development of the country. British investments in Canada occupied the primary place in investments of external capital before the War of 1914-18 but United States investments during that War and in the inter-war years grew sharply and soon exceeded the amount of British capital invested in Canada. During the inter-war years there were large flotations of bonds in the United States by Canadian governments and corporations and heavy investments of capital by United States corporations in branch plants and subsidiaries in Canada during that

\* Prepared under the direction of C. D. Blyth, M.B.E., B.A., Dominion Bureau of Statistics. In so far as this subject relates to the balance of international payments it is dealt with at pp. 560-572. More detailed information on this subject is given in "The Canadian Balance of International Payments, 1926-43", published by the International Payments Branch, Dominion Bureau of Statistics.

period. But during the same period there was considerable investment of Canadian capital in the United States and elsewhere, partly arising from the expansion of Canadian enterprises abroad and partly from Canadian portfolio purchases of foreign securities usually floated in the United States. The Canadian position before the War of 1939-45 was predominantly that of a mature debtor country, and this situation had significant effects upon the Canadian balance of international payments, giving rise to substantial payments of interest and dividends to foreign investors, and leading to large movements of capital between Canada and other countries, particularly for the redemption of Canadian securities held abroad.

The effect of the War of 1939-45 has been to reduce the balance of Canadian indebtedness to the United Kingdom very materially. Canadian repatriations of securities held in the United Kingdom amounted to more than \$1,000,000,000 during the War. About \$703,000,000 of this took the form of official repatriations. In addition there was the loan to the United Kingdom in 1942 of \$700,000,000, although Mutual Aid and the \$1,000,000,000 contribution by Canada to the United Kingdom provided the principal means of financing the British wartime deficiency of Canadian dollars (see also pp. 560-572). As a result of these changes, British investments in Canada at the end of the War were reduced to a total of the general order of \$1,600,000,000. British holdings are now limited to relatively small amounts of provincial and municipal securities in addition to the variety of Canadian corporation securities still held in the United Kingdom. Canadian investments in the United Kingdom, which were small at the beginning of the War, show minor changes apart from the 1942 loan to the United Kingdom of which about \$561,000,000 was outstanding at the end of 1945. The additional credit to the United Kingdom by the Canadian Government of \$1,250,000,000 arising out of the financial agreement between Canada and the United Kingdom of Mar. 6, 1946, will further affect the balance of indebtedness when the credit has been drawn upon.

In contrast to the reduction in Canadian indebtedness to the United Kingdom there has been an appreciable increase in United States investments in Canada, arising out of private capital movements. United States investments in Canada are now larger than before the War and Canadian private investments in the United States are smaller. But, offsetting this increase in long-term indebtedness to the United States, there was during the War, a very substantial increase in Canada's official liquid reserves of gold and United States dollars, which, at the end of 1945, had a value of \$1,508,000,000. As increases in United States investments in Canada, plus private liquidations of Canadian holdings of United States securities and other assets were of the same general magnitude as the wartime increase of \$1,115,000,000 in liquid reserves, the balance of Canadian indebtedness to the United States at the end of the War was not much different from that existing at the beginning of the War, although the composition of assets and liabilities was altered. The principal form which the inflow of United States capital to Canada took during the War was increased purchases of Canadian bonds, particularly direct and indirect issues of the Dominion Government and Provincial Governments. There has also been a considerable increase in the value of direct United States investments in branches and subsidiary companies arising mainly out of re-investments of earnings.

Another development affecting Canada's international investment position is the extension of export credits under the Export Credits Insurance Corporation Act. The export credits of \$750,000,000 now authorized under the Act along with

the loan to the United Kingdom are the principal forms of Canadian lending during the transitional years following the War. These credits are for the purpose of facilitating and developing trade between Canada and the borrowing countries by making it possible for them to pay for Canadian products during the transitional years. The export credits when fully drawn down will be prominent elements in the international investment position between Canada and the borrowing countries. Canadian membership in the International Monetary Fund and the International Bank for Reconstruction and Development will also give rise to other capital movements.

Tables 1 to 3 give summary figures of British and foreign capital invested in Canada and Canadian capital invested abroad for the years 1926, 1930, 1933 and 1939. These figures comprise a new series employing a different basis of valuation and are not comparable with those previously published in the Year Book.

**British and Foreign Investments in Canada, 1939.**—At the end of 1939 total British and foreign investments in Canada were estimated at \$6,926,000,000. Investments held in the United Kingdom were estimated at \$2,466,000,000 and in the United States at \$4,190,000,000, which include investments held in those countries for residents of other countries. The remaining amount, \$270,000,000 was owned in other overseas countries.

More than half the investment in Canada in 1939 was represented by bonds and debentures, which gave rise to large contractual payments of interest requiring foreign exchange. This interest amounted to about \$136,000,000, the larger portion of which represented a payment to the United States in Canada's current account. This total of Canadian bonds and debentures owned abroad was, however, only about one-third of the total funded debt of the Canadian Government and corporations, which approximated \$10,000,000,000 at the end of 1939.

Investment by non-residents in Canadian businesses amounted to about \$5,254,000,000. This investment was of varying importance in different industries, amounting to 79 p.c. of the total investment in the chemical and allied products group, but only 17 p.c. in the textile group. The average percentage of non-resident ownership in all manufacturing enterprises was 42 p.c., in mining and smelting companies 40 p.c., in railways 57 p.c., in central electric station companies or commissions 25 p.c., and in merchandising establishments 9 p.c.

An important part of the United States investments in Canada was represented by so-called direct investments—investments in branch, subsidiary and controlled companies, including branch plants of United States industries operating in Canada. This investment amounted to \$1,919,000,000 at the end of 1939, more than half of which was in manufacturing establishments. Making up this direct investment, there were at least 1,580 Canadian subsidiaries of United States companies and 381 unincorporated branches in which the amount of capital was appreciable. The investment in manufacturing establishments controlled in the United States constitutes about one-third of the total investments in all manufacturing industries in Canada.

Portfolio investments in Canada owned in the United States amounted to about \$2,186,000,000 in 1939, apart from scattered individual holdings of securities included in the total United States investment in branch, subsidiary and controlled companies. Most of these portfolio investments were made up of holdings of Canadian bonds, which amounted to \$1,809,000,000.

The major part of British investments in Canada and also of the investments of other overseas countries in Canada were made up of portfolio investments. Of the total of \$1,988,000,000 British portfolio investments, \$1,315,000,000 represented bond holdings. The book value of British holdings of stock of Canadian controlled companies was also large, amounting to about \$660,000,000; most of this was represented by holdings of railway stock. British direct investments in branch, subsidiary and controlled companies totalled \$366,000,000.

<sup>1</sup> Includes some investments held by nominees in the United Kingdom and the United States for residents of other countries.

**Canadian Investments Abroad, 1939.**—Canadian direct and portfolio investments abroad totalled \$1,340,000,000 in 1939, \$898,000,000 of which represented investments in the United States, \$74,000,000 in the United Kingdom, \$76,000,000 in other Empire countries, and \$292,000,000 in other foreign countries. These figures exclude the investments abroad of Canadian insurance companies and banks and official assets such as cash balances, gold and intergovernmental credits. The external assets of the insurance companies and banks must be considered in relation to the external liabilities of these concerns arising from their business outside of Canada. Canadian holdings of gold and United States dollars, both official and private, had a value at the end of 1939 of \$404,200,000 in terms of United States dollars.

Direct investments, amounting to \$621,000,000, made up almost half of the total Canadian investments abroad. The largest part of these, \$397,000,000, was in the United States and \$139,000,000 was in other foreign countries. Portfolio investments in foreign securities valued at \$719,000,000 were divided between \$511,000,000 of stocks and \$208,000,000 of bonds.

### 3.—Estimated Canadian Investments Abroad, as at Dec. 31, 1939

NOTE.—Excluding investments of insurance companies, banks and government credits. Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies were converted into Canadian dollars at current market values.

## PART II.—NATIONAL ACCOUNTS—CANADA'S NATIONAL INCOME AND EXPENDITURE\*

This Part presents new estimates of the principal national accounts: these supersede the series on national income previously published in the Year Book. National accounts are as broad as the economy itself: they comprise income and expenditure for the entire country, including individuals and private corporations as well as governments and are, therefore, more comprehensive in scope than the public finance statistics of Part III which are limited to the financial transactions of the Dominion, Provincial and Municipal Governments.

In recent years there has been increasing realization that national accounts are essential tools in the formulation of economic policy. Problems involved in the planning of a maximum war effort have emphasized the need of knowledge of the size and structure of the national income; of the relation of net national income to gross national product; of the distribution of national expenditure as between different sectors of the economy, as between consumption and investment, and as between

\* Prepared under the direction of Dr. C. M. Isbister, Chief Economist, Dominion Bureau of Statistics, by the Central Research and Development Staff.

war and non-war; and of the distribution of income payments to individuals by income classes. Planning for full employment and social security in the post-war requires similar information.

The usefulness of comprehensive studies in this field is by no means confined to government alone, for similar needs have been expressed on many sides. With the growing complexity of business problems, data on national accounts will facilitate the study of markets, the structure of costs, the relationship of the firm to industry, and of particular industries to the economy as a whole.

The urgency of these needs has led to the decision to review the concepts on which the Dominion Bureau of Statistics national income series has been based and to institute preparation of a new set of national accounts. As a result of revisions in concepts as well as in method and sources of estimation, the present figures are not comparable with the old series on national income. The new series comprise, in the first instance, gross national product and expenditure at market prices, net national income at factor cost, and income payments to individuals, for the years 1938 to 1945, inclusive. Extensions into other detailed accounts and into past years are being prepared. The revised series have benefited from consultations with United Kingdom and United States estimators, which were held with a view to attaining a greater degree of comparability in national accounts.

**Net National Income at Factor Cost.**—The first step in compiling gross national product is to add up all the incomes earned by factors of production for their contribution to the current production of goods and services. These earnings include salaries and wages received by employees before deduction of personal income tax and employee contributions to social security schemes; supplementary labour income consisting of employer contributions to social security schemes and to private pension funds, non-contributory pensions paid, and board and other allowances to paid employees; military pay and allowances; investment income inclusive of interest, net rent and corporate profits before taxes and depletion allowances; and net income of unincorporated enterprise, which is a mixture of labour income and investment income. Net national income at factor cost (Table 1, item 5) is defined as the sum of these earnings which constitute the remuneration of the factors of production for services rendered in a given year. In several instances the procedure is broadened to include earnings from current operations received "in kind". These include board and other allowances received in kind, valued in general at cost to the employer; the estimated value of food and clothing issues to members of the Armed Forces; certain products retained by sellers for their own consumption, such as food grown and consumed on farms, valued at prices for which they could otherwise have been sold; and imputed rent of owner-occupied homes. Capital profits or losses are excluded as they do not arise from current operations.

Net national income at factor cost is an aggregate which measures the net value of production and the fluctuations in this total from year to year are perhaps the best single indicator of economic conditions. During the War, net national income expanded from \$3,940,000,000 in 1938 to \$9,685,000,000 in 1944, an increase of 146 p.c. The proportionate distribution among the various categories has shown little change if military pay and allowances are regarded as labour income. In 1938 salaries, wages and supplementary labour income were 62 p.c. of national income at factor cost, while investment income represented 18 p.c. and net income of individual enterprise 20 p.c. The proportions in 1944 were as follows: salaries, wages and supplementary labour income 51 p.c., military pay and allowances 11 p.c.,

investment income 18 p.c., net income of individual enterprise 19 p.c. It should be noted, however, that the fact that the relative share of each category has remained about the same provides no information as to the rate of remuneration for various types of productive service because there has been considerable change in the numbers of individuals receiving income under the various categories.

Net national income at factor cost is also useful for analysing the distribution of earnings of factors of production by regions and by industries. Sufficient information is available at present to prepare only distributions of salaries, wages and supplementary labour income and of net income of individual enterprise by provinces for the years 1938 to 1943, inclusive. These appear in Tables 3 and 4, respectively.

**Gross National Product at Market Prices.**—Since net national income at factor cost is a compilation of the amounts earned by factors of production for their services, it excludes certain items of cost which cannot be regarded as the return to any factor of production but which enter into market prices. These are indirect taxes, such as sales and excise taxes, less subsidies paid to producers by governments which permit production costs to run ahead of revenues from sales (Table 1, item 6), and appropriations for depreciation and similar business reserves (Table 1, item 7). To arrive at gross national product at market prices, these items are added to net national income at factor cost.

Gross national product at market prices is thus defined as the value of all final goods and services produced in any year measured through a compilation of all costs involved in production. By final goods and services are meant all consumer goods and services purchased directly by individuals or by governments on behalf of the community, and all goods and services used to increase inventories or to maintain or increase the country's stock of capital equipment. Intermediate goods and services purchased by one business from another and used up in the process of production do not need to be counted specifically as they are automatically included in the value of final goods and services.

Since gross national product covers all productive economic activities that take place in the country, it provides useful information about the development and potentialities of the economy as a whole. The tremendous expansion in production which has taken place as a result of the stimulus of wartime demand is illustrated by the increase of gross national product from \$5,075,000,000 in 1938 to \$11,771,000,000 in 1944—an increase of 132 p.c. It must be noted, however, that this expansion reflects increase in price as well as growth in real production. With existing information it is not possible to judge precisely how much of the increment in gross national product is due to rising prices and how much to growth in the physical volume of production. Some indication can, however, be obtained from the fact that the index of wholesale prices went up 30 p.c. while the index of retail prices increased 22 p.c. and the cost-of-living index 16 p.c.

**Gross National Expenditure at Market Prices.**—Gross national expenditure is defined as the value of all final goods and services produced in any given year measured through a compilation of the sales of these goods and services. Thus it measures the same total as gross national product but in a different way. It is termed "gross" because no deduction is made for replacement of existing capital equipment which is used up through "wear and tear" and obsolescence in the course of production.

If all enterprises were to publish accurate accounts on a uniform basis, the two statistical totals—gross national product and gross national expenditure—would, in fact, be equal. These conditions are not fulfilled in practice. National accounts must summarize transactions of enterprises that do not all keep their accounts on the same basis together with the transactions of households and small concerns that may not keep accounts at all. For these and other reasons, some discrepancy between the two sides is inevitable. With reference to the over-all magnitudes involved, it is interesting to note how close a balance is achieved.

The equality of the two statistical totals may be illustrated by comparing the economic activity of the country with the operations of a number of affiliated companies which buy only from each other, but sell also to the general public and to the Government. If the operating accounts of these companies were all consolidated, inter-company transactions in those goods and services that are charged as operating costs would cancel out. On one side of the consolidated account would appear payments to persons, such as the salaries and wages, interest and rents; payments of indirect taxes to governments; current appropriations for depreciation and other business reserves; and the total net income of the various companies divided into corporate profit taxes, dividends and undistributed profits. On the other side of the account would appear the proceeds of all sales of goods and services to the general public and to the Government and inter-company sales of those goods which have not been charged as operating costs by the purchaser, i.e., capital goods and additions to inventories. It is clear that in this case the two sides would balance, since the consolidated sales total must equal the costs of production including the profits of the companies.

A similar set of accounts can be drawn up for a closed economy, that is, a country which has no international transactions. On the one side of the account would be listed in consolidated form all the costs involved in production comprising earnings arising in production, indirect taxes and appropriations to depreciation and similar business reserves. On the other side would be listed the proceeds of all final sales. The goods and services produced during a period must be disposed of in some way. Either they are purchased by consumers or by the Government, or by firms for replacement, or for expansion of plant or equipment, or they are used for net addition to inventories. In other words the value of all final goods and services produced is measured by personal expenditure on consumer goods and services; government expenditure on all types of goods and services; and investment in capital goods, including houses, and in additions to inventories.

These three classes of expenditure would be sufficient to balance the account for an economy that has no transactions with the outside world. A further adjustment to gross national expenditure is necessary to allow for Canada's international transactions. This adjustment is made by subtracting current imports of goods and services from current exports. If Canadian exports exceed imports it means that a portion of the gross national product is not available for distribution in Canada and the value of this difference must be added to the classes of expenditure listed above. If the balance lies the other way, that is, if imports exceed exports, the expenditure on goods and services in Canada would be greater than the production and must be compensated for by an equivalent deduction in the gross national expenditure. Part of the necessary adjustment is included in Table 2 under the heading of net private investment abroad and part is included under government expenditure; it will be noted that the figures under the heading of net private

investment abroad do not correspond to the net international balance on current account. The divergence is particularly wide during the last few years, since a large portion of wartime exports is included in government expenditure (Table 2, item 1).

Since gross national expenditure is a compilation of all the sales of final goods and services, it shows the way in which the components of gross national product are spent. Analysis of the distribution of national expenditure, as portrayed in Table 2, reveals the tremendous expansion in the share of the country's output absorbed by government expenditure and the extent to which this expansion was based on war requirements. In 1938, all governments purchased only 18 p.c. of the total flow of goods and services. In 1944 expenditures by Dominion, Provincial and Municipal Governments were responsible for 45 p.c. of gross national expenditure while Dominion war expenditures alone covered 39 p.c. As war expenditures decline, the problem is whether effective demand will increase sufficiently in the other sectors, in the form of consumer expenditure, private investment and exports to balance the decline in government expenditures. This is of crucial importance in maintaining full employment. In interpreting these figures it must, however, always be kept in mind that they measure increases in prices as well as growth in the physical volume of goods and services.

**Personal Income Payments.**—The concept of personal income payments (Table 5) is defined as the amount of income actually paid out to individuals in Canada. It is not the same aggregate as net national income at factor cost but it is directly related to it. On the one hand, certain incomes received by individuals are added which do not represent payments for production of goods and services and are, therefore, excluded from net national income at factor cost. These are transfer payments from governments and business to individuals, such as direct and agricultural relief, family allowances, unemployment insurance benefits, benefits from contributory government and industrial pension funds, and interest on the portion of the public debt which was not used to finance real assets. It is assumed that interest paid on the public debt incurred to finance existing real assets represents a payment for current productive services. This portion is, therefore, included in net national income at factor cost. The remainder of the public debt, such as that incurred to finance wars and relief, is treated as a transfer payment.

On the other hand, elements of earnings in the course of production which are not paid out to individuals are deducted. The more important of these are undistributed profits of corporations, corporate income taxes, government trading profits and employer and employee contributions to social security and industrial pension funds.

In 1938, the aggregate of personal income payments amounted to \$3,973,000,000, while in 1944 it was \$8,724,000,000, a rise of 120 p.c. It did not rise as steeply as net national income at factor cost because there was a relatively greater increase in the portion of net national income which was not paid out to individuals than in the portion which was paid out to individuals. Consumer expenditures, taxes levied on personal incomes and personal savings show the way in which personal income payments are disposed of.

## PART III.—DOMINION, PROVINCIAL AND MUNICIPAL FINANCE

## Section 1.—Combined Statistics of Public Finance for All Governments\*

The purpose of this Section is to present combined statistics of public finance for all governments of Canada—Dominion, Provincial and Municipal. While it was possible to publish current statistics of the combined debt of all governments, corresponding information concerning combined revenues and expenditures was not

\* Revised under the direction of J. H. Lowther, Chief, Public Finance Branch, Dominion Bureau of Statistics.

available at the time of publication. Consequently, Table 1 presents the combined debt of all governments as at the governmental fiscal year ends nearest Dec. 31, 1944, while the combined revenues and expenditures presented in Tables 3 and 4, respectively, are for governmental fiscal years ended nearest Dec. 31, 1943.

**Combined Debt.**—The statistics of provincial and municipal debt appear in greater detail in Tables 34 and 41, respectively. The rapid growth of the combined debt during the war period 1940-44, as shown in Table 2, has been due to the fact that large increases in the Dominion debt have overshadowed considerable reductions in provincial and municipal debt. However, it should be noted that the Dominion has been able to finance the War without recourse to the issue of foreign pay bonds, and that the large increase in bonds outstanding represents additions to internal rather than external debt. Largely as a result of the repatriation of sterling issues, the amount of Dominion, direct and guaranteed foreign pay bonds outstanding has declined by more than \$750,000,000 in the period 1940-44. As pointed out on p. 918, the amount of provincial foreign pay bonds declined during the same period by over \$107,000,000.

### 1.—Composition of Total Debt of All Governments in Canada, 1944, with Totals for 1943

NOTE.—These figures are as at the governmental fiscal year ends nearest Dec. 31, 1944.

Item	Dominion	Provincial	Municipal	Total	Deduct Inter-governmental Debt	Combined Governmental Debt

**Combined Revenues and Expenditures.**—Tables 3 and 4 present an over-all picture of Dominion, provincial and municipal finance by combining ordinary and capital account revenues and expenditures for each level of government. Since all expenditure—ordinary or capital—is included, amounts provided for debt retirement have been excluded to avoid duplication. The revenues and expenditures presented in these tables are on a “net” basis since the following revenues have been treated as offsets to their corresponding expenditures: shared-cost contributions of other governments, institutional revenue and certain other sales of commodities and services, and interest revenue exclusive of sinking fund earnings. Certain inter-governmental transfers such as the payments of the Dominion to the provinces for the vacation of tax fields are neither conditional grants nor payments for services and cannot, therefore, be offset against any specific expenditure. These are set out separately in Tables 3 and 4 so as to show grand totals of revenue and expenditure for each level of government as well as totals excluding inter-governmental transfers.

Discrepancies between the amounts shown in Tables 3 and 4 as inter-governmental transfers are due to variations in the fiscal year ends and accounting practices of governments.

## 3.—Combined Revenues of All Governments in Canada, 1943

## Section 2.—Dominion Public Finance\*

A sketch of public finance, from the French regime to the outbreak of the War of 1914-18, appears at pp. 742-743 of the 1941 Year Book, while detailed sketches *re* tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945 is given at pp. 918-923 of the 1945 Year Book.

**The 1945-46 Budget.**—The Budget for the year ended Mar. 31, 1946, was presented to Parliament on Oct. 12, 1945, and the principal tax reductions proposed were:—

- (1) A reduction of 4 p.c. in individual income tax for 1945 and of 16 p.c. for 1946;
- (2) Reduction of the 100 p.c. rates of excess profits tax to 60 p.c. from Jan. 1, 1946;
- (3) Increase in the minimum standard profit under excess profits tax from \$5,000 to \$15,000 as from Jan. 1, 1946;
- (4) Removal of the 8 p.c. sales tax from all machinery and equipment used directly in the process of manufacture or production of goods as from the date of the Budget;
- (5) Complete removal of the war exchange tax as from the date of the Budget.

Various other amendments were proposed, including several to implement the recommendations of the Royal Commission on the Taxation of Annuities and Family Corporations. Several income tax concessions to the mining and oil industries were renewed for another year. It was proposed that the succession duty law be amended to provide alleviation of duty in the case of "quick successions".

**The 1946-47 Budget.**—The Budget for the year ended Mar. 31, 1947, was presented to Parliament on June 27, 1946. The financial accounts for the fiscal year 1945-46 showed expenditures of \$4,691,000,000 and revenues of \$2,955,000,000, leaving a deficit for that year of \$1,736,000,000. It was estimated that, after taking account of the effect of the tax changes outlined below, the deficit for the fiscal year 1946-47 would not exceed \$300,000,000 and that by the following fiscal year, 1947-48, the Budget should be in balance.

The principal features of the tax changes were:—

### *Personal Income Tax.*—

Complete revision of the personal income tax structure involving increase in exemptions from \$660 to \$750 for single persons and from \$1,200 to \$1,500 for married persons; simplification of rate structure into and graduated schedule of rates; revision of allowances for dependents whereby for a child under 16 for whom family allowances are paid taxpayers will be given a deduction of \$100 under the income tax and for any other dependent a deduction of \$300; all the above changes to become effective from Jan. 1, 1947.

### *Corporation Income and Excess Profits Taxes.*—

- (1) The over-all combined flat rate of corporation income tax and excess profits tax was reduced effective Jan. 1, 1947, from 40 p.c. to 30 p.c., by the complete repeal of the flat 22 p.c. rate of excess profits tax and by increasing the corporation income tax rate from 18 p.c. to 30 p.c.
- (2) The rate of excess profits tax applying on profits in excess of 116 $\frac{2}{3}$  p.c. of standard profits was decreased from 20 p.c. to 15 p.c. effective Jan. 1, 1947, and sole proprietors and partnerships were exempt entirely from the excess profits tax.

### *Offer to Provinces.*—

Following the failure to achieve complete agreement among all the provinces at the Conference held in Ottawa in April, 1946, as to the terms for renewal of the Wartime Tax Agreements the Dominion Government made a proposal in the Budget Speech which any Province could accept or reject as it wished. The main features of this proposal were:—

\* Revised under the direction of Dr. W. C. Clark, C.M.G., Deputy Minister, Department of Finance.

- (1) The new agreements would be for a period of five years.
- (2) The Dominion would undertake to make to each agreeing province the payments offered under the Dominion proposal submitted at the April conference; such payments were based on a minimum equal to a per capita grant of \$15 on the greater of the 1941 or 1942 provincial population, with payments in any one year adjusted for increases in population and in gross national production.
- (3) In return for such payments an agreeing province would undertake to impose a 5 p.c. corporation income tax on net profits attributed to business done in the Province; would undertake not to impose any other corporation income taxes (except on the profits of mining and logging companies) and not to impose any personal income taxes.
- (4) In respect of non-agreeing provinces, the Dominion offered to allow a credit against Dominion personal income tax for personal income tax paid to a Province up to 5 p.c. of the Dominion tax.
- (5) In respect of succession duty a proposal was made that would allow any agreeing or non-agreeing Province to stay in this field if it wished. The Dominion rates of succession duty will be doubled, and duty paid to any province on the same estate will be allowed as a credit against the Dominion duty up to one-half the Dominion duty. If an agreeing province elects to retain its succession duties, the amount of such credits allowed against the Dominion duty will be deducted from the annual payment to the province.

#### *Taxation of Co-operatives.—*

The main recommendations of the McDougall Commission on the Taxation of Co-operatives were implemented. The changes proposed were:—

- (1) The section of the Income Tax Act granting exemption to co-operatives to be repealed.
- (2) Patronage dividends paid in cash to be allowed as deductions from taxable income of both co-operatives and ordinary companies subject to the limitation that taxable income be not reduced below an amount equal to 3 p.c. on capital employed less interest paid on borrowed capital.
- (3) Co-operatives and ordinary companies to be required to hold forth prospect prior to beginning of fiscal year that patronage dividends will be paid.
- (4) Bona fide co-operatives commencing business after Dec. 31, 1946, to be exempt from income tax for first three years.

#### *Income Tax Appeal Boards.—*

It was announced in the Budget that two Boards would be established to hear appeals with regard to income tax assessments of the year 1946 and thereafter. The first Board would be in the nature of a court to which a taxpayer could appeal on any question of fact or law and be rendered a decision binding on the income-tax administration and subject to revision only by a higher court. The second Board is to be an Income Tax Advisory Board, to which a taxpayer may request that any matter involving the use of the discretionary power of the Minister of National Revenue to which the taxpayer makes objection be referred for review.

### **Subsection 1.—Balance Sheets of the Dominion**

The composition of the Dominion Balance Sheet was revised in the fiscal year 1943-44. The aim has been to indicate more accurately the character of the asset and liability accounts. The Balance Sheets for the years 1941-45 shown in Table 5 are presented on the basis of the 1943-44 revision. On the asset side, accounts that have been classified as *active* assets are shown; these represent cash or investments that are interest-producing or have a readily realizable cash value. On the liability side, such liabilities as have been ascertained and brought into the accounts are given. No liability is shown for interest accrued but not due, nor for current obligations incurred for supplies or services but not paid for at the end of the fiscal year. Indirect liabilities under guarantees are not reflected in the Balance Sheets, but are set out in a special schedule. (See pp. 911-912.)

The excess of liabilities over active assets, designated the *net debt*, is analysed in a statement appended to the Balance Sheet, and is apportioned to non-active assets, which include capital expenditures and non-productive investments, and to accumulated deficits in Consolidated Deficit Account.

<sup>1</sup> Direct liabilities only. Indirect liabilities or guarantees given by the Dominion of Canada are dealt with in Table 26, p. 912.

## Subsection 2.—Revenues and Expenditures

In the year ended Mar. 31, 1945, both revenues and expenditures showed a slight decrease from the high levels of the previous year. Revenues decreased from 1944 by \$77,683,000 to \$2,687,335,000 (excluding the refundable portion of the income tax and the excess profits tax), accounted for by small decreases in practically all tax revenues: non-tax revenues showed an increase of 9.1 p.c. while special receipts almost doubled. Revenue from direct taxes represented about 60 p.c. of the total tax revenue, as compared with about 35 p.c. in the last pre-war year. Of the total expenditures of \$5,245,612,000, expenditures on the War amounted to \$4,418,446,000, or approximately 84 p.c. Ordinary expenditures, covering the normal operating costs of government, increased by \$136,995,000, owing largely to an increase of \$77,707,000 in debt charges. Expenditures designed to relieve unemployment and agricultural distress, shown in the table under "Special Expenditures" totalled only \$7,506,000, approximately \$30,000,000 less than the amount expended in the previous year. Expenditures under the heading "Government Owned Enterprises" amounted to \$1,358,000. The over-all deficit for the year amounted to \$2,558,277,000 or \$1,000,000 higher than that of the previous year.

## 6.—Details of Revenues, Years Ended Mar. 31, 1941-45

<sup>1</sup> Includes a write-down of assets amounting to \$62,938,239.

on wheat marketing guarantees applicable to fiscal year 1938-39.

<sup>2</sup> Reserve against estimated losses

on wheat marketing guarantees applicable to the fiscal year 1939-40 to the extent of \$27,000,000.

<sup>3</sup> Reserve against estimated losses<sup>4</sup> Includes \$25,000,000 as reserve against possible losses on assets.

## 11.—Per Capita Revenues and Expenditures, Years Ended Mar. 31, 1930-45

NOTE.—The years marked with an asterisk (\*) are Census years; per capita figures for intercensal years are based on estimated populations, see p. 127. See Tables 6-10 for the figures of revenues and expenditures on which this table is based. Figures for the years 1868-1912, inclusive, will be found at p. 849 of the 1938 Year Book; those for 1913-29 at p. 932 of the 1945 edition.

Year	Per Capita				Year	Per Capita			
	Revenue from Taxation	Total Revenue	Ordinary Expenditure	Total Expenditure		Revenue from Taxation	Total Revenue	Ordinary Expenditure	Total Expenditure

### Subsection 3.—Analysis of Revenues from Taxation

Table 13 gives a picture of the proportions of total expenditures that have been met by taxation and from all sources of revenue for each of the fiscal years ended Mar. 31, since 1936. Prior to the War of 1939-45, and as Canada was pulling away from the depression of the early 'thirties, the record shows a substantial improvement and in 1938, 96.7 p.c. of all expenditures was being met from all revenue and almost 84 p.c. from taxation revenue. Subsequently, as was to be expected, the reverse was the case. The high level of the percentage figures for 1942 was the result of the early imposition of high taxation levels and the fact that at this time war expenditures were still relatively low.

As shown in Table 8, the revenues from customs and excise duties, the two most important sources prior to the War of 1914-18, now amount to only about 12 p.c. of the revenue derived from taxation; revenue from income tax forms almost 45 p.c. of the tax revenue.

The following analyses of taxation revenues are confined to excise duties, excise taxes and income tax revenue; customs receipts constitute a single item in the "Public Accounts" and cannot be further analysed here.

#### Excise Duties

Excise duties proper are presented here together with a summary of the excise tariff and statistics arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of excisable goods taken out of bond.

**Canadian Excise Tariff.**—The following is a statement of the Canadian excise tariff, as existing at Apr. 1, 1945:—

1. Spirits distilled in Canada, per proof gal. . . \$11.00	3. Beer or Malt Liquor:—
Canadian brandy, per proof gal. . . . . \$ 9.00	Brewed in whole or part from any substance other than malt, per gal. . . . \$ 0.45
Except Spirits as follows:—	4. Malt:—
(a) Used in a bonded manufactory for medicines, extracts, etc., per proof gal. . . . . \$ 1.50	(a) Produced in Canada and screened, per lb. . . . . \$ 0.16
(b) Used in a bonded manufactory for perfumes, per proof gal. . . . . \$ 1.50	(b) Imported, per lb. . . . . \$ 0.16
(c) Used in a bonded manufactory for vinegar, per proof gal. . . . . \$ 0.60	5. Malt Syrup:—
(d) Used for chemical compositions approved by Governor in Council, per proof gal. . . . . \$ 0.15	(a) Produced in Canada, per lb. . . . . \$ 0.24
(e) Sold to licensed druggists for pharmaceutical preparations, per proof gal. . . . . \$ 1.50	(b) Imported, per lb. . . . . \$ 0.40
(f) Distilled from native fruits and used by a licensed wine manufacturer for fortification of native wines, per proof gal. . . . . \$ 1.50	6. Tobacco, Cigars and Cigarettes:—
2. Spirits imported (in addition to any of the duties otherwise imposed), per proof gal. . . . . \$ 0.30	(a) Manufactured tobacco, per lb. . . . . \$ 0.35
	(b) Cigarettes weighing not more than 2½ lb. per M, per M. . . . . \$ 6.00
	(c) Cigarettes, weighing more than 2½ lb. per M, per M. . . . . \$11.00
	(d) Cigars, per M. . . . . \$ 3.00
	(e) Canadian raw leaf tobacco, when sold for consumption, per lb. . . . . \$ 0.20

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to any bona fide public hospital for medicinal purposes only.

**Revenues from Excise Duties.**—In the year ended Mar. 31, 1945, tobacco, including cigarettes, supplied about 52 p.c. of the revenue from excise duties.

#### 14.—Gross Excise Duties Collected, Years Ended Mar. 31, 1940-45

(As shown in the Report of the Commissioner of Excise)

Item	1940	1941	1942	1943	1944	1945
	\$	\$	\$	\$	\$	\$
Spirits.....	12,478,114	17,685,951	21,994,307	31,612,277	30,908,236	31,576,777

Malt.....	11,402,151	16,801,740	25,241,291	33,952,236	35,080,381	35,121,290
Tobacco (incl. cigarettes)...	40,132,994	54,893,927	64,452,468	75,757,280	79,315,378	82,538,590
Cigars.....	423,940	522,875	597,488	614,444	590,310	603,483
Licences.....	34,629	45,137	39,336	38,270	36,626	36,705
<b>Totals <sup>1</sup>.....</b>	<b>65,250,555</b>	<b>91,057,093</b>	<b>113,258,214</b>	<b>143,140,155</b>	<b>146,966,395</b>	<b>157,857,270</b>

<sup>1</sup> These totals do not agree with net excise duties as shown in Table 6, due to refunds, drawbacks and, in the case of spirits, a transfer tax being included here.

**Statistics of Licences and Distillation.**—As a by-product of the collection of excise duties, statistics are compiled of excise licences issued and of distillation.

#### 15.—Statistics of Licences and Distillation, Years Ended Mar. 31, 1940-45

Wine and other materials "	436,616	2,695,501	366,290	13,015,476	49,473,944	78,951,564
Proof spirits manufactured.....proof gal.	11,821,317	14,641,842	17,569,476	19,657,698	27,203,337	35,555,059

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from the low of 2,356,329 proof gal. in that year to the high of 35,555,059 proof gal. recorded in 1945.

**Alcohol and Tobacco Taken Out of Bond.**—Record amounts of cigarettes and malt liquor were taken out of bond for consumption in 1945, while the amount of tobacco was slightly below 1944. The quantities of spirits, malt and cigars taken out of bond were higher than in 1944 but less than the 1943 peak.

### 16.—Spirits, Malt Liquor, Malt and Tobacco Taken Out of Bond for Consumption, Years Ended Mar. 31, 1930-45

NOTE.—For years prior to 1900, see 1916-17 Year Book, p. 528; for 1901-10, see 1933 Year Book, p. 840; for 1911-21, the 1938 Year Book, p. 855; and 1922-29, the 1945 edition, p. 936.

<sup>1</sup> Figures include snuff.

### Excise Taxes

The statistics given in Table 17 represent gross collections by the Excise Division of the Department of National Revenue; they differ from the figures shown in Table 8 (in the column "Sales and Other Excise Taxes"), which represent net revenues received, by the amounts of the refunds shown in footnote 3 to Table 17.

### 17.—Excise War Taxes Collected, by Commodities and Provinces, Years Ended Mar. 31, 1940-45

(Accrued Revenue)

NOTE.—Dashes in this table indicate that there was no tax imposed on the corresponding item in the years so indicated.

<sup>1</sup> New tax imposed on cigarettes and tobacco.

<sup>2</sup> Increase due largely to use of excise stamps in

paying taxes on places of entertainment. <sup>3</sup> Includes refunds of \$3,675,115 in 1940, \$4,834,909 in 1941, \$10,369,721 in 1942, \$17,549,001 in 1943, \$34,342,147 in 1944 and \$194,718,627 in 1945.

## Income Tax

The income tax revenue shown in Table 18 represents collections made by the Taxation Division of the Department of National Revenue under the authority of the Income War Tax Act (c. 97, R.S.C. 1927). The Act covers more than income tax proper, as corporation taxes are coming to be regarded in a different light to those on the income of individuals. Income tax on individuals and on corporations is treated separately in Part III of this Chapter, at pp. 930-937

The tax on dividends and interest (Sect. 9B of the Act) is levied at the rate of 5 p.c. on interest paid by Canadian debtors (except provinces and municipal or public bodies) in a currency which is at a premium in excess of 5 p.c. over Canadian funds and at the rate of 15 p.c. on dividends received by persons who are non-residents of Canada and on interest received from or credited by Canadian debtors to non-residents, except in the case of Dominion or Dominion-guaranteed bonds and also on interest received by a non-resident parent company from a Canadian subsidiary except where an agreement had been entered into prior to Apr. 1, 1933, for the payment of such interest in a currency other than Canadian. The tax also includes fees for copyrights and rights for the use of films, phonograph records and similar

devices. The tax on rents and royalties (Sect. 27) is imposed at the rate of 15 p.c. on non-residents in respect of the gross amount of all rents, royalties, etc., for the use in Canada of real or personal property, patents or for anything used or sold in Canada. The gift tax (Sect. 88) is imposed at the rate of 10 p.c. on gifts up to \$5,000 and at rates varying from 11 p.c. to 28 p.c. on gifts from \$5,000 to \$1,000,000 or over.

The national defence tax was imposed in 1940 at the rate of 2 p.c. on the incomes of single persons earning over \$600 and at the rate of 3 p.c. on those earning over \$1,200. In the case of married persons the tax was 2 p.c. on incomes over \$1,200. In 1941 the rates were raised to 5 p.c. and 7 p.c., the exemption limit for single persons being raised to \$660. This tax was consolidated with the individual income tax in the 1942 Budget.

<sup>1</sup> These figures include the estimated refundable portion and therefore do not agree with the totals given in Table 17. <sup>2</sup> Includes national defence tax amounting to \$27,672,018. <sup>3</sup> Includes national defence tax amounting to \$106,636,747. <sup>4</sup> Includes 1942 deferred tax amounting to \$2,317,733.

<sup>5</sup> Includes 1942 deferred tax amounting to \$3,326,161. <sup>6</sup> Includes 1942 deferred tax amounting to \$1,308,982.

### Subsection 4.—Subsidies and Loans to Provinces

**Subsidies.**—By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Dominion makes certain annual payments to the provinces: these are summarized as follows.

*Interest on Debt Allowances.*—By the terms of the union of the provinces at Confederation in 1867, the Dominion assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except in the case of Ontario and Quebec, interest at 5 p.c. on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately \$25 per capita. On the subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Confederation indebtedness. From time to time, adjustments have been made in the basis of calculating the debt allowances of the provinces; moreover, the Dominion pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted. The aggregate annual payment by the Dominion to the provinces in respect of interest on debt allowances is \$1,609,386.

*Allowances for Governments and Legislatures.*—Under the terms of the union, annual specific grants were made to the various provinces for the support of their governments and legislatures. These fixed amounts vary with the population of the provinces, according to the following scale, approved in 1907:—

Where population is—	\$
Under 150,000.....	100,000
150,000, but does not exceed 200,000.....	150,000
200,000, " " 400,000.....	180,000
400,000, " " 800,000.....	190,000
800,000 " " 1,500,000.....	220,000
Over 1,500,000.....	240,000

Aggregate annual allowances presently paid under this head amount to \$1,750,000.

*Allowances per Head of Population.*—Under the British North America Act of 1867, a grant of 80 cents per head of population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per head up to a population of 2,500,000, and at the rate of 60 cents per head for so much of the population as exceeded that number. Such allowances paid to the provinces in the fiscal year 1944 amounted to \$8,779,089.

*Special Grants.*—In the case of certain of the provinces, grants have been added to the original scale of subsidies in view of special circumstances obtaining, which, for the fiscal year 1944, amounted in the aggregate to \$2,280,880 as set forth below:—

*Prince Edward Island.*—A special grant of \$195,000 less a deduction of \$39,120 (net grant of \$155,880).

*New Brunswick.*—An annual grant of \$150,000 since 1875 in consideration of the repeal of lumber duties reserved to the Province by the B.N.A. Act of 1867.

*Manitoba.*—A special grant on the basis of population amounting at present to \$562,500 per annum.

*Saskatchewan and Alberta.*—An annual sum as compensation for loss of public lands revenue, based on their respective populations and amounting at present to \$750,000 for Saskatchewan and \$562,500 for Alberta.

*British Columbia.*—A special grant amounting at present to \$100,000 per annum.

## 19.—Subsidy Allowances to Provincial Governments, Years Ended Mar. 31, 1940-45

<b>Totals.....</b>	<b>80,033,333</b>	<b>378,885,117</b>	<b>99,680,196</b>	<b>73,639,211</b>	<b>632,237,857</b>

<sup>1</sup> See text at p. 899.

<sup>2</sup> Allowances in lieu of debt.

<sup>3</sup> Does not include "Additional Special Grants" (see text following).

*Additional Special Grants.*—In addition to the above, there were other special grants paid to the Maritime Provinces, Manitoba, Saskatchewan and British Columbia up to 1941 that were voted annually, aggregating, in the fiscal year 1941, \$5,475,000 as follows:—

	\$
Prince Edward Island.....	275,000
Nova Scotia.....	1,300,600
New Brunswick.....	900,000
Manitoba.....	750,000
Saskatchewan.....	1,500,000
British Columbia.....	750,000

These additional special grants were suspended with the coming into force of the Dominion-Provincial Taxation Agreements.

*Dominion-Provincial Taxation Agreements.*—The Dominion-Provincial Taxation Agreement Act, 1942, was the result of agreements between the Dominion and the individual provinces whereby the latter agreed to vacate the income and corporation tax fields in favour of the Dominion for the duration of the War and a limited period thereafter and the Dominion agreed to compensate the provinces therefor. Two alternative methods of compensation were proposed and these are outlined at p. 748 of the 1942 Year Book.

Under the agreements, the provinces have undertaken generally, subject to certain minor exceptions, that they and their municipalities will not tax personal or corporation incomes earned after Dec. 31, 1940, or collect any other corporation

taxes (with certain exceptions) becoming due and payable after Sept. 1, 1941. The agreements will continue in force for varying periods depending upon the completion of each provincial fiscal year after September, 1945. Any province upon thirty days' prior written notice may terminate its agreement with the Dominion on the last day of the province's fiscal year.

Annual payments to British Columbia, Alberta, Manitoba, Ontario and Quebec are at present based upon the revenues which the provinces and their municipalities obtained from the personal income tax and corporation tax fields during the fiscal year ended nearest to Dec. 31, 1940. Annual payments to Nova Scotia, New Brunswick, Prince Edward Island and Saskatchewan are based on the net cost of servicing the provincial debt in the fiscal year ended nearest to Dec. 31, 1940 (not including contributions to sinking funds), less the revenues obtained by the province from succession duties in the said year. The agreements further provide for the payment of additional subsidies as follows: Prince Edward Island, \$473,174; New Brunswick, \$371,493; Manitoba, \$600,000; Saskatchewan, \$1,500,000; Nova Scotia, \$325,769; a total of \$3,234,437.

The total amounts of the above-described annual payments to the provinces provided for under the Act are shown in Table 21. It is provided, however, that in any year there are to be deducted from such payments any net collections (after refunds to taxpayers and certain collection charges) made by the provinces on account of the taxes renounced in favour of the Dominion. The agreements limit the aggregate amounts that may be so deducted. In each case an amount equivalent to the deductions so made is to be paid to the province within thirty days after the termination of its agreement with the Dominion.

In addition, the agreements provide that the Dominion shall pay, with respect to each year of the agreements to each province, the amount by which the net receipts from gasoline taxes for said year are less than the amount received from this source in the fiscal year ended nearest to Dec. 31, 1940.\* The Dominion also guarantees provincial revenues from the sale of alcoholic beverages at the levels of the basic period, June 30, 1941-June 30, 1942.

Table 21 shows the amount of the annual payments to the provinces as compensation for their vacation of the income and corporation tax fields and also the gasoline tax revenues of the provinces in their respective fiscal years ended nearest to Dec. 31, 1940.

\* Provincial Government receipts from gasoline taxes for the fiscal years 1930-44 are given at p. 938.

**21.—Compensation to Provinces in Lieu of Income and Corporation Tax Revenue and Basis of Guarantees re Provincial Gasoline Taxes**

Province	Annual Payment in Lieu of Income and Corporation Tax	Guarantee of Revenue from Gasoline Taxes, 1940 <sup>1</sup>

<sup>1</sup> Provincial fiscal years ended nearest to Dec. 31, 1940.

**Loans to Provinces.**—All of the provincial loans recently advanced by the Dominion have been made to the western provinces under the authority of relief legislation beginning with the Unemployment and Farm Relief Act, 1931, and these have been secured by interest-bearing treasury bills of the respective provinces, the rate being 3 p.c. since July 1, 1936. The sum total of such loans outstanding as at Mar. 31, 1945, was \$176,152,411 less write-offs of \$19,861,035, making net loans outstanding \$156,291,376, divided by provinces as follows: Alberta \$25,887,500; British Columbia \$34,467,140; Manitoba \$24,774,950; Saskatchewan \$71,161,786. Details are given in Table 19, p. 830 of the 1943-44 Year Book.

Housing loans made to the provinces in the years following the War of 1914-18<sup>7</sup> on the authority of Orders in Council passed in 1918 and 1919, and of the Appropriation Acts of 1920 and 1921, were completely paid off in the fiscal year 1943-44. The provinces repaid the whole of the advances in the following years: Ontario in 1928, Quebec in 1937, New Brunswick in 1938, Manitoba and British Columbia in 1941, Prince Edward Island in 1943 and Nova Scotia in 1944. For statistics, see Table 20, p. 831 of the 1943-44 Year Book.

### Subsection 5.—National Debt

The gross national debt of Canada on Mar. 31, 1914, was \$544,391,369, as against assets of \$208,394,519, leaving a net debt of \$335,996,850. This was a comparatively small debt; it was incurred almost altogether either for public works of general utility which, like the Intercolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets, of the nation, or was expended as subsidies to enterprises which, like the Canadian Pacific Railway, though not government-owned, assisted greatly in extending the area of settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, it was a debt incurred for productive purposes. Also, it was mainly held outside the country, the principal of the Dominion funded debt payable in London, England, being \$302,842,485 on Mar. 31, 1914, as against only \$717,453 payable in Canada.

From 1914 to 1920, the gross debt increased by almost \$1,200,000,000 to a total of \$3,042,000,000 due to heavy war and post-war expenditures, and while there was a slight reduction to a low point of \$2,544,000,000 at Mar. 31, 1930, additional expenditures during the depression years resulted in a gross debt of \$3,710,000,000 by Mar. 31, 1939.

From 1939 to 1945 there was an increase of \$12,000,000,000, incurred mainly for war purposes, bringing the total gross debt to \$15,712,000,000 at the end of March, 1945. After deduction of active assets held by the Government, the net debt showed an increase of \$8,146,000,000 during the war years, amounting to \$11,298,000,000 at the end of March, 1945.

The portion of the funded debt payable in foreign currencies has steadily and sharply decreased during the war years, 1939-45, as was inevitable under conditions where almost the entire amount of Canada's war financing was carried out through domestic operations. Of the total funded debt and treasury bills outstanding as at Mar. 31, 1945, amounting to \$13,984,000,000, less than 2.5 p.c. was payable outside of Canada, representing \$12,000,000 payable in London and \$333,000,000 in New York.

## 22.—Summary of the Public Debt of Canada and Interest Payments Thereon, Years Ended Mar. 31, 1914-45

NOTE.—Statistics for the years 1867-99 are given at pp. 775-776 of the 1942 Year Book; those for 1900-13 at p. 944 of the 1945 edition.

<sup>1</sup> Based on the official estimates of population given at p. 127.

<sup>2</sup> Includes non-active assets.

<sup>3</sup> This amount represents return on investments, which includes interest on investments, profits of Bank of Canada and Central Mortgage Bank and other items.

**Funded Debt Operations.**—Conversions and other national debt operations carried out between 1914 and 1930 are dealt with at pp. 842-843 of the 1933 Year Book; those between 1931 and 1934 at pp. 905-907 of the 1934-35 Year Book; those of the fiscal years 1936 to 1943 in the respective Year Books for those years.

**War Savings Certificates, etc.**—In addition to the Victory Loans proper, it will be observed that other Dominion loan flotations, such as War Savings and Non-Interest Bearing Certificates, are included at the end of Table 23. The Dominion initiated the sale of War Savings Certificates in May, 1940. These Certificates are sold at a discount and, if held to maturity, are equivalent to a yield of 3 p.c. compounded semi-annually. In July, 1940, the Government, in response to many public requests, authorized the issue of Non-Interest Bearing Certificates. These Certi-

ificates are dated the 15th of the month in which payment is received and mature June 15, 1947, the registered holder having the option to redeem his Certificates at par at any time after six months from the date of issue.

*Repatriation of Canadian Securities.*—In addition to providing funds for war and general purposes, it was necessary, during the early years of the War, to furnish funds for the repatriation of sterling issues held in the United Kingdom. These repatriation operations had the ultimate effect of making available Canadian dollars to the United Kingdom for the purchase of Canadian primary commodities and manufactured products required for the prosecution of the War. An account of operations of this nature in the period April, 1940, to October, 1941, is given at pp. 777-778 of the 1942 Year Book.

*Treasury Bills.*—During the past decade a market for short-term treasury bills that has proven highly satisfactory has been built up in Canada. Each issue, with two exceptions (where the bills were sold direct to the Bank of Canada), has been offered for public tender. Lists of treasury bills sold by public tender for the fiscal years 1934-35 to 1941-42 appear in the respective Year Books beginning with the 1937 edition. Details of the issue in continuation of the list published at p. 778 of the 1942 Year Book may be obtained on request.

### 23.—Funded Debt and Treasury Bills of the Dominion, as at Mar. 31, 1945

NOTE.—Certain qualifications as to redemption prior to maturity govern most of these issues; they are explained fully in the "Public Accounts".

# YIELDS OF DOMINION GOVERNMENT BONDS 1940-1946

AND

## TREASURY BILLS 1935-1946

PER CENT

**The Interest-Bearing Debt of Canada.**—Despite the fact that since the outbreak of war in 1939 the interest-bearing debt of the Dominion Government has risen to the unprecedented level of \$14,442,000,000, the average interest rate on this debt has continued to decline throughout the war period and the rate of 2.547 p.c. at Mar. 31, 1945, was the lowest for over three decades. This is in contrast with the experience of the War of 1914-18 when the average interest rate on the direct debt of the nation rose from 3.368 p.c. at Mar. 31, 1913, to a high point of 5.164 p.c. at Mar. 31, 1922.

During the last fiscal year before the outbreak of war, interest on the public debt absorbed about 25 p.c. of total government receipts. With the growth of expenditure on the War, however, interest on the debt has come to absorb a smaller portion of revenues, and in the fiscal year 1944-45 represented 11.87 p.c. of total receipts.

<sup>3</sup> Includes refundable portion of income tax and excess profits tax.

<sup>2</sup> In 1936 an amount of  
<sup>3</sup> Includes refundable

**Guaranteed Debt of the Dominion.**—Besides the direct debt of the Dominion, already dealt with, there are also large indirect obligations, arising mainly out of the guarantee of securities, by the Dominion, of the railway lines that now form the Canadian National Railways, and the subsequent extensions thereof. Together with these are other smaller indirect obligations, originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of its Harbour Commissions, issued in the main for harbour improvements. Since 1932 guarantees of certain bank loans have been made under the various Relief Acts. With the commencement of business of the Bank of Canada on Mar. 11, 1935, the guarantee [authorized by Sect. 27 (6) of the Bank of Canada Act] of the deposit required to be maintained in the Bank of Canada by every chartered bank, came into force. This guarantee will require to be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities, and if the Bank suspends payment of any of its liabilities".

For full details of other guarantees also outstanding at Mar. 31, 1945, see Schedule "V" to the "Public Accounts" for 1945.

**26.—Guaranteed Debt of the Dominion Government (Amounts Held by the Public), as at Mar. 31, 1924-45**

NOTE.—Dashes in this table indicate that there were no guarantees of the type shown for the corresponding years. Figures for the years 1914-23 are given at p. 837 of the 1943-44 Year Book.

<sup>2</sup> Unstated advances *re* wheat marketing are not included.

<sup>3</sup> The main item in this category is the guarantee of bank advances to the Canadian Wheat Board. Does not include indeterminate amounts and amounts not yet determined.

### Section 3.—Provincial Public Finance\*

#### Subsection 1.—Provincial Revenues and Expenditures

On the whole the war period has been one of unprecedented prosperity for the provinces. In the five years 1940-44† provincial net ordinary and capital revenues increased by almost \$114,000,000 to a record high of \$375,137,000. During both 1942 and 1943 the net revenue of every province exceeded the total of its ordinary and capital expenditure and provincial over-all surpluses for these two years aggregated more than \$100,000,000. Again in 1944, net revenues exceeded total expenditures by over \$25,000,000 although over-all surpluses were not shown in three of the provinces. These large over-all surpluses are only partly the result of greatly increased revenues. While capital expenditures had been substantially reduced by 1943, they increased in 1944 over the preceding year by about \$10,000,000. The high employment of the war period has brought about a decline of more than \$30,000,000 in the cost of direct relief. The improvement of provincial finances is reflected in the fact that gross direct liabilities declined by \$84,960,000 (4 p.c.) between 1940 and 1944.

Approximately 71 p.c. of the revenue increase since 1939 occurred in the first two years of the war period—1940 and 1941. Initially, the quickened tempo of economic activity, coupled with the imposition of a few new or more severe taxes,‡ expanded provincial revenues. Following this, the Dominion-Provincial Taxation Agreement Act, 1942, and more recently the Dominion guarantee of provincial profits from the sale of alcoholic beverages,§ stabilized a large part of provincial revenues at these higher levels. Under the provisions of the Dominion-Provincial Taxation Agreement Act each province agreed to discontinue the use of income and corporation taxes for the duration of the War and for a certain readjustment period thereafter, in return for a Dominion subsidy based on either (a) the cash collected on account of these levies in the fiscal year ended nearest Dec. 31, 1940, or (b) the cost of the province's net debt service, less succession duties collected, for the same period. As a result of these Agreements, and the guarantee of provincial revenue from gasoline taxation by a further provision of the same Act, the Dominion has become the major source of provincial revenue—a fact well illustrated by the shift in provincial revenue sources shown in Table 28.

There was no major change in the provincial revenue structure during the provincial fiscal years ended nearest to Dec. 31, 1944. The revenue from liquor control, which is second in importance to the tax agreement subsidies, increased by 8.4 p.c. to a new high of \$70,426,000, over double the 1939 yield: increases were recorded in every province. Saskatchewan's education tax produced increased

\* Revised under the direction of J. H. Lowther, Chief of the Public Finance Statistics Branch, Dominion Bureau of Statistics. Further statistical details are given in the report "Financial Statistics of Provincial Governments in Canada", Dominion Bureau of Statistics.

† References are to provincial fiscal years ended nearest Dec. 31 of year stated.

‡ The most productive of these were the Quebec retail sales tax imposed in 1940 and the additional 2 p.c. levy on corporation profits imposed by Ontario following the 1939 Budget Speech.

§ Budget Speech of Mar. 2, 1943.

revenue in 1944 and again exceeded the total expenditures for education of that Province.

The decline of \$2,845,000 (4.6 p.c.) in net debt charges during 1944, from the 1943 figure of \$62,018,000, reflected an improvement in provincial finances. This reversal of a rising long-term trend was due, for the most part, to debt retirement and a reduction in the average rate of interest paid. Increased expenditures for education and public welfare were quite general and accounted for almost all the rise in provincial expenditure in 1944. Educational expenditure declined only in Prince Edward Island and welfare expenditure declined in Ontario and Manitoba. The marked increase of \$2,938,000 (18.9 p.c.) in the cost of old age pensions and pensions for the blind was due much more to the fact that pensions were increased to offset the rise in the cost of living than to an increase in the number of pensions paid.

**Ordinary and Capital Revenues and Expenditures.**—Tables 27, 28 and 29 present an over-all picture of provincial finance by combining ordinary and capital account revenues and expenditures. These tables provide a more valid basis for comparison than those based on ordinary account alone because they eliminate inter-provincial and inter-year incomparabilities that arise through variations from province to province, and from year to year, in the type of expenditure capitalized. Since all expenditures, ordinary or capital, are included in the combined picture, amounts provided through ordinary account for debt retirement have been excluded to avoid duplication. Sinking fund earnings are not included as revenue. These tables present the "net" cost of services to the provinces after the following revenues have been offset against the corresponding expenditures: shared cost contributions of other governments, institutional revenue and certain other sales of commodities and services, and interest revenue exclusive of sinking fund earnings.

<sup>1</sup> Exclusive of debt retirement.<sup>2</sup> Preliminary figures.

Table 30 indicates the great growth in provincial revenues and expenditures since 1871. While these figures provide an interesting historical series, their limitations as a basis for valid interprovincial or inter-year comparisons have been pointed out in discussing the over-all picture presented in Tables 27, 28 and 29.

### 30.—Gross Ordinary Revenues and Expenditures of the Provincial Governments for Their Respective Fiscal Years Ended in the Census Years 1871-1931 and in Each Year from 1932-44.

NOTE.—For provincial ordinary revenues and expenditures in all other provincial fiscal years since Confederation, see the 1932 Year Book, pp. 734-736. Figures for intervening years between 1916 and 1931 are given at p. 875 of the 1938 Year Book. For dates on which the fiscal years of the provinces end, see Table 33, p. 919.

<sup>1</sup> Includes expenditure on capital account, which is not separable. <sup>2</sup> Nine months. <sup>3</sup> Fourteen months. <sup>4</sup> To facilitate interprovincial comparisons, the ordinary revenues and expenditures as shown in the various Public Accounts have been placed on a gross basis and certain adjustments made. For reconciliation with various Public Accounts see "Financial Statistics of Provincial Governments in Canada for 1940" and subsequent years. Statistics for the years shown below rule are for fiscal years ended nearest Dec. 31 of year stated. <sup>5</sup> Fifteen months. <sup>6</sup> Exclusive of interest paid by Hydro and other commissions. <sup>7</sup> Five months. <sup>8</sup> Excludes \$7,136,000 in 1941, \$1,510,000 in 1943 and \$16,878,000 in 1944 implementing guarantees re Municipalities Seed Grain and Supply Act, 1937. <sup>9</sup> Preliminary figures. <sup>10</sup> Six months.

**Subsection 2.—Provincial Debt**

**Bonded Debt.**—As at the provincial fiscal year ends nearest Dec. 31, 1944, almost 83 p.c. of gross direct liabilities was represented by bonded debt. Gross provincial bonded indebtedness which totalled \$218,870,000 in 1916, increased steadily until 1940 when it reached a peak of \$1,734,000. While it has since declined each year to \$1,678,000 at the close of fiscal years ended nearest to Dec. 31, 1944, a total reduction of over \$56,000,000, this reduction was not common to all provinces. Some provinces have shown increases for certain years while others reflect a net increase for the four-year period. Table 31 indicates the trend in bonded indebtedness during the war period and shows also the general decline in the average coupon rate and changes in the term of issue.

### 31.—Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments, 1940-44

NOTE.—Figures are as at provincial fiscal year ends nearest Dec. 31 of the year stated. Figures for years 1916-30 are given at p. 877 of the 1938 Year Book; for the years 1931-39 at p. 787 of the 1942 edition.

There has been a significant reduction in the amount of provincial foreign pay bonds as illustrated by the fact that provincial bonds, payable in Canada only, have increased by approximately \$51,600,000 during the period 1940-44 although there has been a concurrent decrease of over \$56,000,000 in gross bonded indebtedness.

## Section 4.—Municipal Finance\*

## Subsection 1.—The Organization and Growth of the Municipalities in Canada

Under the provisions of the British North America Act, the several provinces have jurisdiction and control over their respective organizations of municipal government. While the main types of municipalities are common to most provinces there is little or no similarity from the standpoint of prerequisites to incorporation, either as to area or population. In fact, some provinces have no specified requirements in this regard. There are, nevertheless, two main divisions into which incorporated municipalities may be grouped—urban and rural—each of which displays more or less distinct characteristics. The former comprises the cities, towns and villages. The official designation of the municipalities in the rural group, however, varies widely as between provinces: Townships in Ontario; Districts in British Columbia; Municipal Districts in Alberta; Counties in New Brunswick; Municipalities in Nova Scotia; Parishes and Townships in Quebec; and Rural Municipalities in Manitoba and Saskatchewan.

In 1944 there were 3,954 incorporated municipalities in Canada, as compared with 3,996 in 1943. This reduction is accounted for principally by amalgamations in Alberta in the course of establishing "larger municipal units". Some of the other provinces are also considering this plan as a means towards the development

\* Revised under the direction of J. H. Lowther, Chief of the Public Finance Statistics Branch, Dominion Bureau of Statistics. For a list of publications, see Chapter XXXII, Section 1, under "Finance".

of more financially and economically sound units of self-government. The number of each different class or type of municipality, by provinces, for 1944 is shown in Table 35.

It should be noted that the counties in Ontario and Quebec, which are incorporated municipalities, are comprised of local towns or villages and rural municipalities situated therein, which provide the necessary funds for the services falling within the scope of county administration. There are also 'counties' in the Provinces of Nova Scotia and New Brunswick, but these are basically the same as rural municipalities in the other provinces. In Saskatchewan and Alberta, there are areas very similar to rural municipalities except that they enjoy a lesser degree of local services and are not self-governing. These are called "Improvement Districts". The Provincial Governments administer the services provided in these areas and also levy and collect the necessary taxes.

### 35.—Municipalities in Canada, Classified by Provinces, 1944, with Totals for 1941-43

<sup>1</sup> Includes 5 units of self-government officially known as "suburban municipalities".

On the basis of the 1941 Census, over 10,689,000 or 93 p.c. of the population of the nine provinces was in incorporated municipalities. Table 36, showing the comparable situation for each province, gives an indication of the development of self-government from the standpoint of the local population. The 800,000 persons excluded from the population in incorporated municipalities on this basis are comprised of those on Indian Reserves and in areas that have not yet reached the stage of development where self-government is felt necessary or desirable.

### 36.—Population of Incorporated Municipalities, by Provinces, 1941

### Subsection 2.—Municipal Assessed Valuations

The revenue resources of municipalities are limited generally to direct taxation, based on assessed valuations of real and other types of property. In 1944 the total taxable assessed valuations on which taxes were levied was \$7,963,405,203 of which approximately \$5,193,918,239 or 65.2 p.c. was real property. The assessment of personal property has had its ups and downs particularly in the Prairie Provinces. The Maritime Provinces, Manitoba and Alberta are the only provinces at the present time in which municipalities assess and tax personal property. In Alberta only a few municipal authorities still retain this basis for tax revenue while in Manitoba it is used generally by all classes of municipalities except cities. Aside from real property, the next important type of valuation for taxation purposes is business assessment, although not all provinces assess for business purposes separately and distinctly from real property valuations. A variation of methods, schedules and rates exists not only between provinces but also between municipalities within the same province. Some municipalities use the rental basis, others the value of floor space occupied and still others the capital value of the premises occupied. Most of the provinces have other miscellaneous types of assessment, the general nature of which will be noted from the footnotes to Table 37. It will also be noted that income assessment, which formerly was employed in Nova Scotia and New Brunswick only, practically disappeared in 1942. This is a result of the operation of the Dominion-Provincial Tax Agreements whereby the provinces and municipalities abandoned the income-tax field for the duration of the War and a limited period thereafter, so as to leave it open to the Federal Treasury (see p. 913).

It should be noted that the figures in Table 37 are not entirely comparable, on an interprovincial basis, from the standpoint of relative values of properties taxable for municipal purposes. Each province operates under its own assessment laws which are not all similar, either in application or in effect. For instance, in British Columbia cities and municipal districts improvements cannot be taxed on a value in excess of 75 p.c. of taxable values or in excess of 50 p.c. of taxable values in villages; the values actually taxed in 1944 ranged from *nil* to 70 p.c. In the majority of cases, improvements were assessed for tax purposes at 50 p.c. of taxable values, but for all municipalities the total improvements actually taxed represented approximately 44.3 p.c. of total taxable values. It should also be noted that Table 37 does not include assessed valuations in Improvement Districts for either Saskatchewan or Alberta. In Saskatchewan these amounted to \$30,370,599, \$30,390,068, \$29,998,740, \$28,598,170, and in Alberta to \$73,192,965, \$69,829,495, \$69,222,473, \$59,607,462, in 1941, 1942, 1943 and 1944, respectively. In addition there are other intra-provincial inconsistencies between municipalities which, in turn, further affect interprovincial comparisons. These may be said to be due to the lack of integrated municipal assessment systems and uniform standards for establishing values on a province-wide basis, under the direction and control of a central authority. Some provinces, however, have made considerable progress along these lines in recent years, as in the case of Saskatchewan, the results of which are referred to in the text following Table 37.

## 37.—Municipal Assessed Valuations, by Provinces, 1941-44

<sup>1</sup> Includes the following: N.S.—Income Tax, Household Tax, the former withdrawn in 1942; N.B.—Income Tax; Que.—Miscellaneous Stock-in-Trade, Tenants Tax, *et al*, not specified; Ont.—Income of Corporations derived from interest earnings on investments discontinued in 1944; Sask.—Special Franchise; Alta.—Franchise and Other Special. <sup>2</sup> Includes estimated values for some municipalities, also total exemptions incomplete. <sup>3</sup> Total exemptions have been applied against real property valuations.

<sup>4</sup> Includes some other types of valuations not specified. <sup>5</sup> Not available from published reports. <sup>6</sup> Includes temporary exemptions: \$87,687,736 (1941); \$81,572,103 (1942); \$76,494,294 (1943); and \$61,283,443 (1944).

<sup>7</sup> Detail not available. <sup>8</sup> Does not cross-add to total; see reports of Ontario Department of Municipal Affairs. <sup>9</sup> Cities only; exemptions for other municipalities not published.

<sup>10</sup> Cities, with exception of Drumheller; exemptions for other municipalities not published. <sup>11</sup> Includes \$170,953,380 (1941), \$177,991,707 (1942), \$184,383,801 (1943), and \$192,542,560 (1944) valuations of improvements, the total value of which was \$385,753,558 (1941), \$401,168,674 (1942), \$412,707,744 (1943) and \$435,017,282 (1944) and the maximum value at which they could be taxed was \$241,196,431 (1941), \$250,989,749 (1942), \$257,964,422 (1943) and \$274,063,507 (1944). <sup>12</sup> Consists of \$173,468,105 (1941), \$176,510,803 (1942), \$185,280,977 (1943) and \$185,522,072 (1944) valuation of exempted properties, and \$214,800,178 (1941), \$223,176,967 (1942), \$228,323,940 (1943) and \$242,474,722 (1944) exemptions of taxable improvements as referred to in Footnote 11.

<sup>13</sup> Does not cross-add to total, see report of British Columbia Department of Municipal Affairs. <sup>14</sup> See Footnotes 5, 6, 9, 10 and 12.

While complete figures for tax-exempt properties are not available for each province, it will be noted from the information given that these have assumed relatively high proportions. Most provinces have shown consistent increases in taxable assessed valuations which may be attributed largely to the stimulus to business and industry in general, arising from the War. Saskatchewan, however, shows a major reduction in total valuations. This is the result of a province-wide plan of re-assessment of rural municipalities by the Department of Municipal Affairs and is "the first occasion in Canada where an assessment system of such extensive proportions has ever been undertaken".\*

### Subsection 3.—Municipal Taxation

Table 38 shows, by provinces, the taxes levied by municipalities in comparison with collections in 1941, 1942, 1943 and 1944, and the total taxes outstanding at the end of those years. While these figures are as nearly comparable as may be obtained from existing published reports, they nevertheless reflect some inconsistencies due particularly to interprovincial variations in the division of responsibility for tax administration between municipalities and school authorities. In some instances school taxes are not included in the municipal levies. In Prince Edward Island 2 only of the 8 incorporated municipalities have their own individual school districts and levy and collect the school taxes. In Nova Scotia prior to 1943 and in New Brunswick prior to 1944, cities, towns and villages only levied and collected the school taxes. Hence the figures shown for these provinces are, generally speaking, exclusive of rural school taxes particulars of which are not available from published reports. Commencing with 1943, however, under a program for establishing "larger school units" in Nova Scotia, some municipalities have been levying and collecting the school taxes for and on behalf of the rural school boards situated therein. A similar program has also been inaugurated in New Brunswick, so that more complete figures are now available as the larger school units are gradually established. Prior to 1943 the figures for Alberta were incomplete because municipal taxes did not include certain school and hospital levies, which were not collected by the municipal unit or were regarded as "trust" taxes. This deficiency was corrected in the 1943 figures and reference to this fact is made in footnote 9, of Table 38, p. 925. In Quebec, while school taxes, with few exceptions, are levied and collected by the school corporations which function independently of municipal authorities, they are, nevertheless, included in this tabulation for purposes of greater interprovincial comparability. It will therefore be apparent from the foregoing that the figures in Table 38, except in the case of Quebec, represent only the amount of tax levies, collections and arrears of the municipalities, and include school taxes only to the extent that such are also levied and collected by the municipalities for and on behalf of local school authorities. Taxes for schools outside incorporated municipal organizations are not included.

\* Annual report of the Department of Municipal Affairs of the Province of Saskatchewan for the fiscal year ended Apr. 30, 1941.

<sup>1</sup> Includes estimates in some instances as actual figures are not available. <sup>2</sup> Not reported separately.

<sup>3</sup> Excludes \$1,243,384 in 1942, \$1,266,087 in 1943 and \$1,328,914 in 1944 compensation through Provincial Government for loss of income tax (see pp. 930 and 937).

<sup>4</sup> Excludes cities and towns. <sup>5</sup> Cities and towns only.

<sup>6</sup> Reduction from 1943 accounted for by write-off of tax titles for City of Winnipeg.

<sup>7</sup> Includes certain provincial and other special taxes (see text following this table), but excludes taxes in "Improvement Districts".

<sup>8</sup> Cities only; not reported separately for other municipalities.

<sup>9</sup> A large part of this increase is due to the inclusion of school and hospital levies formerly omitted because the municipal unit did not collect them or regard them as "trust" taxes.

<sup>10</sup> See notes applying to the provinces.

Because of these inconsistencies and the fact also that there are considerable differences in the division of responsibility for services between the Provincial Governments and their respective municipalities, extreme caution should be exercised in using these figures as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan and Alberta, municipalities

are required to levy certain taxes for and on behalf of the Provincial Government and for other special purposes for which there is no comparable situation in other provinces. The amount of such taxes included in the municipal levies in these two provinces, are as follows:—

Item	1941	1942	1943	1944
	\$	\$	\$	\$
Saskatchewan—				
Public Revenue Taxes (Provincial).....	1,833,846	1,785,638	1,718,209	1,650,131
Telephone and Hail Taxes.....	1,327,092	1,574,966	1,652,003	2,208,942
Totals, Saskatchewan.....	3,160,938	3,360,604	3,370,212	3,859,073
Alberta—				
Social Services, Educational and Wild Lands Taxes (Provincial).....	1,077,694	1,045,855	983,286	986,205

There has been no marked fluctuation in the trend of municipal tax levies in Canada in the years 1941-44. While most provinces show increases, this does not necessarily mean an increased burden on the individual taxpayer in all instances, but is more the result, in part at least, of the increases reflected in assessed valuations. In Nova Scotia and New Brunswick the increases are, to a considerable extent, due to the establishment of "larger school units" previously referred to in this Section, whereby some municipalities are now levying certain taxes which formerly were levied by rural school boards. The most significant change that occurred during this period was the increase in tax collections in relation to total levies; this in turn has resulted in substantial reductions in the amount of unpaid taxes outstanding although these are still relatively high in most provinces. The situation for different classes of municipalities will, of course, vary considerably. Reference has heretofore been made to the Improvement Districts in Saskatchewan and Alberta, which although not being incorporated municipalities are, nevertheless, maintained by the Provincial Governments more or less as self-sustaining areas on the same basis. Taxation figures for these districts are excluded from Table 38 but by reason of the special significance attached thereto in relation to municipal organization in these provinces, and the fact that such may become incorporated, or part of existing municipalities at some future date, the corresponding information with respect thereto is shown in Table 39.

### 39.—Taxation in Improvement Districts of Saskatchewan and Alberta, 1941-44

<sup>1</sup> Includes Public Revenue (Provincial) Taxes of \$60,529 (1941); \$60,471 (1942); \$59,786 (1943); and \$56,998 (1944).

<sup>2</sup> Not available. <sup>3</sup> Includes Social Services, Educational and Wild Lands Taxes (Provincial) of \$196,314 (1941); \$193,717 (1942); and \$184,336 (1943); not shown separately in 1944. <sup>4</sup> Not reported separately.

## Subsection 4.—Municipal Debt

The rapid growth experienced by municipalities in Canada coupled with increased demands and responsibilities for improvements, schools, utilities, and other services or facilities has resulted in the incurring of a heavy burden of debt. Debenture borrowings increased rapidly in the period 1900-12 and again during the 'twenties and early 'thirties. Since 1933, however, the trend has been downward. Several important factors have contributed to this decline in municipal indebtedness, not the least important of which has been the measure of control exercised by Provincial Government departments over capital expenditures involving the incurring of debt. In addition, there was a more or less orderly retrenchment during the depression years following periods of what proved to be unwarranted expansion which, along with widespread demands to ease the tax burden on real property, has resulted in capital undertakings and works requiring debenture financing being severely curtailed. A further significant factor in this regard is that the greater part of the municipal long-term debt is represented by serial or instalment-type debentures, which require yearly repayments of principal. While the benefits of debt reduction are of course manifold, certain expenditures have been sorely needed in many communities for the rehabilitation of existing assets and for new improvements necessitated by the normal expansion and development that has taken place. These were sacrificed in the earlier years mainly in the interest of the taxpayer; subsequently, with the advent of the War in 1939, this policy of deferment was continued, if not extended, to free the financial market to the needs of the Dominion Government in meeting its war financing requirements. Municipalities having been denied, either voluntarily or otherwise, improvement programs for so long, will show a natural tendency to get these under way as soon as possible in correlation with master post-war plans of the Dominion and Provincial Governments. Table 40 shows figures of municipal indebtedness for 1944 and includes temporary loans and other liabilities in addition to debenture debt. Table 41 shows comparative figures for 1941, 1942, 1943 and 1944. The 1942 Year Book contains at pp. 792-793, a detailed description of the basis on which the information has been compiled. Reference should be made thereto, as well as to the footnotes to Table 40 in interpreting the information. A table at p. 791 of the 1941 Year Book shows the bonded indebtedness of municipalities from 1919 to 1938.

## 40.—Debt of Municipal and School Corporations for their Fiscal Years Ended in 1944

NOTE.—Compiled from published reports of Provincial Departments of Municipal Affairs, auditors reports and financial statements of municipalities, and information secured from other official sources. For a general explanation in regard to the items covered by this table, see text above.

Net direct and indirect debt of municipalities decreased by \$52,545,181 in 1944 bringing the total decrease in the period 1940-44 to \$253,259,563. Retirement of direct debenture debt accounted for the major portion of the decrease during this period, although there have also been substantial reductions in unfunded liabilities. The decreases in debenture debt are due to the factors mentioned elsewhere in this Section while improved tax collections have made it possible for municipalities to avoid heavy temporary borrowings and reduce other current liabilities. It is pointed out in this respect that debenture debt figures are intended to represent only principal unmatured. Principal past due, whether in default or unpaid because of non-presentation, has been included with accounts payable and other liabilities. It is impossible to ascertain if this is a true statement of fact in all cases, however, as some reports do not indicate the exact situation. The more significant items available in this regard are given in Table 42.

### PART III.—OUTSTANDING DEVELOPMENTS IN THE TAXATION FIELD

Prior to the War of 1914-18, the Dominion Government was able to finance its expenditures through the imposition of such indirect taxes as customs and excise duties. There were minor direct taxes imposed for other purposes than revenue but these, in the fiscal year 1914, amounted to less than 1.5 p.c. of the total revenue from taxation collected by the Dominion Government. To-day the significance of direct taxation is exemplified by the fact that direct taxation collected by the Dominion Government (including income taxes, excess profits tax, gasoline tax and succession duties) accounts for about 60 p.c. of total taxation.

The unprecedented financial demands of the War of 1914-18 began to be felt by 1915 and between 1915 and 1917 the Dominion entered the direct-taxation field with the imposition of taxes on banks, trust and loan companies, insurance companies and business profits. The income tax was introduced in Canada in the latter year and continued to be an important source of revenue in the period between the two wars. The outbreak of war in 1939 and the resulting rapid expansion of expenditures by the Dominion led to a very substantial increase in individual and corporation income tax rates, the tax on excess profits was revived and made much more severe and the Dominion entered the fields of succession duties and gasoline taxes (the latter are semi-direct) which had hitherto been imposed exclusively by the provinces.

The first reductions to be made in direct tax rates, which were at such high levels during the war years, were presented in the 1945-46 Budget and included: a reduction of 4 p.c. in individual income tax for 1945 and of 16 p.c. for 1946; reduction of the 100 p.c. rates of excess profits tax to 60 p.c. from Jan. 1, 1946; and an increase in the minimum standard profit under excess profits tax from \$5,000 to \$15,000 from Jan. 1, 1946.

The place that direct taxation has assumed in the general taxation picture and its incidence on the purse of the ordinary taxpayer has made it advisable to give this subject separate treatment but this should not detract attention from the important place that indirect taxation, through customs, excise and sales taxes, still holds in the taxation burden that the individual taxpayer is called upon to bear. (See Table 6, p. 886.)

In order to present a clearer picture of the main elements of direct or semi-direct taxation, Part III has been divided into three Sections, dealing with income tax, gasoline taxes and succession duties, respectively.

#### Section 1.—Income Tax\*

The income tax was instituted in 1917, as a part of what was known as war-tax revenue. Before the outbreak of the War of 1939-45 it had become a permanent and important part of the taxation structure, and the chief source of raising ordinary

\* More detailed information is given in the report "Taxation Statistics" published in April, 1946, by the Taxation Division, Department of National Revenue.

revenue. In many respects, it is an ideal form of direct taxation: in theory its incidence is admittedly fair and just, and the experience and machinery for the collection of this tax has been built up over a long period of years. The War, with its increased burden of taxation which, in turn, has made necessary the prepayment of taxes on a "pay-as-you-go" basis, has necessitated changes in the presentation of the statistics. Previously, comparisons for individuals between income assessed and tax paid were subject to the important qualification that, while the *income assessed* related to the net income upon which assessments had been approved for the year designated although the income itself was earned two years previously, the figures of *tax paid* included arrears of taxes that were assessed in previous years and even prepayments of taxes not due in the year under review. Under the present system, large sums of money are being collected month by month from individuals or their employers during the taxation year to which they apply. Analyses of *taxes paid* have not the same significance now as formerly except as indicating the trend of general collections: analyses of taxes *assessed for the taxation year* have now more significance. On the new basis the statistics are related to the year in which the income is earned by the taxpayer and all incomes earned in a particular year will be combined to form the taxation-year statistics for that year regardless of when the assessments are made by the Department.

### Subsection 1.—Collection Statistics

**Collections on a Fiscal-Year Basis.**—Collection statistics are gathered by the accounting section at the time the payments are made and, therefore, have the value of being very up-to-date. Their timeliness has been enhanced within the past few years by the adoption of the "pay-as-you-go" system which results in collecting tax substantially during the year in which the income is earned and, on the average, about ten months prior to the actual filing of an income tax return by the taxpayer. The payments on behalf of most taxpayers, however, are made by their employers and a cheque from one employer may cover the tax payments of hundreds of employees. At this stage, therefore, it is not possible to link the moneys received to the individuals who are, in the final analysis, contributing the tax. Collection statistics, as such, for this reason are not capable of being closely related to the persons who are being taxed and any statistical tables that attempt to describe the taxpayer, such as by occupation or income class, must be based on the income tax return which is filed by the taxpayer many months after the payment of his tax. However, collection statistics, if interpreted along with the tax rate, do serve the purpose of indicating the general trend of income upon which tax is levied well in advance of the assessment data.

The statistics given in Table 1 represent annual collections on a Government fiscal-year basis.

<sup>1</sup> Including refundable portion and therefore does not agree with Table 8, p. 890.

**Collections on a Taxation-Year Basis.**—Table 1 reflects the total taxes collected during a Government fiscal year without regard to which particular taxation years the revenues applied. In Table 2 the collection of the more important taxes are re-arranged in order to reveal the revenues received for the account of each succeeding taxation year.

A taxation year is a period of time during which income is received and becomes subject to tax at rates laid down in the Act. In the case of an individual the taxation year is almost always the calendar year. In the case of a corporation the taxation year is the calendar year in which the company's fiscal period ends. Under the present system of collection, a substantial portion of the taxes is collected during the year in which the income is earned, that is to say, during the taxation year, and the balance is collected almost entirely in the two following years.

The general Head Office account for a taxation year is held open for statistical purposes for a period of three years. Thereafter, any taxes collected for a "closed" year are credited to a "Combined Years Account". As of Mar. 31, 1946, general Head Office accounts were open for the taxation years 1946, 1945, and 1944 and the Combined Account was known as 1917-43. All collections in the Combined Account are, in Table 2, credited to the last year in the Combined Account which in this case is 1943. The collections received in the Combined Account are relatively small and as each taxation year eventually receives the "combined" revenues for

a twelve-month period it is not believed that this procedure in any way affects the comparative table and it has the advantage of permanently closing off a taxation year for general statistical purposes. It is not to be understood from the foregoing description that the account of an individual taxpayer is closed off for any taxation year until full payment is received.

Table 2 distributes the collections from individual and corporation income and excess profits tax on a taxation-year basis.

**2.—Individual and Corporation Income and Excess Profits Tax Collections by Taxation Years, 1917-45 and Jan. 1 to Mar. 31, 1946**

1946 <sup>1</sup> .....	75,672,266	15,910,172	84,482	30,765,651	122,432,571

<sup>1</sup> The accounts for these taxation years are not yet closed and the figures are therefore not yet complete; there will be a small change in the 1944 account and substantial additions to the 1945 and 1946 accounts.

**Adjusted Corporation Figures.**—The Income War Tax Act and the Excess Profits Tax Act, 1940, each levy a separate tax on the same corporation profits in each year since 1940. The administration of the two Acts, the assessment of the two taxes and the collection of the two taxes is done concurrently by the Taxation Division. This has caused many corporation taxpayers to pay their taxes by means of a single cheque combining the two taxes without sufficient advice as to how the remittance is to be allocated between income tax and excess profits tax. The result of this practice has been that too much revenue has been credited to income tax and too little to excess profits tax. For those who wish to study the productivity of the two separate taxes the collection figures as remitted by the taxpayer are somewhat misleading.

Because of the variable rates implicit in the excess profits tax, no precise correction can be made but an approximate adjustment based on a large sample of cases is included in Table 3. It should be emphasized that the adjusted figures involve no change in the total taxes collected from corporations but simply reduces the amount credited to income tax and correspondingly increases the amount credited to excess profits tax.

### 3.—Adjusted Corporation Tax Collections, Taxation Years 1940-46

Taxation Year	Corporation Income Tax	Corporation Excess Profits Tax	Total
	\$	\$	\$
1940.....	133,248,778	120,664,171	253,912,949
1941.....	184,188,053	202,654,352	476,842,405
1942.....	226,848,767	439,834,553	666,683,320
1943.....	225,352,875	512,051,811	737,404,686
1944.....	216,048,238	465,703,978	681,752,216
1945.....	154,204,362	332,396,069	486,600,431
1946 <sup>1</sup> (three months).....	14,791,634	31,884,189	46,675,823

<sup>1</sup> The accounts for these taxation years are not yet closed and the figures are therefore not yet complete; there will be a small change in the 1944 account and substantial additions to the 1945 and 1946 accounts.

### Subsection 2.—Individual Income Tax Statistics

As stated on p. 932, individual income tax statistics are henceforth to be presented on a taxation-year or calendar-year basis. Individual assessment statistics for the 1941 taxation year constitute the first year of the presentation on this basis and are summarized in Table 4. These figures have value for research purposes and as a matter of record, but it is realized that they are already out of date from the standpoint of studying current taxation of individuals, and therefore an estimate for the 1945 taxation year is presented in Table 5.

### 4.—Total Individual Assessments, by Income Classes, Occupational Classes and Provinces, Taxation Year 1941

NOTE.—The income used in this table is "taxable income" arrived at after deducting charitable donations but before deduction of specific exemptions for single or married status or for dependents.

Income Class	Tax- payers As- sessed	Total Income Assessed	Total Tax Assessed	Class or Province	Tax- payers As- sessed	Total Income Assessed	Total Tax Assessed

**Preliminary Estimate, 1945 Taxation Year.**—Income tax returns for the 1945 taxation year were not yet due or received at the time the estimates shown in Table 5 were compiled, so that the information is necessarily very tentative. It is not possible, at present, to analyse these data on a provincial or an occupational basis in order to present them on a comparable basis with the 1941 final estimate.

The flat 4 p.c. reduction of individual income tax for 1945, announced in October of that year, and the recovery of Family Allowance payments made to those who also received income tax reductions for dependents are estimated in the footnote to Table 5. Family Allowance payments were begun in July, 1945, and the recovery is for a six-month period only.

### 5.—Individual Income Tax Estimates, Taxation Year, 1945

NOTE.—The income used in this table is the income prior to allowable deduction for charitable donations or medical expenses.

Income Class	Taxpayers	Total Income	Total Tax	Average Tax
	No.	\$'000	\$'000	\$

<sup>1</sup> Less: 4 p.c. reduction per 1945 Budget, \$27,270,000; plus: estimated Family Allowance recovery, \$17,100,000; adjusted tax receivable, \$671,596,000.

## Subsection 3.—Corporation Income Tax Statistics

In the following tables, corporation statistics are presented on a taxation-year basis prior to assessment. The data has been extracted and compiled from the returns shortly after they have been filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Inasmuch as 1944 is the first year of the record, the figures stand alone without any basis of reference to previous experience. Historical tables of the more significant statistics will later be compiled on the same basis as 1944. Provincial figures contain an unavoidable bias in favour of the central provinces, Ontario and Quebec, which is caused by the fact that many large companies which operate across Canada file their returns in either of these two provinces.

## 6.—Summary Statistics for Corporations Reporting a Profit, Taxation Year, 1944

Item	Com- panies Reporting	Net Taxable Income	Income Tax Declared	Excess Profits Tax Declared	Re- fundable Portion
<b>Companies Taxable under the Income War Tax Act</b>	<b>No.</b>	<b>\$</b>	<b>\$</b>	<b>\$</b>	<b>\$</b>

## Section 2.—Gasoline Taxes

The provincial gasoline taxes can be termed "direct taxes" only because the consumer knows exactly the amount of tax he is paying when purchasing gasoline. The Dominion tax is assessed against the producer or importer but the retail price was increased to cover the tax. These taxes have been brought together in this Section on account of the large number of Canadian motorists who are directly affected, while the non-motoring portion of the population is affected by the effect of higher gasoline taxes on delivery costs and bus transportation.

The present rates of gasoline tax, per gallon, are: Dominion, 3 cents; Prince Edward Island, 10 cents; Nova Scotia, 10 cents; New Brunswick, 10 cents; Quebec, 8 cents; Ontario, 8 cents; Manitoba, 7 cents; Saskatchewan, 8 cents; Alberta, 7 cents; British Columbia, 7 cents; Yukon, 3 cents.

There are certain refunds and exemptions allowed by the various taxing authorities and these are set out in the Bureau's publication "The Highway and the Motor Vehicle in Canada".\*

#### 8.—Provincial Government Receipts from Gasoline Taxes, Respective Fiscal Years Ended in 1930-44<sup>1</sup>

NOTE.—For statistics of gallage on which these taxes are levied, see p. 672. For periods covered by fiscal years, see headnote to Table 9, p. 940. Figures for 1923-29 are given at p. 978 of the 1945 Year Book. Receipts from the gasoline tax in Yukon, which became effective June 15, 1940, amounted to \$4,341 in 1941, \$19,562 in 1942, \$28,981 in 1943 and \$26,540 in 1944.

Year	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskat- chewan	Alberta	British Columbia

<sup>1</sup> Figures below the rule are for the fiscal years ended nearest to Dec. 31 of the year stated.

<sup>2</sup> Fourteen months.

<sup>3</sup> Five months.

<sup>4</sup> Actual net receipts for fiscal years ended nearest Dec. 31, 1940. Provincial gasoline tax revenues of subsequent years are guaranteed at this level by the Dominion Government (6 Geo. VI, c. 13).

The Dominion Government, in the Third War Budget of Apr. 29, 1941, imposed a tax of 3 cents per gallon on gasoline. Proceeds from this tax amounted to \$24,752,396, \$24,897,924, \$24,930,255 and \$29,670,693 in the years ended Mar. 31, 1942, 1943, 1944 and 1945, respectively.

### Section 3.—Succession Duties

The first imposition of succession duties in Canada was in 1892, when Nova Scotia, New Brunswick, Quebec and Ontario enacted legislation of this nature. The dates of their introduction into the other provinces are given at pp. 941-950.

Succession duties have grown to be an important if fluctuating part of provincial revenues and Table 9 shows the receipts from this source from 1921.

\* Obtainable from the Dominion Statistician, Ottawa, price 25 cents.

In 1941, the Dominion, under pressure of war finance, entered this field of taxation. The Dominion Succession Duty Act was enacted as c. 14 of the session of 1940-41. Certain amendments were made to the Act by c. 25 of 1942; c. 37 of 1944 and by c. 18 of 1945. In the 1946 Budget presented on June 27 the rates of Dominion succession duties were doubled, but it was stipulated that any payment made to the provinces on account of succession duties would be limited to one-half the succession duties payable to the Dominion. The Act is administered by the Department of National Revenue. Dominion receipts from succession duties for 1942 and 1945 are included in Table 9.

The entry of the Dominion into the field has complicated the problems as they present themselves to the executors and administrators of estates subject to duties. Not only do difficulties of the application of different schedules of rates to the same estates arise, but also questions of where assets are held, and whether and where they are transferable. Certain points have not yet been completely worked out by the courts. Moreover, apart from the evident double succession duties chargeable by the Dominion and the province in which the owner lived and died, duties charged on the same property by more than one province have in the past been common but inter-provincial legislation is now overcoming this situation.

The four classes of beneficiaries that are established under Dominion law (see p. 940) have, for example, specific rates that change with each classification. For Ontario, there are three different classes of beneficiaries (see p. 945) with quite different rates of duties attached to each class. It is common practice both in the Dominion and the provinces, for an initial rate to be charged based on the total value of the estate and an additional rate based on the bequest received by each individual. Thus, in the case of the Dominion, a person who receives a bequest of \$50,000, say, out of an estate of \$500,000 is charged the rate for a \$500,000 estate plus an additional rate for \$50,000, and the total rate is then applied in calculating the tax on his bequest of \$50,000.

In order to relieve against the dual taxation as between the Dominion and the United States, a tax convention was signed on June 8, 1944. One of the terms of this convention is that shares in a corporation organized in or under the laws of the United States or any of the individual States shall be deemed to be property situated within the United States, and shares in a corporation organized in or under the laws of Canada or of the provinces or territories of Canada shall be deemed to be property situated within Canada.

An agreement respecting Succession Duties between Canada and the United Kingdom was also signed June 5, 1946.

Under these circumstances, the difficulties of working out succession duty tables so as to show the combined effects of Dominion and provincial duties is realized. The best that can be done is to choose typical estates in the main classes laid down in the legislation and give a picture of the combined duties applicable in such cases. This has been attempted in the following series of tables in the hope that it will be useful in presenting to the student of this subject a general picture of the incidence of succession duties in Canada under conditions at present existing.

### 9.—Dominion and Provincial Receipts from Succession Duties, Respective Fiscal Years Ended in 1921-45

NOTE.—The fiscal years of the provinces end on the following dates: P.E.I., Dec. 31 to 1942 and thereafter Mar. 31; N.S., Sept. 30 prior to 1935 and Nov. 30 thereafter; N.B., Oct. 31; Que., June 30 to 1940 and Mar. 31 thereafter; Ont., Oct. 31 prior to 1935 and Mar. 31 thereafter; Man. and Sask., Apr. 30; Alta. and B.C., Mar. 31.

<sup>1</sup> Includes "Funds in lieu of Succession Duties". <sup>2</sup> Includes "Succession Duties Act" fees.  
<sup>3</sup> Eighth months. <sup>4</sup> Three months. <sup>5</sup> Fourteen months. <sup>6</sup> Five months. <sup>7</sup> Nine months.  
<sup>8</sup> Figures below the rule are for fiscal years ended nearest to Dec. 31 of year stated due to changes in the provincial fiscal years, figures are given in several cases for broken periods. <sup>9</sup> Ten months; Act came into force June 14, 1941. <sup>10</sup> Fifteen months. <sup>11</sup> Not available.

**Dominion Duty.**—Beneficiaries are divided into four classes, as follows:—

- (1) Widow or dependent child or dependent grandchild.
- (2) Husband; parent; grandparent; child over 18 years of age, not infirm; son- or daughter-in-law.
- (3) Lineal ancestor other than parent or grandparent; brother, sister or their descendant; uncle or aunt or their descendant.
- (4) Others.

No duty is payable on estates not exceeding \$5,000 or on bequests up to \$1,000 to any one individual, nor is duty levied on gifts to the Dominion or provinces, on residential property of certain diplomatic or consular officials, on pensions administered by the Canadian Pensions Commission or those payable by Allied Nations for war service nor on insurance moneys or annuities if the assured or person with whom contract was made was domiciled outside of Canada at the time of death. Provision is made for increased exemptions and reduced duties in the case of those dying as a result of war service and bequests to non-profit charitable organizations in Canada are exempt up to 50 p.c. of the aggregate net value of the estate.

Widows are exempt up to \$20,000, dependent children \$5,000 each and, in cases where dependent children do not benefit, the widow's exemption is increased by \$5,000 for each child who does not benefit. In the case of dependent orphan children, there is a further exemption of \$15,000 (in addition to \$5,000) divisible proportionately among such orphans according to the number of them and the value of each individual benefit. Duty is payable on the excess only when the limit is passed.

Gifts made during the lifetime are exempt if the transfer was carried out before Apr. 29, 1941, and the recipient of such gifts secured full possession at the time of the transfer and the donor (the deceased) thereafter did not retain any rights therein or secure any benefits therefrom.

If gift tax payable under the provisions of the Income War Tax Act has been paid in connection with the transfer made by a deceased person during his lifetime then no succession duty is payable in respect of such gift except to the extent that succession duty thereon is in excess of the gift tax.

Examples of the rates of duty and duty levied are given in the tables of the incidence of combined Dominion and provincial duties which follow.

**The Incidence of Combined Dominion and Provincial Succession Duties.**—The tables are intended to show, for each province, the effect of the combined Dominion and provincial duties on typical estates left to individuals, and in this way to present a comparison of the combined duties payable by such individuals for estates ranging from \$20,000 to \$1,000,000. The final rate of provincial duty shown is, in most cases, the result of the combination of two or more series of rates. In the following tables the beneficiaries under all the classes show the duties collectable where the estate of given value is left to one beneficiary only. It would be impossible in the Year Book to cover the many different classifications, exemptions and saving clauses to be found in the legislation of the nine provinces. The specific cases that have been worked out are selected to give a general picture of the effects of succession duty taxation across Canada. In every case the estate is assumed to be wholly situated within the province and the beneficiary domiciled therein to be the sole heir. The reader is referred to the legislation and to the taxing authority shown under each provincial heading for more complete information.

*Prince Edward Island.*—Succession duties were first imposed in 1894 by c. 5 of the Statutes of that year. The current legislation is c. 59 of 1940, as amended by c. 20 of 1941, c. 18 of 1942 and c. 30 of 1945, and the authority administering the Act is the Succession Duty Officer, Tax Branch, Department of the Provincial Treasury, Charlottetown.

Beneficiaries are divided into three classes, as follows:—

- (1) Widow with dependent child; dependent child under 21 years, or infirm.
- (2) Widow without dependent children; child not dependent; father; mother; brother; sister; grandchild; son- or daughter-in-law; step-child.
- (3) Others.

Estates passing to persons in Class (1) are exempt to the value of \$10,000 and to those in Class (2) up to \$5,000. Where nephews and nieces are the beneficiaries of an estate with an aggregate value not exceeding \$20,000, one-half of the

ordinary duty is charged. Duty is payable on the whole amount when the exemption limit is exceeded. No duty is levied on bequests for religious or charitable purposes to be carried out in the Province, or by a resident thereof or by a corporation with head office in any of the three Maritime Provinces which carries out charitable, religious or educational bequests in Prince Edward Island, or in any province in Canada, other than Prince Edward Island, which is shown to allow the same exemption on property given, devised or bequeathed for religious, charitable or educational purposes to be carried out in Prince Edward Island.

#### 10.—The Incidence of Dominion and Prince Edward Island Succession Duties on Typical Estates

Class	Aggregate Net Value	Dominion Duty			Provincial Duty			Combined Duties
		Dutiable Value	Rate	Duty	Dutiable Value	Rate	Duty

<sup>1</sup> The provincial age limit for dependent children is 21 years.

*Nova Scotia*.—Succession duties were first instituted in 1892 (c. 6, 1892). The latest consolidation of the provincial legislation appears in c. 18 of the Revised Statutes of 1923. Numerous amendments have been made since that time. Full information may be obtained on application to the Supervisor of Succession Duties, Department of the Attorney General, Halifax.

Beneficiaries are divided into four classes, as follows:—

- (1) Widow with dependent child; or dependent child.
- (2) Widow without dependent child; child not dependent; husband; parent; grandparent; grandchild; son- or daughter-in-law.
- (3) Other lineal ancestor or descendant; brother, sister or their child or grandchild; uncle, aunt or their child or grandchild.
- (4) Others.

Estates not exceeding \$5,000 are exempt from succession duty and this exemption is increased to \$10,000 in the case of beneficiaries falling into Classes (1) or (2) p. 942. Bequests for religious, charitable or educational purposes within the province are subject to duty at the same rates as Class (2). In all cases, duty is payable on the whole amount when the exemption limit is passed.

<sup>1</sup> Exclusive of 10 p.c. surtax.

<sup>2</sup> Exclusive of provincial surtax.

*New Brunswick.*—Succession duties were first instituted in 1892 by c. 6 of the Statutes of that year. The current legislation is c. 12 of 1934, as amended, and a consolidation of the various Acts has been issued under date of May 1, 1942. Full information may be obtained on application to the Succession Duty Office, Department of the Provincial Secretary-Treasurer, Fredericton.

Beneficiaries are divided into three classes, as follows:—

- (1) Wife; child; husband; parent; son- or daughter-in-law.
- (2) Other lineal ancestor or descendant; brother, sister or their children or grandchildren; uncle, aunt or their children or grandchildren.
- (3) Others.

No duty is payable on estates not exceeding \$1,000. This exemption is extended to \$25,000 where the beneficiary falls under Class (1) above and to \$5,000 in the case of those in Class (2). Duty is payable on the whole amount when these limits are passed. Bequests for religious, educational or charitable purposes within the Province are exempt from duty.

*Quebec.*—Succession Duties were first instituted in this Province in 1892 by c. 17 of the Statutes of that year. The current legislation under which they are collected is c. 18 of 1943. As stated at p. 941, the following text and table can give only a broad outline of such duties as applied to comparable classes of beneficiaries in other Provinces. Full details regarding other cases may be obtained from the Act quoted or from the Collector of Succession Duties, Provincial Revenue Offices, Quebec.

Under the legislation, beneficiaries are divided into three classes, as follows:—

- (1) Those in direct ascending or descending line between consort, between father- or mother-in-law, and son- and daughter-in-law, between step-father or step-mother and step-son and step-daughter. There is no limitation of degree in the direct ascending or descending line between these relationships.
- (2) Those in collateral line including a brother or sister, or descendant of a brother or sister of the deceased, or to a brother or sister, or son or daughter of a brother or sister, of the father or mother of the deceased.
- (3) Others.

No duty is payable when the aggregate value of the property passing to persons in Class (1) does not exceed \$10,000. This sum is increased by \$1,000 for each child who has survived or has left surviving descendants. To beneficiaries in Class (2) no duty is payable on bequests up to \$1,000 and the same exemption is extended to

beneficiaries in Class (3) who have been in the employ of the testator for five years or more. No duty is payable on legacies for religious, charitable or educational purposes in Quebec and the same privilege is extended to legacies for similar work outside the Province, provided that the Province or State within which the work is to be carried out extends reciprocal privileges under its succession duty laws.

*Ontario.*—Succession duties were first instituted in 1892 by c. 6 of the Statutes of that year. The current legislation is c. 1 of 1939 (Second Session) as amended, and full information may be obtained on application to the Succession Duty Office, Treasury Department, Parliament Buildings, Toronto.

Beneficiaries are divided into three classes, as follows:—

- (1) Widow; child; husband; parent; grandparent; grandchild; son- or daughter-in-law.
- (2) Brother; sister; nephew; niece; uncle; aunt; cousin; child of nephew or niece.
- (3) Others.

No duty is payable on estates not exceeding \$5,000 in aggregate value, nor on estates not exceeding \$25,000 devised to persons in Class (1), nor on those not exceeding \$10,000 devised to persons in Class (2). Where the aggregate value of an estate does not exceed \$25,000 the shares in such an estate passing to beneficiaries in Class (1) are exempt from duty. The same rule applies to shares of beneficiaries in

Class (2) where the aggregate value does not exceed \$10,000. Where the aggregate value does not exceed \$5,000 the estate will be exempt from duty regardless of what class or classes of persons inherit.

Where any person in Class (3) was in the employ of the deceased for at least five years immediately prior to his death, no duty shall be payable with respect to any benefits which such person derived from the deceased where the total value of such benefits is not in excess of \$1,000. Such benefits however, while exempt, are nevertheless taken in as a factor in fixing the rates applicable to the dutiable portions of the estate.

Requests for religious, charitable or educational purposes to any religious, charitable or educational organization which carries on its work solely in Ontario are exempt from duty and are altogether ignored in the computation of duty on the portions of the estate which are not exempt. The same rule applies to the Canadian National Institute for the Blind, the Canadian Red Cross Society and other approved patriotic organizations.

<sup>3</sup> Plus a surtax of 20 p.c.

<sup>4</sup> Plus a surtax of 25 p.c.

*Manitoba.*—Succession duties were first instituted in 1893 by c. 31 of the Statutes of that year. The current legislation is c. 201 of the Revised Statutes of Manitoba, 1940, as amended, and full particulars may be obtained on application to the Administrator, Succession Duties Division, Department of the Provincial Treasurer, Winnipeg.

Beneficiaries are divided into three classes, as follows:—

- (1) Widow; husband; child; parent.
- (2) Grandparent; grandchild; son- or daughter-in-law; brother or sister or child of such brother or sister.
- (3) Others.

A general exemption of \$5,000 is allowed beneficiaries in Class (1), whether or not they reside in the Province, but this amount is extended to \$25,000 when the beneficiary is resident in the Province; duty is payable on the whole when the limit is passed. No duty is payable on estates not exceeding \$1,500, nor on bequests to individuals up to \$300. Property devised for religious, charitable or educational purposes within the Province, up to \$2,000 for any one of such purposes, is exempt and any surplus over \$2,000 for such purposes is subject to Class (2) rates. A further exemption of \$5,000 to a widow, or child under 18 years of age, or both, and of \$10,000 to a widow with more than one child, or two orphan children under 18 years, is granted in the case of money received as the proceeds of an insurance policy.

<sup>2</sup> Exclusive of surtax on provincial duty.

*Saskatchewan.*—Succession duties were first instituted in the Province of Saskatchewan at the time of its origin in 1905. They were introduced in the former Northwest Territories by c. 5 of the Statutes of the Second Session of the Northwest Legislature in 1903 and the legislation was continued in force under the provisions of the Saskatchewan Act. The current legislation is c. 50 of the Revised Statutes of 1940, and full information may be obtained on application to the Director, Succession Duty Division, Revenue Building, Regina.

There are three classes of beneficiaries, as follows:—

- (1) Widow; child; husband; parent; grandchild; son- or daughter-in-law.
- (2) Other lineal ancestor; brother, sister or their descendant; brother or sister of parent or their descendant.
- (3) Others.

Exemptions (with duty payable on the whole when limit is passed) are \$15,000 to those in Class (1), \$2,500 to those in Class (2) and \$1,000 in the case of others.

Additional rates of duty are imposed on the whole estate when the deceased was not a resident of the Province and on shares of individual beneficiaries not domiciled in Saskatchewan.

*Alberta.*—Succession duties were first instituted in the Province of Alberta at the time of its origin in 1905. They were introduced in the former Northwest Territories by c. 5 of the Statutes of the Second Session of the Northwest Legislature in 1903 and the legislation was continued in force under the provisions of the Alberta Act. The current legislation is c. 57 of the Revised Statutes of Alberta, 1942, and full information may be obtained on application to the Collector of Succession Duties, Department of the Attorney General, Edmonton.

Beneficiaries are divided into four classes, as follows:—

- (1) Widow; husband; child; parent; grandparent; son- or daughter-in-law; resident in the Province.
- (2) Persons of the above degrees of affinity not resident in the Province.
- (3) Other lineal ancestor; brother; sister or their lineal descendant; brother or sister of parent and their descendants.
- (4) Others.

No duty is levied on estates the net value of which does not exceed \$1,000 and estates up to \$15,000 are exempt when the beneficiaries fall into Class (1), above. Gifts to the University of Alberta for educational purposes and property passing to that institution under the provisions of the ultimate Heir Act are also exempt from duty. Other bequests for religious, charitable or educational purposes within the Province are exempt up to \$2,000 for any one bequest.

<sup>1</sup> Exclusive of surtax of 20 p.c.

<sup>2</sup> Exclusive of surtax on provincial duty.

*British Columbia.*—Succession duties were first instituted in 1894 by c. 47 of the Statutes of that year. The current legislation is c. 270 of the Revised Statutes of 1936, as amended, and a consolidation of the Act and its amendments to Apr. 1, 1940, may be obtained on application to the King's Printer, Parliament Buildings, Victoria.

Beneficiaries are divided into three classes, as follows:—

- (1) Widow; child; husband; father; mother; grandchild; son- or daughter-in-law.
- (2) Grandfather; grandmother; uncle; aunt; cousin; brother; sister; or descendant of brother or sister.
- (3) Others.

An exemption of \$20,000 is granted where the estate passes to a beneficiary in the first class, duty being payable on the excess only when this limit is passed, and there is a further exemption to beneficiaries in this class on insurance up to \$25,000. No duty is payable on estates not exceeding \$1,000 in value and bequests for religious, charitable or educational purposes within the Province are likewise exempt from duty.

## PART I.—CURRENCY AND BANKING

### Section 1.—Historical Sketch

At pp. 900-905, inclusive, of the 1938 Year Book there appears a historical sketch of currency and banking in Canada, tracing certain features of the central banking system that finally led up to the establishment of the Bank of Canada. In chronological order these were:—

(1) *Central Note Issue*, permanently established with the issue of Dominion notes under legislation of 1868.

(2) *The Canadian Bankers' Association*, established in 1900 and designed to effect greater co-operation among the banks in the issue of notes, in credit control and in various aspects of bank activities.

(3) *The Central Gold Reserves*, established by the Bank Act of 1913.

(4) *Rediscount Facilities*, although originated as a war measure by the Finance Act of 1914, were made a permanent feature of the system by the Finance Act of 1923, which empowered the Minister of Finance to issue Dominion notes to the banks on the deposit by them of approved securities. This legislation provided the banks with a means of increasing their legal tender cash reserves at will.

## Section 2.—The Bank of Canada

### Subsection 1.—The Bank of Canada Act and Its Amendments

The Bank of Canada was incorporated in 1934 and commenced operations on Mar. 11, 1935. An account of the capital structure of the Bank and its transition from a privately owned institution to a wholly government-owned one is given at p. 800 of the 1941 Year Book.

The Bank is authorized to pay cumulative dividends of  $4\frac{1}{2}$  p.c. per annum from its profits after making such provision as the Board thinks proper for bad and doubtful debts, depreciation in assets, pension funds, and all such matters as are properly provided for by banks. The remainder of the profits will be paid into the Consolidated Revenue Fund of Canada and to the Rest Fund of the Bank in specified proportions until the Rest Fund is equal to the paid-up capital, when all the remaining profits will be paid into the Consolidated Revenue Fund.

The Bank may buy and sell securities of the Dominion and the provinces without restriction if of a maturity not exceeding two years, and in limited amounts if of longer maturity: short-term securities of the Dominion or provinces may be rediscounted. It may also buy and sell short-term securities of British Dominions, the United States or France without restriction, if maturing within six months, and such securities having a maturity exceeding six months in limited amounts. The Bank may buy and sell certain classes of commercial paper of limited currency, and, if endorsed by a chartered bank, may rediscount such commercial paper. Advances for six-month periods may be made to chartered banks, Quebec Savings Banks, the Dominion or any province against certain classes of collateral, and advances of specified duration may be made to the Dominion or any province in amounts not exceeding a fixed proportion of such government's revenue. The Bank may accept from the Dominion or Provincial Governments, or from any chartered bank or any bank incorporated under the Quebec Savings Banks' Act, deposits that shall not bear interest. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may deal in foreign exchange.

The provisions regarding the note issue of the Bank of Canada are dealt with at p. 958.

The Bank of Canada Act (c. 43, Statutes of 1934 and amendments) provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. Under the terms of the Exchange Fund Order, 1940, authorizing the transfer of the Bank's gold holdings to the Foreign Exchange Control Board, the minimum gold reserve requirement has been temporarily suspended. The reserve, in addition to gold, may include silver bullion; balances in pounds sterling in the Bank of England, in United States dollars in the Federal Reserve Bank of New York, and in gold currencies in central banks in gold-standard countries or in the Bank for International Settlements; treasury bills of the United Kingdom or the United States of America having a maturity not exceeding three months; and bills of exchange having a maturity not exceeding 90 days, payable in London or New York, or in a gold-standard country, less any liabilities of the Bank payable in the currency of the United Kingdom, the United States of America or a gold-standard country. In accordance with the terms of the Foreign Exchange Acquisition Order, 1940, the Bank of Canada sold foreign exchange with a Canadian dollar value of \$27,734,444 to the Foreign Exchange Control Board.

The chartered banks are required to maintain a reserve of not less than 5 p.c. of their deposit liabilities, payable in Canadian dollars, in the form of deposits with and notes of the Bank of Canada.

The Bank acts as the fiscal agent of the Dominion of Canada without charge and may, by agreement, act as banker or fiscal agent of any province. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The head office of the Bank is at Ottawa, and it has an agency in each province, namely, at Charlottetown, Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Calgary and Vancouver.

The Governor of the Bank is its chief executive officer and Chairman of the Board of Directors; he is assisted by a Deputy Governor and an Assistant Deputy Governor. The first appointments were made by the Government. Subsequent appointments are to be made by the Board of Directors subject to the approval of the Governor in Council.

At the first meeting of the shareholders on Jan. 23, 1935, seven directors were elected with terms as follows: one director, until the third annual general meeting (1938); two, until the fourth (1939); two, until the fifth (1940); and two, until the sixth annual general meeting (1941). Former directors continued in office when the Government took over the management of the Bank but directors are now appointed by the Minister of Finance with the approval of the Governor in Council for terms of three years. There are now eleven directors. In the transaction of the business of the Bank each director has one vote.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor and one member of the Board, which must meet once a week. This Committee has the same powers as the Board but every decision is submitted to the Board of Directors at its next meeting. The Board must meet at least four times a year. The Deputy Minister of Finance is an *ex officio* member of the Board of Directors and of the Executive Committee, but is without vote.

The Governor alone, or in his absence the Deputy Governor, has the power to veto any action or decision of the Board of Directors or the Executive Committee, subject to confirmation or disallowance by the Governor in Council.

### **Subsection 2.—The Bank of Canada and Its Relationship to the Canadian Financial System**

An article under this title is given at pp. 881-885 of the 1937 edition of the Year Book. It deals with such subjects as the functions of the Bank, its control and regulation of credit and currency, the mechanism by which such control is exercised, the expansion and contraction of credit, the mitigation of general economic fluctuations, the control of exchange operations, the advisory function of the Bank, and its duties as the Government's banker. An article on the wartime functions of a central bank appears at pp. 803-806 of the 1942 Year Book.

### **Subsection 3.—Bank of Canada Operations**

The expansion of Bank of Canada liabilities and assets has provided for increased Bank of Canada notes in active circulation (as the chartered bank-note issue is limited and is gradually being retired) and has enlarged the cash reserves of the chartered banks. The principal changes in Bank of Canada assets since

April, 1938, have been the rise in investments, partly to replace the gold and foreign-exchange holdings transferred to the Foreign Exchange Control Board under the terms of the Exchange Fund Order and Foreign Exchange Acquisition Order, dated Apr. 30, 1940, and the fluctuations in holdings of sterling exchange through which the Bank has temporarily financed Canadian dollar requirements of the Foreign Exchange Control Board.

<sup>1</sup> Not shown prior to 1944.

<sup>2</sup> The Exchange Fund Order, 1940, authorized the transfer of the Bank's gold holdings to the Foreign Exchange Control Board and temporarily suspended the requirement for a minimum gold reserve.

**Subsection 4.—The Industrial Development Bank**

The Industrial Development Bank was incorporated by Act of Parliament during 1944, commencing its banking operations on Nov. 1, 1944. This Bank was established to perform certain functions which the preamble to the Act of incorporation describes in the following terms:—

"To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises."

The Industrial Development Bank is a subsidiary of the Bank of Canada. The Directors are the Directors and Assistant Deputy Governor of the Bank of Canada and the President is the Governor of the Bank of Canada. The \$25,000,000 capital stock of the Bank of which \$10,000,000 is now paid up, was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises in Canada with respect to which it is empowered to:—

- (1) Lend money or guarantee loans.
- (2) Enter into underwriting agreements with regard to any issue of stock, bonds or debentures.
- (3) Acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.

The Bank may accept any form of collateral security against its advances, including real property.

The Industrial Development Bank is intended to supplement the activities of other lending agencies rather than to compete with them and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. The Bank is specifically prohibited from engaging in the business of deposit banking.

**The Industrial Development Bank Operations.**—The first annual report of the Bank dated Sept. 30, 1945, showed outstanding (i.e., the disbursed amount) loans and investments (excluding Government securities) of \$871,752. The following statement shows the classifications of authorized and outstanding loans and investments as of Sept. 30, 1945.

CLASSIFICATIONS OF AUTHORIZED AND OUTSTANDING LOANS AND INVESTMENTS

The monthly statement of assets and liabilities of the Industrial Bank as at June 30, 1946, showed outstanding loans and investments of \$4,039,460.

## Section 3.—Currency

## Subsection 1.—Canadian Coinage\*

The present standard of Canada is gold of 900 millesimal fineness (23·22 grains of pure gold equal to one gold dollar). Under the Uniform Currency Act of 1871, gold coin has been authorized but only very limited issues were ever made. Gold coins have not been struck since 1919. The British sovereign and half-sovereign, and United States eagle, half-eagle and double-eagle are legal tender. Subsidiary coin consists of 50-, 25- and 10-cent silver pieces,† 800 fine (reduced from 925 fine in 1920). Such subsidiary silver coin is legal tender to the amount of ten dollars. The 5-cent piece is legal tender up to five dollars and the 1-cent bronze coin up to twenty-five cents. There is no provision for the redemption of subsidiary coin. A table at p. 807 of the 1941 Year Book gives particulars of weight, fineness, etc., of current coins.

## 2.—Circulation of Canadian Coin as at Dec. 31, 1926-45

NOTE.—The figures are of net issues of coin. Figures for the years 1901-25 appear at p. 858 of the 1927-28 Year Book. Per capita figures are based on estimates of population as given at p. 127.

Year	Silver	Nickel	'Tombac'	Steel	Bronze	Total	Per Capita
	\$	\$	\$	\$	\$	\$	\$
1926.....	27,433,463	564,865	—	—	2,043,833	30,042,161	3·18

**The Royal Canadian Mint.**—The Ottawa Mint was established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan. 2, 1908. By 21-22 Geo. V, c. 48, it was constituted a branch of the Department of Finance, and by the Proclamation of Nov. 14, 1931, issued under Sect. 3 of that Act, it has, since Dec. 1, 1931, operated as the Royal Canadian Mint. At first the British North American provinces, and later the Dominion of Canada, obtained

\* Revised by the Royal Canadian Mint, Ottawa.

† The Currency Act of 1910 made provision for a silver dollar and a 5-cent silver coin. The former was not coined until 1935, when a limited issue was made as a jubilee coin. The 5-cent silver coin was coined freely until 1921. It still has limited legal tender but has been replaced in the coinage by the nickel 5-cent piece. In 1942 a new 5-cent piece was coined from 'tombac', a copper-zinc alloy, in order to conserve nickel for war purposes, and this coin was replaced in 1944 by a 5-cent coin composed of mild steel with a chromium finish.

their coins from the Royal Mint in London or from The Mint, Birmingham, Ltd. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation, of British sovereigns and of small coins struck under contract for Newfoundland and Jamaica. Previous to 1914 small quantities of gold bullion were refined, but during the War of 1914-18 the Mint came to the assistance of the British Government by establishing a refinery in which nearly twenty million ounces of South African gold were treated on account of the Bank of England. The subsequent great development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Most of the fine gold produced from the rough shipments from the mines is delivered to the Department of Finance (since Mar. 11, 1935, the Bank of Canada has acted as agent for the Government) in the form of bars of approximately 400 fine oz. each, the rest being sold in a convenient form to manufacturers. The fine silver extracted from the rough gold, when not required for coinage, is sold in New York or disposed of to local manufacturing firms.

An account of the organization and operational methods of the Royal Canadian Mint is given at pp. 888-892 of the 1940 Year Book.

### 3.—Annual Receipts of Gold Bullion at the Royal Canadian Mint, and Bullion and Coinage Issued, 1926-45

NOTE.—Although not presented in exactly the same form, figures for 1901-16 are given at pp. 857-858 of the 1927-28 Year Book and for 1917-25 at p. 894 of the 1936 edition.

### Subsection 2.—Canadian Note Circulation

**Dominion Notes.**—Dominion notes became established in 1868 and the legislation by which the issue was expanded with the growth of the country is given at p. 952 of the 1934-35 Year Book. A summary of the main features of the former Dominion note issue is given at p. 893 of the 1940 edition.

**Bank of Canada Notes.**—The Bank of Canada, when it commenced operations, assumed the liability for Dominion notes outstanding, which were replaced in public circulation, and partly replaced as cash reserves, by its own legal-tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50, \$100 and \$1,000. Deposits of chartered banks at the Bank of Canada completed the replacement of Dominion notes as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce the issue of their own bank notes gradually during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced.

There has been little change in the circulation of denominations of notes under \$5. In the denominations from \$5 to \$1,000, where Bank of Canada notes have partially replaced chartered bank notes or Dominion notes, there has been a large increase. On the other hand, the special Dominion notes in denominations from \$1,000 to \$50,000 which were used almost exclusively for inter-bank transactions or bank reserves, are no longer in use.

#### 4.—Denominations of Dominion or Bank of Canada Notes in Circulation, 1926, 1929, 1932 and 1943-45

NOTE.—Annual averages of month-end figures. The totals outstanding are not always multiples of the denominations of notes because of adjustments made according to scale when parts of mutilated notes are turned in for cancellation.

<sup>1</sup> Three-month average; not shown prior to October, 1944. The grand total is, however, twelve-month average.

**Chartered Bank Notes.**—The developments by which bank notes became the chief circulating medium in Canada in the period preceding the establishment of the Bank of Canada are described at pp. 900-905 of the 1938 Year Book. The main steps of this development that remained as permanent features of the system are outlined at pp. 809-810 of the 1941 Year Book.

The provisions regarding bank notes were materially changed with the establishment of the Bank of Canada under the Bank Act (c. 30) of 1944. The authority for both seasonal expansion and additional issue secured by deposit in the Central Gold Reserves was then terminated. Provision was made for a gradual reduction in bank-note circulation over a period of years as explained at p. 958. As a result of these changes, current data on bank-note circulation are not comparable with those of earlier years. However, statistics of total notes in the hands of the general public are comparable. This public circulation includes chartered bank notes together with Dominion or Bank of Canada notes, exclusive of those held by the banks as reserves. Statistics on this basis are shown in Table 5.

#### 5.—Annual Averages of Note Circulation in the Hands of the Public, 1926-45

NOTE.—Figures of circulating media in the hands of the general public for the years 1900-35 appear at p. 900 of the 1936 Year Book.

<sup>1</sup> Gross note circulation of chartered banks less notes of other chartered banks.

<sup>2</sup> Total issue

less notes held by chartered banks and notes deposited in the Central Gold Reserves up to March, 1935.

<sup>3</sup> Figures, to nearest million, supplied by the Bank of Canada.

<sup>4</sup> Figures based on estimates of population as given at p. 127.

<sup>5</sup> Gross note circulation only; notes of other chartered banks not available.

## Section 4.—Monetary Reserves

### Subsection 1.—Bank of Canada Reserves

The composition of Canadian gold reserves held by the Government is presented in the 1936 edition of the Year Book, at p. 895, for the years 1905 to 1934. Since March, 1935, the gold reserves have been held by the Bank of Canada. By authority of the Exchange Fund Act (c. 60, 1935), effective in July, 1935, they are valued at the prevailing current market price of gold. The effect of the revaluation, as from the above date, is shown in the chart at p. 886 of the 1937 Year Book. The new data are now to be found under the item "Reserves" in the "Assets" section of Table 1, p. 954. As explained in footnote 2 of that table, under the Exchange Fund Order of Apr. 30, 1940, the gold reserves of the Bank of Canada were transferred to the Foreign Exchange Control Board and the requirement that the Bank should maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada was temporarily suspended.

### Subsection 2.—Chartered Bank Canadian Cash Reserves

**Before the Establishment of the Bank of Canada.**—Up to March, 1935, legal tender cash reserves in Canada were made up partly of Dominion notes; partly of gold coin and bullion, and subsidiary coin, including these forms of cash held by the banks themselves; and as deposits in the Central Gold Reserves. In so far as these reserves were in actual gold or were in Dominion notes backed by gold, they were subject to the expanding or contracting influences of monetary gold imports or exports arising from Canada's balance of international payments, so long as Canada was on the gold standard.

### 6. Annual Averages of Cash Reserves of the Chartered Banks in Canada, 1926-45

NOTE.—Figures, to nearest million, supplied by the Bank of Canada. Cash reserves prior to Mar. 11, 1935, include gold and coin and Dominion notes held by the banks in Canada and deposits in the Central Gold Reserves not earmarked; since that date, they include notes and deposits with the Bank of Canada.

Year	Annual Average of Daily Figures	Annual Average of Month-End Figures	Year	Annual Average of Daily Figures	Annual Average of Month-End Figures
	\$	\$		\$	\$
1926.....	192,000,000	197,000,000	1936.....	225,000,000	225,000,000
1927.....	187,000,000	194,000,000	1937.....	240,000,000	240,000,000
1928.....	193,000,000	205,000,000	1938.....	254,000,000	252,000,000
1929.....	191,000,000	212,000,000	1939.....	269,000,000	268,000,000
1930.....	176,000,000	197,000,000	1940.....	289,000,000	287,000,000
1931.....	169,000,000	182,000,000	1941.....	313,000,000	308,000,000
1932.....	172,000,000	186,000,000	1942.....	342,000,000	340,000,000
1933.....	189,000,000	195,000,000	1943.....	423,000,000	413,000,000
1934.....	201,000,000	203,000,000	1944.....	538,000,000	527,000,000
1935.....	213,000,000	216,000,000	1945.....	603,000,000	593,000,000

**Since the Establishment of the Bank of Canada.**—When the Bank of Canada was established, the chartered banks turned over their reserves of gold in Canada and Dominion notes to the new bank in exchange for deposits with, and notes of, the Bank of Canada. It was provided that, henceforth, the chartered banks were to carry reserves in these forms amounting to at least 5 p.c. of their deposit liabilities in Canada. Since that time, therefore, the gold reserves against currency and bank credit have been in the custody of the central bank except as affected by the Exchange Fund Order, 1940, as explained under Bank of Canada reserves in Subsection 1.

## Section 5.—Commercial Banking

### Subsection 1.—Historical

Since one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in the one historical sketch, which is given at pp. 901-905 of the 1938 Year Book. A list of the banks at Confederation appears at p. 897 of the 1940 Year Book and bank absorptions since 1867 are given at pp. 812-813 of the 1941 edition. A table at pp. 894-895 of the 1937 Year Book shows the insolvencies since Confederation; there has been none since 1923.

**The Bank Act Revision of 1944.**—According to statute the charters of the commercial banks in Canada are renewable every ten years and, at the same time, the Bank Act is revised. The revision of 1944 resulted in the following principal changes:—

An important feature of the revision was the reduction in the par value of bank shares (Sect. 10) from \$100 each to \$10 each, the objective being to create a wider public distribution of such shares.

The banks will now report annually to the Minister of Finance in a prescribed form their earnings and expenses, and such statistics will be published for the banks as a group (Sect. 53). Statutory effect was also given to the practical responsibility of the Minister with regard to inner reserves [Sect. 56(9)].

The note circulation privileges of the chartered banks have been further restricted by statutory limitation whereby the Canadian note circulation of any chartered bank, already limited to 25 p.c. of its unimpaired paid-up capital on and after Jan. 1, 1945, will gradually decline as the right to issue or re-issue notes in Canada on and after that date has been cancelled, and will disappear completely after Jan. 1, 1950. Banks may not have outstanding in their own notes issued for circulation outside Canada an amount in excess of 10 p.c. of their paid-up capital (Sect. 61).

The desire to enlarge facilities for loans to farmers and fishermen was made possible by provision for "intermediate" credits to farmers and fishermen to increase the efficiency of their operations or to add to the amenities of life on the farm (Sect. 88). The banks have expressed themselves as willing and anxious to facilitate

loans of this character, those to farmers to come within the scope of the Farm Improvement Loans Act (one provision of which is that the rate of interest must not exceed 5 p.c. per annum) and the Dominion Government, under the terms of that Act, will guarantee the banks against losses up to 10 p.c. of their aggregate loans so guaranteed. Certain other amendments were made to this Section designed to ensure somewhat greater facilities for other types of borrowers and to simplify the process of taking security under the Section.

A statutory reduction was made in the maximum rate of interest or discount chargeable from 7 p.c. per annum to 6 p.c. per annum (Sect. 91). A proposal by the Minister of Finance that small loans might be made on the basis of an effective interest rate of  $9\frac{3}{4}$  p.c. per annum—considerably less than half the rate small-loan companies were then charging on similar loans—was ultimately abandoned by the Minister in view of the criticisms offered in the Banking and Commerce Committee, and the opinion of bankers that they would be able to expand such loans without exceeding the 6 p.c. maximum.\*

The liability of banks in respect of balances in Canada unclaimed during a period of ten years will be transferred to the Bank of Canada in return for the payment of a like sum to that institution (Sect. 92). Previously unclaimed balances were reported to the Minister of Finance, but remained the liability of the bank concerned.

### Subsection 2.—Combined Statistics of Chartered Banks

In order to afford a clear view of the nature of banking transactions in Canada, bank liabilities have been classified in Table 7 in two main groups: liabilities to shareholders and liabilities to the public. Only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are

\* The commercial banks have now entered the small and personal loans field in earnest and are building up substantial business along this line. Unfortunately, this business is not segregated from their general loans business so that no comparison of the field occupied by the commercial banks as compared with the small loans companies (see pp. 987-989) is possible.

divided into four groups, "other assets" being included in the total. Of interest to students of banking practice, the relative rates of increase of capital and reserve funds may be noted, also the great increase in the proportion of liabilities to the public to total liabilities, and the gradually increasing percentage of liabilities to the public to total assets. The chart on p. 962 showing the division of ownership of assets is of interest in this connection. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times. Holdings of Dominion and Provincial Government and municipal securities were relatively insignificant prior to the War of 1914-18.

### 7.—Development of Chartered Banking Business in Canada, 1916-45

NOTE.—These statistics are yearly averages computed from the twelve monthly returns. Figures for the years 1867-1880 will be found at pp. 918-919 of the 1938 Year Book, and for the years 1881-1915 at pp. 815-816 of the 1941 edition.

**Cheque Payments.**—The great bulk of monetary transfers in Canada and most other countries is made through the banks, payments in notes and coin being of relatively minor proportions. It is estimated that about 80 p.c. of our business transactions are financed by cheques. It follows that the amount of the cheques paid through the banks and charged to deposit accounts is widely used as a measure of the volume of financial transactions.

Statistics regarding these payments were formerly secured through the clearing houses or meeting places for representatives of the various banks in the principal cities and towns. There, they daily presented for payment the notes of other banks and the cheques drawn on other banks which had been cashed at their branches. The first clearing house was established at Halifax, N.S., in 1887. To-day, clearing houses are operating in 33 leading Canadian cities.

**Bank Debits.**—The statistics of bank clearings, the publication of which has been discontinued in Canada, have one great fault as a means of estimating the aggregate amount of cheque payments within Canada and, through it, the volume of business transactions. It records only dealings between two separate banks, ignoring cheque payments completed within one bank. These inter-banks payments have become relatively less important during the last twenty-five years with the number of separate banks declining from 18 in 1923 to 10 in 1931, at which standing it has remained.

These considerations led to an agreement by which the Canadian Banker's Association secured, from January, 1924, the monthly aggregate figures of the amount of cheques charged to accounts at all banking offices situated in the clearing house centres of Canada.

Reflecting the active economic conditions occasioned by six years of war, the cheques cashed by the banks reached a historical maximum during 1945. The transactions of 1944, the preceding high point, were exceeded by nearly 13 p.c. The advance was continuous year by year from 1938 to 1945, the gain over the pre-war period having been 121 p.c. While statistics of cheques cashed have been collected since 1924, it is evident that the standing of 1945 was greater than in any other year. The transactions of this nature amounted to \$46,670,000,000 in 1929, the culmination of the last major economic cycle, about 32 p.c. less than the \$68,385,000,000 recorded for 1945.

The average of six strategic factors, indicating the trend of economic conditions was greater in 1945 than in any other year. Five indexes used in this connection rose to a higher position than in 1944.

The advance in cheques cashed in 1945 over 1938 was general in each of the five economic areas. The percentage gain in the Prairie Provinces during the last two years over the pre-war period was pronounced. The total in 1945 at \$11,562,000,000 was nearly 153 p.c. greater than in 1938. The relative importance of the Prairie Provinces in this respect rose from 14.8 p.c. in 1938 to 16.9 p.c. in 1945.

### Subsection 3.—Statistics of Individual Chartered Banks

**Assets and Liabilities.**—The statistics in column 2 of Table 14 represent, for the years 1935 (when the Bank of Canada was established), 1941 and 1943 to 1945, the total of Bank of Canada notes in the possession of the chartered banks together with their deposits at the Bank of Canada. For 1929 (before the establishment of the Bank of Canada) they represent the totals of the banks' holdings of gold and coin in Canada, Dominion notes, and that part of their deposits in the Central Gold Reserves not required against their note issues.

### 14.—Principal and Total Assets of Individual Chartered Banks, 1929, 1935, 1941 and 1943-45

NOTE.—The statistics in this table are averages computed from the twelve monthly returns in each year.

Bank	Year	Cash Reserve Against Canadian Deposits <sup>1</sup>	Total Securities	Total Loans	Total Assets
		\$	\$	\$	\$
Bank of Montreal.....	1929	86,400,000	130,941,236	581,302,970	913,759,043
	1935	65,400,000	349,672,401	266,878,000	766,144,449
	1941	91,227,000	512,633,996	317,004,071	1,044,850,338
	1943	113,865,000	749,289,581	298,613,165	1,294,063,425
	1944	152,163,000	888,358,483	288,739,608	1,463,971,405
	1945	155,694,000	1,028,777,079	320,982,087	1,647,636,170
Bank of Nova Scotia.....	1929	18,400,000	44,107,378	172,881,551	275,257,022
	1935	23,400,000	103,828,021	110,217,442	277,368,870

<sup>1</sup> Absorbed by the Imperial Bank of Canada, May 1, 1931.

<sup>2</sup> Four-month averages; bank commenced business in September, 1929. The grand totals for 1929 are, however, twelve-month averages for all banks.

**Earnings of Chartered Banks.**—The chartered banks of Canada are for the most part Dominion-wide institutions, doing business in all parts of the country. Their earnings, therefore, reflect with very considerable accuracy the fluctuations of general business.

### 16.—Net Profits of Chartered Banks and Rates of Dividend Paid, for Their Business Years Ended 1940-45

NOTE.—The figures in this table in previous issues were not strictly comparable. The net profits of all banks for the years 1940-45 inclusive, are now shown after deductions for pension funds, bank premises, write-offs and all taxes.

**Branches of Chartered Banks.**—During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same (36 in 1881 and 1891, and 34 in 1901), but during the present century there has been in banking, as in industry, an era of amalgamations, the number of banks having dropped to 25 in 1913 and to 10 in 1931. That this has been far from involving a curtailment of banking facilities is seen in Table 7, which shows the development of the banking business since 1916, and in Table 17, which compares the number of branch banks existing in Canada at different periods, and indicates a growth from 123 in 1868 to 4,676, inclusive of sub-agencies, at Dec. 31, 1920. As at Dec. 31, 1944, the total stood at 3,087 (exclusive of 132 branches and 3 sub-agencies in other countries) the reduction having resulted from the closing of some unprofitable branches, and also from contractions brought about by war-time conditions. By Dec. 31, 1945, the total had increased to 3,106 (excluding 131 branches and 3 sub-agencies outside Canada).

**17.—Branches of Chartered Banks in Canada, by Provinces, as at Dec. 31, 1868, 1902, 1905, 1920, 1926, 1930, 1940, 1941 and 1943-45**

The number of branches of Canadian banks doing business outside Canada increased rapidly during the War of 1914-18 and the early post-war period, rising to a total of 206 in 1921. Since then the number has gradually declined to 131 branches in 1945.

## Section 6.—Government and Other Savings Banks

In a comparatively new country where capital is relatively scarce, it is natural that the banks that finance the business institutions should also absorb the bulk of the people's savings for use in promoting the business of the country. Thus, in Canada the great bulk of the current savings of the people has been found in the savings or notice deposits of the Canadian chartered banks, the annual average figures of which are given in Table 7 of this Chapter, the 1945 average being \$2,750,358,254. This is not so true to-day, when the Government is absorbing a large proportion of current savings for the financing of demobilization and reconstruction. Further, the current savings of the Canadian people are going very largely into the purchase of life insurance, the total premiums paid in the single year 1945 aggregating \$261,243,849. Nevertheless, current savings as shown by deposits in the banks are large, those in the special savings banks, although comparatively small, are none-the-less significant.

There are three distinct types of savings bank in Canada at the present time, in addition to the savings departments of the chartered banks, and of trust and loan companies. First, there is the Post Office Savings Bank, in which the deposits are a direct obligation of the Dominion Government. Secondly, there are Provincial Government savings banking institutions in Ontario and in Alberta, where the depositor becomes a direct creditor of the province. Thirdly, there are, in the Province of Quebec, two important savings banks, the Montreal City and District Savings Bank and La Banque d'Economie de Québec (formerly the Caisse d'Economie de Notre-Dame de Québec), established under Dominion legislation and reporting monthly to the Department of Finance. Other agencies for the promotion of thrift are the co-operative credit unions, which encourage the regular saving of amounts too small to deposit in a bank.

**Dominion Government Savings Banks.**—Prior to 1929 there were two classes of Dominion Government savings banks in Canada, the Post Office Savings Bank under the Post Office Department, and the Dominion Government Savings Bank attached to the Department of Finance. The former was established under the Post Office Act of 1867 (31 Vict., c. 10) in order to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the Dominion to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government Savings Bank proper, under the authority of the Finance Department, were established in the leading cities of Canada under the management of the Assistant Receivers General and at certain designated centres in Nova Scotia and New Brunswick, under managers appointed by the Governor in Council. From deposits of \$1,483,219 at June 30, 1868, increases were registered until 1887, \$21,334,525 being shown at the credit of depositors at June 30 of that year. Commencing about 50 years ago, the individual banks were gradually amalgamated with the Post Office Savings Bank, and at Mar. 31, 1928, bank deposits had fallen to \$7,640,566. The remaining banks finally were amalgamated with those of the Post Office in March, 1929.

### 20.—Deposits with Post Office and Dominion Government Savings Banks, Years Ended Mar. 31, 1918-45

NOTE.—Figures for Provincial Government savings banks are not included. Figures for 1868-1917 will be found at pp. 833-834 of the 1926 Year Book. The Dominion Government Savings Bank was amalgamated with the Post Office Savings Bank in 1929.

**Provincial Government Savings Banks.**—Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta. A similar institution was in operation in Manitoba from 1924 to 1932, when the depositors' accounts were taken over by the chartered banks.

**Ontario.**—In the session of 1921, the Legislature of Ontario authorized the establishment of the Province of Ontario Savings Office, and in March, 1922, the first branches were opened. Interest at the rate of 1 and 1½ p.c. per annum compounded half-yearly is paid on accounts. The deposits are repayable on demand. Total deposits on Mar. 31, 1946, were \$48,037,000, and the number of depositors at that date was approximately 105,000. Twenty-two branches are in operation throughout the Province.

**Alberta.**—In Alberta, the Provincial Treasury receives savings deposits and issues demand savings certificates bearing interest at 1½ p.c., or term certificates for one, two, three, four or five years, in denominations of \$25 and upwards, bearing interest at 2 p.c. for one or two years, 2¼ p.c. for three or four years and 2½ p.c. for five years. The total amount in savings certificates on Dec. 31, 1945, was \$1,148,146, made up of \$333,721 in demand certificates and \$814,425 in term certificates.

In addition savings deposits are accepted at 35 Provincial Treasury Branches throughout the Province. The total of these deposits at Dec. 31, 1945, was \$9,296,718 made up of \$5,246,972 bearing interest at 1½ p.c. and payable on demand, and \$4,049,746 bearing interest at 2 p.c. and payable one year after deposit.

**Penny Banks.**—Provision is made by the Penny Bank Act (R.S.C., 1927, c. 13) for the institution of banks designed to encourage small savings by school children, although their facilities are not confined to children. Such banks are not deemed to be banks within the meaning of the Bank Act, but are savings banks within the meaning of the Winding-Up Act, and their powers are strictly limited. The only bank operating under this statute is the Penny Bank of Ontario.

**22.—Assets and Liabilities of the Penny Bank of Ontario, Years Ended June 30, 1942-45**

<sup>1</sup> Totals include minor unspecified items.  
\$15,000 due under agreement dated Apr. 26, 1932.

<sup>2</sup> Includes \$33,572 investment reserve.

<sup>3</sup> Includes

The Public Schools Act (R.S.O., c. 357, Sect. 89-Y) and the High Schools Act (c. 360, Sect. 25-B) state that the Board of Trustees may provide books, stationery and other materials necessary in connection with the establishment and maintenance of a penny savings bank or any system introduced for the encouragement of thrift and the habit of saving. The great reduction in business since 1942 was due to the decision not to accept any further deposits after February, 1943, for the duration of the War, in order that the school children might concentrate on the purchase of War Savings Stamps and Certificates.

**Other Savings Banks.**—The Montreal City and District Savings Bank founded in 1846 and now operating under a charter of 1871, had on Mar. 31, 1946, a paid-up capital and reserve of \$5,750,000, savings deposits of \$119,464,090, and total liabilities of \$127,091,600. Total assets amounted to \$127,653,116, including over \$105,000,000 of Dominion, provincial and municipal securities. The Caisse d'Economie de Notre-Dame de Québec, founded in 1848 under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855, and given a Dominion charter by 34 Vict., c. 7, had on Mar. 31, 1946, savings

deposits of \$21,120,435, a paid-up capital and reserve of \$3,000,000, and total assets of \$25,494,306. Under the new charter, effective Sept. 1, 1944, the name of this Bank was changed to La Banque d'Economie de Québec.

## Section 7.—Foreign Exchange

### Subsection 1.—Exchange Rates

The Canadian dollar, adopted as Canada's currency in 1857, was equivalent to 15/73 of the pound sterling; in other words, the pound was equal to \$4.866 in Canadian currency at par, and remained so, with minor variations between the import and export gold points representing the cost of shipping gold in either direction, until the outbreak of the War of 1914-18. During the first eleven years after Confederation, the Canadian dollar was at a premium in the United States, as the United States dollar was not, after the Civil War, redeemable in gold until 1878. From the latter date, the dollar in the two countries was equivalent at par, and variation was only between the import and export gold points or under \$2 per \$1,000.

At the outbreak of the War of 1914-18, both the pound sterling and the Canadian dollar were removed from the gold standard, and fell to a discount in New York. However, this discount was 'pegged' or kept at a moderate percentage by sales of United States securities previously held in the United Kingdom, by borrowing in the United States and, after the United States entered the War, by arrangement with the United States Government. After the War, when the exchanges were 'unpegged' about November, 1920, the British pound went as low as \$3.18 and

the Canadian dollar as low as 82 cents in New York. In the course of the next year or two, exchange returned practically to par, and the United Kingdom resumed gold payments in April, 1925, and Canada on July 1, 1926. From then until 1928 the exchanges were within the gold points, but in 1929 the Canadian dollar again fell to a moderate discount in New York. The dislocation of exchange persisted, with the exception of a few months in the latter half of 1930, into 1931. Dollar rates were below the gold export points, however, only for a few scattered intervals.

The 1942 Year Book at pp. 829-830 deals with the pre-war position of Canadian exchange from September, 1931, to the outbreak of War.

At the beginning of the War of 1939-45 sterling and Canadian funds, like those of the other initial belligerents, fell to a discount at New York. The pegged official rates remained unchanged throughout the War. On July 5, 1946, the Canadian Government devalued the United States dollar in relation to the Canadian dollar bringing the latter to parity with the former.

A corresponding adjustment was made to sterling, the rate being established at \$4.02 to the pound.

### Subsection 2.—Wartime Control of Foreign Exchange

**The Foreign Exchange Control Board.**—The wartime controls exercised by the Foreign Exchange Control Board are dealt with at pp. 833-835 of the 1941 Year Book and the modifications of policy during the early years of operation are dealt with at pp. 830-833 of the 1942 edition.

Since the end of hostilities, the Board has published a report covering the main aspects of operations from September, 1939, to the end of 1945, and the following summary is made therefrom.

The basic factor affecting the Canadian exchange position is, of course, the balance of international payments. This subject is dealt with in the External Trade Chapter, at pp. 560-69. The Canadian balance of international payments has been characterized by pronounced instability from year to year. This is the primary cause of wide swings in the exchange cycle and the reason why, during the critical days of the War, gold and United States dollars had to be husbanded so carefully. The need for care still exists and Government machinery for the peacetime continuation of the controls in a modified form will continue to function.

The main wartime effort of exchange control was to maintain sufficient reserves of gold and United States dollars. By January, 1942, Canadian reserves of gold and United States dollars which had amounted to about \$400,000,000 at the outbreak of the War had slumped to \$175,000,000—enough to cover only six weeks' import needs. By the end of 1945, total holdings had been built up to \$1,500,000,000. The principal factors contributing to this result were:—

- (1) Foreign Exchange Acquisition Order (Apr. 30, 1940), which required residents of Canada to sell foreign currency owned by them to the Foreign Exchange Control Board. Gold holdings of the Bank of Canada amounting to \$205,200,000 were also transferred.

- (2) The Hyde Park Agreement in 1941 under which Canada and the United States co-ordinated their war production, Canada supplying the United States with material which it was better adapted to produce. War Supplies Limited, a Crown Company, was set up to handle these sales which totalled more than \$1,000,000,000.
- (3) Special receipts of gold and United States dollars from the United Kingdom totalling \$458,000,000.
- (4) Capital inflow (chiefly the purchase of Canadian securities by United States investors) which became marked in 1942, rose sharply in 1943 when gross sales of outstanding Canadian securities for United States dollars amounted to nearly \$200,000,000 or almost twice the 1942 figure. The 1944 total exceeded \$100,000,000 and that of 1945 exceeded \$200,000,000.
- (5) Grain purchases by the United States amounted to a value of \$550,000,000. These are described as being "another source of United States funds of extraordinary size. Their importance is emphasized when it is recalled that receipts from exports of grain in 1944 considerably exceeded the total value of all merchandise exports to the United States in 1938".

Because of the improved exchange position, it became possible, in 1944, to reduce some of the restrictions upon the expenditure of United States dollars. The first step in this direction was taken in May, 1944, when moderate amounts of United States dollars were made available to residents of Canada for travel for any purpose. The principal change introduced was to permit persons to buy up to \$75 in United States currency for travel for any purpose, but not more frequently than once every six months, or alternatively \$150 once every twelve months. One year later, in May, 1945, further relaxations in the restrictions upon travel were introduced and since that time Canadians have been permitted to buy United States funds for any reasonable travel expenditures. The improved position also made it possible to introduce some flexibility in the control of capital exports in 1944 when certain types of application for United States dollars for the extension of Canadian business activity outside of Canada were approved.

The improved exchange position also made possible the removal of the restrictions on imports from the United States and other non-sterling area countries which had been introduced by Parliament at the end of 1940 when the exchange situation was acute. The prohibitions on certain civilian imports from the United States contained in the War Exchange Conservation Act were removed by the repeal of the relevant sections of the Act in August, 1944. Finally, in the Budget introduced in October, 1945, the War Exchange Tax was abolished.

Up to Dec. 31, 1945, the Board had a total revenue from turnover in foreign exchange during the six years 1939-45, of close to \$100,000,000. Commissions paid to banks, as authorized dealers, on purchases and sales of foreign exchange during this period were close to \$26,000,000. The net over-all profit reported by

the fund and placed in reserve account after allowances for earnings on investments, interest on Government loans, gold transactions, operating costs, etc., was \$49,300,000. By years the figures are:—

<u>Year</u>	<u>Turnover</u>	<u>Commissions</u>	<u>Profit</u>
	\$	\$	\$
1940 <sup>1</sup> .....	16,043,100	4,223,700	8,915,500

<sup>1</sup> From Sept. 15, 1939.

## PART II.—MISCELLANEOUS COMMERCIAL FINANCE

### Section 1.—Loan and Trust Companies\*

The Canada Year Book, 1934-35, presents at p. 993 an outline of the development of loan and trust companies in Canada from 1844 to 1913.

The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. However, summary statistics for 1943 and 1944 of provincial companies have been supplied by those companies and are included in Table 1 in order to complete the statistics for loan and trust companies throughout Canada. It is estimated that more than 90 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with Dominion registered companies. The statistics of Tables 2 and 3 refer only to those companies operating under Dominion charter, except that, beginning with 1925, the statistics of loan companies and trust companies incorporated by the Province of Nova Scotia, and brought by the laws of that Province under the examination of the Dominion Department of Insurance, have been included in Table 3 as well as those for trust companies in New Brunswick since 1934 and in Manitoba since 1938. In 1920 the Dominion Department of Insurance took over the administration of the legislation concerning Dominion loan and trust companies—the Department of Finance had previously exercised supervision of the activities of these companies.

As indicating the progress of the aggregate of loan company business in Canada, it may be stated that the book value of the assets of all loan companies increased from \$188,637,298 in 1922 to \$213,649,794 in 1931, or by 13.3 p.c., but declined to \$189,674,461 in 1944 or by 11.2 p.c. since 1931. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from \$154,202,165 in 1928 to \$254,646,758 in 1944 or by 65.1 p.c. In the former year, the total of estates, trust and agency funds administered amounted to \$1,077,953,643 and in the latter year to \$2,932,708,530.

\* Revised under the direction of G. D. Finlayson, C.M.G., Superintendent of Insurance, Department of Insurance.

**Functions of Loan Companies.**—The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings-department deposits. In the war years from 1939 to 1944 the amount invested in mortgages declined by over \$22,000,000, being practically all accounted for by an increase in the amount of bonds and stocks held. Of the loan companies operating under provincial charters, the majority conduct loan, savings and mortgage business, generally in the more prosperous farming communities.

**Functions of Trust Companies.**—Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits, but the lending of actual trust funds is restricted by law.

**Statistics of Loan and Trust Companies.**—The figures of Table 1 are of particular interest in the case of trust companies. On account of the nature of their functions, they are mainly provincial institutions, their chief duties being intimately connected with the matter of probate, which lies within the sole jurisdiction of the provinces.

2.—Assets and Liabilities of Loan Companies Chartered by the Dominion Government, as at Dec. 31, 1925-44

NOTE.—For the years 1914-24, see p. 913 of the 1937 Year Book. The figures since 1924 appearing here include loan companies chartered by the Government of Nova Scotia, but inspected by the Dominion Department of Insurance. Figures given in this table do not include small loans companies (see Sect. 2 pp. 987-989).

<sup>1</sup> Book value of real estate for companies' use and other real estate.

<sup>2</sup> Includes other assets.

<sup>3</sup> Includes other liabilities to shareholders.

<sup>4</sup> Includes other liabilities to the public.

### 3.—Assets and Liabilities of Trust Companies Chartered by the Dominion Government, as at Dec. 31, 1925-44

NOTE.—Figures for the years 1914-24 appear at pp. 914-915 of the 1937 Year Book. The figures of this table include statistics of trust companies chartered by the following Provincial Governments but brought in the stated years under the inspection of the Dominion Department of Insurance: Nova Scotia, 1925; New Brunswick, 1934; and Manitoba, 1938.

## Section 2.—Licensed Small Loans Companies and Licensed Money-Lenders

There have been incorporated in recent years, by the Parliament of Canada, three companies that make small loans, usually not exceeding \$500 each, on the promissory notes of the borrowers and additionally secured in most cases by endorsements or chattel mortgages. While these companies, under their original charter powers, were permitted to make loans on the security of real estate, that power was withdrawn by the Small Loans Act, 1939.

On Jan. 1, 1940, the Small Loans Act, 1939 (3 Geo. VI, c. 23), passed by the Parliament of Canada, came into force, by which the above-mentioned small loans companies and money-lenders licensed thereunder making personal loans of \$500 or less, are limited to a rate of cost of loan of 2 p.c. per month on outstanding balances, and unlicensed lenders to a rate of 12 p.c. per annum, including interest and charges of every description.

### 5.—Assets and Liabilities of Small Loans Companies Chartered by the Dominion Government, as at Dec. 31, 1933-44

NOTE.—Figures for the years 1928-32 will be found at p. 838 of the 1942 Year Book.

<sup>1</sup> First year Small Loans Act in operation.

<sup>2</sup> Not including balances other than small loans.

<sup>3</sup> Includes \$200,000 bonds, debentures and stock.

<sup>4</sup> Includes \$250,000 bonds, debentures and stock.

<sup>5</sup> Includes taxes.

<sup>6</sup> No unearned income; since from 1940 small loans have been on an earned basis.

<sup>7</sup> Including business other than small loans.

The Small Loans Companies chartered by the Dominion Government show a substantial increase in business for 1944 as compared with the previous year. The number of loans made to the public during the year increased from 144,521 to 162,242 or by 12.3 p.c. and the amount of such loans rose from \$19,328,551 to \$23,684,406. The average loan was approximately \$146 compared with \$134 in 1943. At the end of 1944 the loans outstanding were 107,732 to an amount of \$11,548,308 or an average of \$107 per loan.

**Licensed Money-Lenders.**—In addition to the above-mentioned small loans companies, 50 licensed money-lenders furnished annual statements of their business, showing, for 1944, total assets of \$11,922,641, of which balances of small loans

amounted to \$5,785,003, other balances to \$4,278,952, bonds, debentures and stocks to \$628,339, real estate to \$217,920, cash to \$566,890 and other assets to \$445,537. Liabilities amounted to \$11,922,643, of which borrowed money accounted for \$6,827,168 and paid shares and partnership capital for \$3,113,813. Loans made in 1944 numbered 71,369, totalling \$11,590,943 and averaging \$162, an increase of 8.1 p.c. in number and 11.7 p.c. in the gross amount; at the end of the year there were 51,591 loans outstanding with a total and an average of \$5,785,003 and \$112, respectively. About 41 p.c. of the number of loans made in 1944 were between \$100 and \$200. Further details of this type of business are given in the 1944 report "Small Loans Companies and Money-Lenders Licensed under The Small Loans Act, 1939", published by the Dominion Department of Insurance.

### Section 3.—Sales of Canadian Bonds\*

Previous editions of the Year Book have traced the sales of Canadian bonds through the interesting period covered by the War of 1914-18 and the intervening years to the outbreak of hostilities in 1939. In 1940, the first complete year of the War, total sales were far greater than in any previous year. There was a slight decrease in 1941 but in each of the years 1942 to 1945, sales were successively greater than in any previous year. The 1945 total was 6.6 p.c. higher than that of 1944. Owing to the concentration on Dominion Government loans, the proportion of all other types of financing to the total sales was the lowest on record in 1944. External markets were closed, with the exception of some private refunding which took place in the United States, and the country was faced with the necessity of raising all required funds within the Dominion.

The highlight of the year's bond issues in 1945 came in November with the successful flotation of the eleventh war loan (Ninth Victory Loan). The growth of sales and applications from the time of the First War Loan of Feb. 1, 1940, to the Ninth Victory Loan of Nov. 1, 1945, was as follows:—

<i>Date</i>	<i>Purchases by Individuals</i>	<i>Purchases by Corporations</i>	<i>Total Cash Sales</i>	<i>Applications</i>
	\$'000	\$'000	\$'000	No.
<b>WAR LOANS—</b>				
Feb. 1, 1940.....	132,000	68,000	200,000	178,363
Oct. 1, 1940.....	113,000	187,000	300,000	150,890
<b>VICTORY LOANS—</b>				
June 15, 1941.....	279,500	450,900	730,400	968,259
Mar. 1, 1942.....	335,600	507,500	843,100	1,681,267
Nov. 1, 1942.....	374,600	616,800	991,400	2,032,154
May 1, 1943.....	529,500	779,200	1,308,700	2,668,420
Nov. 1, 1943.....	599,700	775,300	1,375,000	3,033,051
May 1, 1944.....	641,500	763,500	1,405,000	3,077,123
Nov. 1, 1944.....	766,400	751,200	1,517,600	3,327,315
May 1, 1945.....	836,300	732,600	1,568,900	3,178,275
Nov. 1, 1945.....	1,221,342	801,132	2,022,474	2,947,634

Between 1919 and 1940, provincial bond issues were on a much larger scale than formerly, because of the development of provincially owned public utilities and of improved highways. Owing to additional demands on Canada's capital markets, however, the Provincial Governments expressed the intention in 1941 of strictly limiting bond financing for the duration of the War. Consequently, the aggregate of provincial direct and guaranteed bond financing has shown a very decided drop since 1940. The 1944 figure was the lowest since 1919 but 1945 showed an increase of 141 p.c. over the previous year.

\* Revised from information supplied by C. E. Simon, Editorial Associate, the *Monetary Times*.

Sales of the bonds of Canadian municipalities were greater in 1913, towards the end of the 'land boom', than they were in any other year up to 1943, standing at \$110,600,936. Sales in 1930 almost reached the record when they totalled \$109,648,063. In spite of the increased urbanization of the population, however, there was a marked decrease in the annual sales of municipal bonds during the 1930's when municipalities were obliged to set their finances in order and curtail expenditures.

During 1942 and 1943, the new-issue municipal market was characterized by very low volume. Rising employment throughout the Dominion and greatly increased industrial activity has had a marked influence on municipal finances generally. Unemployment relief expenditures were down sharply and tax revenues were increasing. As a result, the municipalities found themselves in a more comfortable financial position and new debentures during the past two years were practically non-existent. In 1944, however, for the first time since 1930, municipal issues topped the \$100,000,000 mark, due not so much to new investments as to refunding operations.

Sales of corporation bonds, which from 1926 to 1930 had averaged over \$357,000,000 per year, dropped to \$23,050,000 in 1932 and to \$5,385,000 in 1933, due to the unfavourable industrial outlook. Since then the trend has been toward the refunding and retirement of bonded debt. The recent War did not create any new volume of corporate borrowings since the costs of plant expansion for war production were borne mainly by the Dominion.

#### 6.—Sales of Canadian Bonds, by Class of Bond and Country of Sale, 1926-45

(From the *Monetary Times Annual*)

NOTE.—Figures for 1904-25, inclusive, are given at p. 921 of the 1933 Year Book. Since 1936 much of the borrowing for the Canadian National Railways has been done directly by the Dominion and since the War the Dominion Government has advanced money to both the Canadian National and Canadian Pacific Railway Companies for the purchase of equipment. For this reason the column heading "Railway" in previous Year Books has been omitted in this table and such small bond issues as have been made by the Canadian Pacific Railway have been included in the "Corporation".

Year	CLASS OF BOND

## Section 4.—Operating Profits of Corporations and Net Income to Stockholders

In the 1945 Year Book at pp. 1029-1032 financial statistics of Canadian corporations were given for the years 1936-43. These statistics were taken from the Statistical Summary of the Bank of Canada. The study of corporation finances has been made by the Bank of Canada since 1936 but in the early years was conducted on a more restricted basis. As the study has advanced the Bank has been able to enlarge the field by the inclusion of more and more companies and thus the results have become more representative. At the pages referred to in the 1945 Year Book the study included 678 companies --those presented below, now cover 686 companies and the revisions have been carried back to the first year of the series, viz., 1936. The figures disclose how the sharply rising level of Dominion taxation has affected the business life of the country. Every effort was made by those responsible for the study to show the aggregate results on a closely comparable basis: the group of companies is wide and includes those of low as well as of high tax status.

The ordinary corporation income tax during the war years and up to Jan. 1, 1947, was 18 p.c. of net profits and there was also a minimum tax on all corporate incomes of 22 p.c. under the Excess Profits Tax Act, making an aggregate flat-rate tax of 40 p.c. During these years and up to Jan. 1, 1946, the Excess Profits Tax took 100 p.c. of profits in excess of 116 2/3 p.c. of Standard with 20 p.c. refundable; since Jan. 1, 1946, Excess Profits taxation has taken 20 p.c. (in addition to the 40 p.c. Standard) in excess of 116 2/3 p.c. of Standard Profits. The Budget of June 27, 1946, provided for a flat rate of 30 p.c. to replace the 18 p.c. and 22 p.c. basic rates and the reduction of the 20 p.c. Excess Profits rates to 15 p.c., as from Jan. 1, 1947.

The net income left to stockholders, including the refundable excess profits tax, which was \$229,000,000 in 1936 and \$289,000,000 in 1939 reached a maximum of only \$310,000,000 in 1942 and in 1944 was actually only \$278,000,000. The cash dividends paid to stockholders were much less in 1943 and 1944 than they were in 1939, although undistributed profits were in consequence so much larger. Depreciation items, which one would naturally expect to be much heavier in view of the intensified operations and the much greater wear and tear on plant, did not show a trend unduly out of line. They did show, however, a gradual upward movement from \$119,000,000 in 1939 to \$194,000,000 in 1942 but decreased to \$160,000,000 in 1944. Part of the increase in the earlier years of the War was accounted for by the increased capital investment in plant during those years. This latter item was \$99,000,000 in 1939 and \$162,000,000 in 1941, after which it showed a decrease to \$100,000,000 in 1944.

### 7.—Financial Statistics Showing Source and Use of Funds for 686 Industrial Companies, 1936-44

(In Millions of Dollars)

NOTE.—The sample includes all those companies with 1941 assets over \$200,000 for which consistent reports were available in sufficient detail for the period 1936-44. This statement, compiled by Bank of Canada, is designed to show net cash received from all sources and paid out for all purposes: revaluations or purely bookkeeping transactions which affect items of the balance sheet, particularly plant, property and equipment, preferred and common stock outstanding and, in a few instances, funded debt, are not reflected in the statement. Figures are for the respective fiscal years ended nearest to Dec. 31 of the year stated.

Item	1936	1937	1938	1939	1940	1941	1942	1943	1944

<sup>1</sup> Includes depletion charges. <sup>2</sup> Includes amortization of bond discount.  
ment relating to tax accruals and other transactions of previous years.

<sup>3</sup> After adjust-

It is seen in Table 8 that income and excess profits taxes, which absorbed an average of less than 18 p.c. of the net taxable profits in the pre-war years 1936 to 1938, increased this proportion to no less than 50.4 p.c. in 1944.

### 8.—Summary of Profit Statistics for 686 Industrial Companies, 1936-44

(In Millions of Dollars)

NOTE.—Compiled by the Bank of Canada. The sample includes all those companies with 1941 assets over \$200,000 for which consistent reports were available from 1936-44. The accounts of certain companies which were available in some or all of these years were not comparable throughout the period and had to be excluded. The material is, of course, subject to all the limitations and qualifications which apply to the basic accounting statements. Figures are for the respective fiscal years ended nearest to Dec. 31 of the year stated.

Item	1936	1937	1938	1939	1940	1941	1942	1943	1944

<b>Net Income Available for Dividends<sup>1</sup>....</b>	<b>229</b>	<b>293</b>	<b>243</b>	<b>289</b>	<b>285</b>	<b>308</b>	<b>291</b>	<b>257</b>	<b>250</b>
Net income paid out in cash dividends.....	184	219	234	223	225	225	209	198	197
Undistributed income (excluding forced savings) <sup>1</sup> .....	45	74	9	66	60	83	82	59	53

<sup>1</sup> For purposes of comparability any special capital charges made against income account in company reports have been added back as well as "contingent" and "general" reserves. Special inventory reserves (amounting to 0.5, 0.7, 0.3, 1.7, 5.4, 10.6, 6.2, 3.5 and 4.8 in the years 1936-44, respectively), whether shown by the company in operating expenses or as an adjustment to earned surplus, have been deducted in arriving at net operating profit. <sup>2</sup> Includes deferred development and depletion provision amounting to 7.8, 10.6, 10.1, 9.6, 10.3, 10.3, 9.8, 8.4 and 6.1 in the years 1936-44, respectively.

The net operating profits before depreciation were almost doubled during the eight years following 1936. Taking 1937 as a normal pre-war year and 1942 as the year of peak war production, there was a gain of 76.5 p.c. Deducting depreciation, investment and other non-operating income, and bond interest the aggregate amount left before taxation showed a gain of 75.8 p.c. but after income and excess profits tax provision the percentage of net income available to stockholders showed only a 5.8 p.c. increase.

The following statement brings together for each of the years covered in Table 8 the proportion of tax to profits made and the trend of net profits. This clearly shows that wartime industry in Canada was not permitted to benefit in the way of profits from the increased value of business that resulted from the War.

Year	Net Profit <sup>1</sup>	Income and Excess Profits Tax Provision <sup>2</sup>	P.C. of Taxes Paid to Profits Shown	Net Profits after Taxes
	\$'000,000	\$'000,000	p.c.	\$'000,000
1936.....	278	49	17.6	229
1937.....	355	62	17.5	293
1938.....	296	53	17.9	243
1939.....	363	74	20.4	289
1940.....	461	176	38.2	285
1941.....	580	272	46.9	308
1942.....	624	314	50.3	310 <sup>3</sup>
1943.....	597	306	51.3	291 <sup>3</sup>
1944.....	560	282	50.4	278 <sup>3</sup>

<sup>1</sup> After depreciation, bond interest and other charges.  
tax portion.

<sup>2</sup> Including refundable tax portion.

<sup>3</sup> Exclusive of refundable

The net income left to stockholders is given in Table 9 analysed by industrial classification. Appreciable increases are shown in a few of the main industries such as, food, pulp and paper and machinery, while not much change is found over the period for such industries as leather, tobacco, printing and publishing and coal and natural gas. Gold mining shows the greatest decrease for the period 1939-45.

## 9.—Net Income by Industrial Classification for 686 Industrial Companies, 1936-44

(In Millions of Dollars)

Subsection 3. Finances of Life Insurance Companies.....	1009		

An introductory statement summarizing the salient features of the legislation covering insurance in general and the fields of Dominion and provincial jurisdiction appears at pp. 844-846 of the 1941 Year Book.

The 1942 Year Book, at pp. 842-846, contains a special article on the developments in fire and casualty insurance in Canada between 1931 and 1940, consequent upon the enactment of the three Insurance Acts of 1932.

### Section 1.—Fire Insurance

In Canada, fire insurance began with the establishment of agencies by British fire insurance companies. These were usually situated at the seaports and operated by local merchants. The oldest existing agency of such a company commenced business at Montreal in 1804. The first Canadian company dates from 1809 and the first United States company to operate in Canada commenced business in 1821. A short account of the inception of fire insurance in Canada is given at pp. 846-847 of the 1941 Year Book.

A feature of the fire insurance business, besides the large percentage of British and foreign companies, is the continued increase in the number of companies that are operating on the mutual or reciprocal plan. These companies, in which all profits or losses are directly received or paid by the policyholders, are making themselves felt as competitive factors in the fire insurance business. (See p. 617 re farmers' mutuals.)

#### Subsection 1.—Grand Total of Fire Insurance in Canada

Of the total amount of insurance effected in Canada during each year, a part is sold by the companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation, but may be allowed to sell insurance in other provinces.

\* Revised under the direction of G. D. Finlayson, Superintendent of Insurance.

In the more detailed analyses of fire insurance in Canada dealt with in Table 2, the statistics cover only the operations of companies with Dominion registration, but, as shown in Table 1, such companies account for approximately 94 p.c. of the insurance in force.

### 1.—Dominion and Provincial Fire Insurance in Canada, 1944

### Subsection 2.—Historical and Operational Statistics of Dominion Fire Insurance Companies

**Historical Statistics of Dominion Fire Insurance.**—The report of the Superintendent of Insurance for the year ended Dec. 31, 1944, shows that at that date there were 270 fire insurance companies under Dominion registration; of these 59 were Canadian, 73 were British, and 138 were foreign companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada—11 Canadian, 13 British and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 78 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

The trend in the average rate payable for fire insurance has been steadily downward, although the increases in fire losses experienced in the years from 1941 to 1945 have had the effect of checking that tendency. The increase in value of insurable buildings and their contents tends to increase fire insurance premiums in spite of the trend of the average rate. Another factor that has tended to increase the amount of premiums during the past few years is that in the years before 1939 fire insurance companies were prohibited under provincial legislation from insuring mercantile or manufacturing risks for terms exceeding one year, but since that time they have been free to insure such property without a term limitation. The figures indicate that this privilege was not taken advantage of to any great extent until 1941.

**2.—Fire Insurance, by Companies Operating under Dominion Registration, 1900-44**

NOTE.—Figures for the years 1809-1899 are given at p. 973 of the 1939 Year Book, and figures for the intervening years from 1901-29 at p. 847 of the 1942 edition.

Year	Amount in Force at End of Year	Net Premiums Received During Year	Losses Paid During Year	Percent- age of Losses to Pre- miums	Gross Amount of Risks Taken During Year	Premiums Charged Thereon	Average Cost per \$100 of Insurance

For some years the Department of Insurance has compiled, from information supplied by the fire insurance companies registered to transact business in Canada, tables of experience as to premiums and losses by 27 classes of risks agreed upon. This experience for the five latest years available is given in Table 4.

4.—Percentages of Net Losses Incurred to Net Premiums Written in Canada by All Companies Operating Under Dominion Registration, by Classes of Risks, 1940-44, with Five-Year Averages, 1940-44.

**Fire Losses.**—Closely allied to the subject of fire insurance is the subject of fire losses. The Dominion Fire Prevention Association publishes, under the auspices of the Dominion Department of Insurance and with the co-operation of the Association of Canadian Fire Marshals, a report of the loss of life and property caused by fire, from which the information shown in Tables 5 and 6 has been summarized. In addition to the data here shown, the report gives such information as: per capita losses by provinces and by type of building, numbers of fires reported, origins of fires, and criminal investigations arising from fires.

In 1945, the per capita loss was greatest in British Columbia, being \$5.55 as against the Dominion average of \$3.46. The uninsured losses amounted to \$10,426,226, or 24.9 p.c. of the total as compared with 25.5 in 1944. The 52,173 fires reported in 1945, with total property loss amounting to \$41,903,020, resulted in 391 fatalities—159 men, 86 women and 146 children.

## 5.—Fire Losses in Canada, 1926-45

NOTE.—For fire losses from 1923-25, see *Statistical Report of Fire Losses in Canada, 1926*, published by the Dominion Department of Insurance. An estimate of losses from 1898-1922 is published in *Statistical Bulletin No. 27 (1922)*, issued by the same Department.

<sup>1</sup> This amount was given as the total loss, no uninsured losses being reported for Saskatchewan in 1938.

## Subsection 3.—Finances of Fire Insurance Companies

The following tables show for recent years the assets, liabilities, income and expenditure of registered companies transacting fire insurance in Canada. The majority of fire insurance companies also transact miscellaneous forms of insurance (casualty insurance) dealt with in Section 3 of this Chapter. Owing to the fact that

it is impossible for such companies to allocate their assets and liabilities and their general income and expenditure among the various types of business transacted, totals only are given here. Table 26, p. 1020 gives similar information for a few registered Canadian companies whose transactions are confined to forms of insurance other than fire or life.

**7.—Assets of Canadian Companies and Assets in Canada of British and Foreign Companies Transacting Fire Insurance, or Fire Insurance and Other Classes of Insurance, 1940-44.**

## Section 2.—Life Insurance

The life insurance in force, in Canada, in companies registered by the Dominion in 1945 was over \$9,751,000,000, an increase of over \$612,000,000 over the figure for 1944. There has been not only an increase in new business, but a greater stability is noticed in business written compared with the depression in early war years. The effect of these factors is reflected in the ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year.

Year	Net in Force at Beginning of Year	Gain in Force for the Year	Per- centage Gain
	\$	\$	
1930.....	6,157,000,000	335,000,000	5.4
1935.....	6,221,000,000	38,000,000	0.6
1939.....	6,630,000,000	146,000,000	2.2
1940.....	6,776,000,000	199,000,000	2.9
1941.....	6,975,000,000	374,000,000	5.4
1942.....	7,349,000,000	527,000,000 <sup>1</sup>	7.2
1943.....	7,920,000,000	614,000,000	7.8
1944.....	8,534,000,000	605,000,000	7.1
1945.....	9,139,000,000	612,000,000	6.7

<sup>1</sup> Excluding \$44,000,000 adjustment arising out of method of reporting juvenile insurance.

At present the amount of life insurance in force calls for annual premium incomes of about \$260,000,000 of which much the larger part is combined with interest earnings and proceeds of maturing investments to make possible the large investments by these companies in the Dominion war issues. It is interesting to note the effects of the War of 1939-45 on mortality rates. Even including war losses, the mortality rate has not greatly changed, not nearly so much as it did during the War of 1914-18. The improvement in civilian mortality in recent years appears to have substantially counterbalanced the additional mortality brought about by war service. The following figures are derived from the annual statements filed with the Dominion Department of Insurance by life insurance companies.

Year	Rate of Mortality per 1,000 Lives Exposed to Risk	Year	Rate of Mortality per 1,000 Lives Exposed to Risk
1913.....	8.61	1938.....	6.42
1914.....	8.41	1939.....	6.44
1915.....	8.66	1940.....	6.59
1916.....	10.45	1941.....	6.77
1917.....	10.85	1942.....	6.85
1918.....	13.90	1943.....	7.15
1919.....	8.08	1944.....	8.03
1920.....	7.93		

### Subsection 1.—Grand Total of Life Insurance in Canada

In addition to the business transacted by life insurance companies registered by the Dominion, a considerable volume of business is also transacted by companies licensed by the provinces. Statistics of these provincial companies have been

collected since 1915 by the Department of Insurance. Table 10 summarizes the volume of business transacted by Canadian, British and foreign life companies and fraternal societies, whether registered by the Dominion or licensed by the provinces.

**Subsection 2.—Historical and Operational Statistics of Dominion  
Registered Life Insurance Companies**

**Historical Statistics of Life Insurance.**—The net life insurance of all companies registered by the Dominion in 1869 was only \$35,680,082, while in 1945 it was \$9,751,040,835.\* The amount per head of the estimated population of Canada has more than doubled since 1923—an evidence of the general recognition of the value of life insurance for the adequate protection of dependents against misfortune. Notable also is the fact that in this field British companies, the leaders in 1869, have fallen far behind the Canadian and the foreign companies.

\* This total does not include fraternal insurance.

# 11.—Life Insurance in Force and Effected in Canada by Companies Operating Under Dominion Registration (Fraternal Insurance Excluded)<sup>1</sup>, 1900-45

NOTE.—Figures for the years 1869-99 are given at p. 958 of the 1938 Year Book, and figures for the intervening years from 1901-29 at p. 855 of the 1942 edition.

<sup>1</sup> For statistics of fraternal insurance, see pp. 1011-1013.  
given at p. 127.

<sup>2</sup> Based on estimates of population  
<sup>3</sup> During 1937 approximately \$85,000,000, and during 1938 approximately \$60,000,000 were transferred from insurance in force in Canada. These amounts represent mainly transfers to business out of Canada of certain reinsurances previously classed as Canadian business. They also include transfers to annuities of contracts providing for combined insurance and annuity benefits or options.

<sup>4</sup> Subject to revision.

Life insurance business was transacted in Canada during 1944 by 41 active companies registered by the Dominion, including 28 Canadian, 3 British and 10 foreign companies; one of these foreign companies was registered only for the acceptance of reinsurance. In addition, there were 9 British and 5 foreign companies registered to write insurance; these had practically ceased to write new insurance.

The operations analysed in the following tables of this Subsection, with the exception of Table 15, cover only those companies under Dominion registration and are exclusive of fraternal organizations and provincial licensees. However, as indicated in Table 10, their operations cover about 95 p.c. of the insurance in force in Canada.

## Subsection 3.—Finances of Life Insurance Companies

The financial statistics of the following tables cover only life insurance companies with Dominion registration and do not include fraternal organizations and provincial licensees. In the cases of British and foreign companies, the figures apply only to their assets, liabilities and operations in Canada but, in the case of Canadian companies, assets and liabilities, income received and expenditure made, arise in part from business abroad.

## 16.—Assets of Canadian Life Companies with Dominion Registration and Assets in Canada of British and Foreign Life Companies, 1940-44

NOTE.—One British company transacting fire insurance in Canada transacts also life insurance in Canada, and inasmuch as a separation of assets has not been made between these two classes, the assets in Canada are not included here, but are included in the assets of British companies shown in Table 7, p. 1001.

<sup>1</sup> Includes expenditure on business outside of Canada.

**Subsection 4.—Life Insurance Effected through Fraternal Benefit Societies**

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 19 gives statistics of life insurance effected with fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to the whole business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries, London; of the Faculty of Actuaries in Scotland; of the Actuarial Society of America; or of the American Institute of Actuaries) and unless the actuary certifies to the solvency of each fund a readjustment of rates or benefits must be made. The statistics in the first part of this table relate to the 14 Canadian societies reporting to the Insurance Department of the Dominion Government, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain Dominion authority precedent to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, while forbidden to accept new

members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies have since obtained Dominion authority to transact business, also some foreign societies that had not previously been licensed by the provinces. Of both classes of society, 30 transacted business in Canada during 1944, 2 of which do not grant life insurance benefits.

<sup>1</sup> Whole business.      <sup>2</sup> Book values. The totals carried into the balance sheets, including some market values of these assets were: \$82,528,753 in 1940, \$83,563,328 in 1941, \$85,137,561 in 1942, \$89,820,188 in 1943 and \$92,222,115 in 1944.

### Subsection 5.—Life Insurance in Force Out of Canada by Canadian Companies Registered by the Dominion Government

Tables 20 and 21 give summary statistics of insurance in force as at Dec. 31, 1944, in currencies other than Canadian, classified by companies and by the currencies in which business was written. The data given here are in Canadian dollars mainly at par rates of exchange for the countries concerned, but there are several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. More than 62 p.c. of all such business in force was written in United States currency and over 22 p.c. in sterling. From another standpoint, over 33 p.c. was written in currency of British countries outside Canada, and over 66 p.c. in currencies of foreign countries.

Canadian life companies operating under Dominion registration had, at Dec. 31, 1944, life insurance in force in countries outside Canada amounting to \$3,677,830,386. As shown in Table 20, insurance in force in currencies other than Canadian amounted to \$3,559,557,476. The difference between these figures is presumably the net amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the British and foreign investments of Canadian life insurance companies as at Dec. 31, 1944, amounted to \$1,171,242,696. Since the business in force in Canada of these companies at Dec. 31, 1944, amounted to \$6,001,984,634, the total business on their books, Canadian and non-Canadian, amounted to \$9,679,815,020. Thus over 37 p.c. of the total business in force was out of Canada.

### 20.—Life Insurance Effectuated and in Force and Liabilities by Canadian Companies (Excluding Fraternal Societies) Operating Under Dominion Registration, in Currencies Other Than Canadian, by Companies, 1944.

**Subsection 6. Grand Total of All Life Insurance in Canada and the Business of Canadian Organizations Abroad**

Table 22 summarizes the business outside of Canada of Canadian life companies and fraternal benefit societies. If to these figures is added the business in Canada of these organizations, as shown in Table 10, the total business, internal and external, of all Canadian life insurance companies and fraternal societies may be obtained. Again, adding the business in Canada of British and foreign companies and fraternal societies, a grand total is obtained of all life insurance in Canada and of the life insurance business abroad of Canadian organizations; this total is as shown in Table 23.

**22.—Business Abroad of Canadian Life Companies and Societies, 1944**

NOTE.—Figures for business in Canada will be found in Table 10, p. 1005.

Section 3.—Miscellaneous Insurance

Since 1875 the growth of insurance business other than fire and life has been steady. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass and steam-boiler insurance—the only four classes of miscellaneous insurance then transacted—was 5, 3, 1 and 1, respectively. The report for the year 1940 shows that miscellaneous insurance in Canada now includes various forms of accident and 24 other classes of insurance transacted by Dominion companies. In 1880, 10 companies transacted business of the miscellaneous kind, but in 1944 such insurance was issued by 262 companies, of which 57 were Canadian, 70 British and 135 foreign; 212 of these 208 companies also transacted fire insurance. In addition, 20 fraternal orders or societies carried on accident and sickness insurance as well as life insurance business and 2 fraternal orders or societies carried on accident insurance only.

Table 24, which shows the division of business in this field between Dominion and provincial licensees, indicates that, as in the cases of fire and life insurance, the bulk of the business (about 88 p.c. in this case) is transacted by companies with Dominion registration.

Since, as indicated above, most of the companies carrying on miscellaneous insurance in Canada also transact fire insurance, their assets, liabilities, income and expenditures for all operations are included in the financial statistics of fire insurance companies given in Section 1, Subsection 3, of this Chapter. Table 26 gives similar figures for the 10 Canadian companies whose transactions are confined to insurance other than fire and life. Similarly, in 1944, there were 3 British and 42 foreign companies whose operations were limited to the same field.

During the war years, automobile insurance showed a favourable experience with a loss ratio of around 45 p.c. This ratio was slightly lower than for the years before war broke out, the result of lessened traffic.

Hail insurance in 1943 had an unfavourable experience which has been continued in 1944: a substantial underwriting loss has resulted.

Marine insurance has shown a very large increase in Canada during the war years and substantial profits have resulted. The results for the years 1941 to 1944, inclusive, are as follows:—

Year	Premiums	Losses	Underwriting Profits
	\$	\$	\$
1941.....	6,011,922	2,781,190	1,694,470
1942.....	14,295,543	7,983,963	3,855,415
1943.....	10,061,059	4,931,286	3,449,873
1944.....	6,754,361	2,173,318	3,242,383

This class of insurance will, no doubt, figure more largely in the business of companies in post-war years, than it did before 1939.

Subsection 3. Private Schools.....	1031	SECTION 4. LIBRARIES.....	1045
Subsection 4. Higher Education....	1032		

According to the British North America Act, education is a function of the Provincial Governments and, therefore, the schools and universities, teacher training and other matters involved in the formal educational field are planned, financed, and controlled by the provinces.

However, in a broad sense, education cannot be limited to merely what is taught in schools and colleges. It is as broad as life and experience itself and, for that reason, this Chapter of the Year Book deals also with such subjects as libraries, art and scientific research. Certain agencies of the Dominion Government, while not in any sense in conflict with the formal field of education ascribed by the Constitution to the provinces, have functions that concern education. Among these agencies are the National Film Board and the Canadian Broadcasting Corporation. Thus, while the Canadian Broadcasting Corporation is engaged more in the field of entertainment and recreation than of education, there are aspects of its work that are properly included in the broader field. These are dealt with at the close of this Chapter and cross references are given to those non-educational features of these agencies that are dealt with elsewhere in the Year Book.

## PART I.—THE FORMAL EDUCATIONAL FIELD IN CANADA

### Section 1.—The Current Situation in Canadian Education

The Canadian education scene in 1946 is characterized by transition and reconstruction, a reorientation of effort towards a peacetime economy at home in a world linked closer together through improved methods of transportation, intercommunication and better tools of learning. Changes are being effected continuously but in such a way as not to interfere with the regular ascent of classes up the

\* Prepared or revised, except for those parts otherwise indicated, by J. E. Robbins, M.A., Ph.D., Chief, Education Statistics Branch, Dominion Bureau of Statistics. This Branch is concerned with compiling and publishing comparable data relating to educational institutions throughout Canada, and to this end co-operates with the Provincial Departments of Education. A list of the publications of this Branch will be found in Chapter XXXII, under "Education".

educational ladder, while veterans are absorbed in increasing numbers to complete their interrupted studies. For veterans who had not completed high-school training, speed-up classes have been provided to prepare them for college entrance. For those who do not wish to enter college, courses have been arranged which prepare their personnel for business or industrial positions, or again provision is made for those wishing to serve an apprenticeship in the skilled trades, etc.

Present changes in Canadian education cannot be considered as a studied attempt to return to pre-war organization which is recognized as being inadequate to solve modern problems. The war period was marked by both progress and retrogression. Of the changes implemented since 1939, those which marked a step forward in education will probably be retained while the retrogressive ones will be eliminated as soon as expedient. The latter included: permission to employ unqualified teachers, short-term normal courses, shortened year for high-school pupils who helped on the farms, etc. On the other hand, increased and improved supervision and a better liaison established between teacher-training institutions and teachers in the field will probably be retained and developed further.

**The Dominion Government and Education.**—Provincial autonomy characterizes Canadian education, with the exception of that for the Indian population. The Dominion Department of Mines and Resources administers education for some 17,000 Indian pupils scattered throughout Canada, and for a smaller number of other children in the Territories beyond provincial boundaries.\*

In 1942, the Vocational Training Co-ordination Act made provision for the continuation of Dominion assistance to technical education, youth training, etc. Operations under this Act are described in Chapter XIX, pp. 759-761.

Another major educational undertaking of the Dominion Government in current years is in connection with rehabilitation of members of the Armed Forces. A review of the program of university and vocational training is given in Chapter XXII, pp. 1068-1071.

**Education in the Provinces.**—As each province is responsible for educational standards within its boundaries, there has always been competition and co-operation between the provinces. In general, this has resulted in a good deal of similarity between the organization of the educational ladders and the curricular offerings of the provinces as well as a general see-saw advance as individual provinces pull ahead temporarily. Such decentralization would appear to have the advantage of breaking the whole into manageable units and providing greater opportunity for consideration of unique local factors. There is some question, however, as to how much authority each provincial department should retain and how much it should delegate to smaller units and what size these units should be. At present, local school boards, or larger unit boards, are responsible for operating the schools. They appoint and discharge teachers; fix salaries; erect, maintain and operate school buildings. Departmental regulations, however, limit the range of eligible teachers, and Boards of Reference specify acceptable grounds for dismissal. Most provinces have established minimum salaries and there are regulations concerning the erection of schools. Courses of study are authorized by the Provincial Departments of Education but allow for some election of subjects in the high-school grades by the teacher and the School Board. Unfortunately, in all but city schools, limitations of

\* A survey of education in the Mackenzie District of the Northwest Territories, by Dr. Andrew Moore, is published in the *Canadian Journal of Economics and Political Science* for February, 1945.

time, equipment and instructors have prevented many schools from taking advantage of this opportunity, and have kept the curricular offerings within the limits prescribed for normal school and university entrance. Composite high schools in the larger centres, and county high schools with or without dormitories, are attempts to remedy this situation. There is a growing need for junior colleges for those who want more than high school but not university work.

In every province schools have been amalgamated for administrative purposes. Establishment of larger units by the consolidation of schools and the abolition of many school districts has been gaining impetus, particularly in organizing the rural districts of Alberta, Saskatchewan and the Peace River area in British Columbia, and in the formation of county units in the Maritime Provinces.

**The Financing of Education.**—Statistical studies have indicated a close relationship between the amount of money expended and the progressiveness of school services. Sparsely settled rural areas on marginally productive lands supporting schools with low enrolment have a high cost per pupil and a high tax rate but can supply few services. On the average, schools able to pay the highest wages will get the best qualified teachers. Ability to pay is one of the limiting factors, and varies greatly from district to district, rural to urban area, and province to province. The larger units now organized have resulted in equalizing the tax burden over the area but have not solved the problem of equalizing the ability to support schools. In an effort to aid the weaker districts, several provinces have set aside equalization funds which are distributed largely according to need. This need is most difficult to determine unless mill rates are known and assessment valuations are uniform; Saskatchewan, for example, has done considerable work in reassessing land to effect such uniformity.

Within the provinces there has been considerable demand for increased grants from the Provincial Governments. Present practice, in this respect, varies considerably from province to province, as does the proportion of provincial income spent on education. Prince Edward Island is unique in that the Legislature provides about two-thirds of the money used for education whereas other Provincial Governments provide from 18 to 36 p.c. of the total. The Maritimes issue salary grants direct to teachers and there has been some tendency to supplement regular grants with grants for specified purposes, e.g., New Brunswick provides additional grants of from 60 to 75 p.c. of the cost of vocational education to encourage schools to organize new classes. Other provinces, through grants, are encouraging the purchase of such equipment as radios, moving picture projectors, etc.

The War gave a new impetus to health education and practical projects connected with it. British Columbia has recently added to their health work by instituting special grants to provide hot noon meals for pupils. Experiments conducted in various parts of Canada indicate that many children are under-nourished and vitamin-starved and that the addition of a hot, nutritious noon meal would do much to improve their health and aid growth.

**Teachers and Teaching.**—No matter how good the organization, how apt the pupil, it is impossible to have good schools without good teachers. A shortage of qualified teachers began shortly after the opening of hostilities and became continuously more acute as more teachers joined the Armed Forces. Many schools remained open only because ex-teachers, most of whom were married women or

willing students, were recruited to man the schools. With the close of the War and demobilization only a small percentage of teachers returned to the classrooms although their positions had been held open for them. The majority either made use of their education credits to take advanced work on their return or found more lucrative posts in the industrial world.

Teachers' salaries increased slowly during the war years and it was not until 1944 and 1945 that they increased more than the cost of living. By 1946, the majority of the provinces had set minimum wages varying from \$800 to \$1,200 for qualified teachers. Rural school teachers' salaries are almost twice what they were during the 1930's.

In an attempt to attract desirable recruits to the teaching profession Alberta has organized all teacher-training under one professional organization connected with the university and leading to a degree in education. Under such organization Normal training and summer-school classes all lead towards an education degree.

The in-training of teachers suffered during the war years but summer schools curtailed or dropped are resuming regular schedules again in some provinces. It is interesting to note that, supplementing the usual classes in methods and physical education, classes are designated as: Guidance, New Curriculum, Enterprise, Education, Recreational Leadership, School Library Organization and Administration, Audio-Visual Education, Workshop in Health, and others. Other valuable innovations are: appointment of visiting supervisors from the Normal Schools to help rural teachers with their problems; libraries which provide free professional books for teachers (see p. 1049); grants from which Normal School students may borrow, etc.

**School Buildings.**—During the depression years of the 1930's few new schools were erected while those already constructed were allowed to fall into a state of disrepair. Then came the war years when scarcity of supplies and lack of skilled help curtailed new construction and any but the most needed repair jobs. During this period certain of the provinces encouraged districts to set aside funds for building and repair when the war ended. However, a pressing demand for housing and the continued scarcity of materials and labour slowed down new construction in the public building field. Nevertheless, there has been considerable planning and a few schools have been erected, in some of which are incorporated radical changes in unit organization to fit them to the modern conception of education and to the embodiment of new principles of construction or use of newer materials.

**Equipment.** Despite past shortages of equipment, such as film projectors, radio equipment, etc., considerable progress has been made in the use of these modern aids. Film depots have been set up in all the provinces, radio programs have been organized in co-operation with the Canadian Broadcasting Corporation for regions for all of Canada and some films and recordings have been made in local schools.

The paper shortage has limited the number of texts and reference books available but many new books on the market are based on a more scientific approach to the needs of the child. A committee of the Canada-Newfoundland Education Association has recommended a course of study for all Canadian schools which, if found acceptable to the provinces, would effect some degree of uniformity and a fuller understanding of Canada as a whole.

**Post-School Education.**—A fair percentage of pupils leave school with little formal education. Several avenues for further learning are open to these young people depending on the standard of education they have reached, their interests and their abilities. These include evening classes in publicly supported high schools, collegiates and colleges, the fees for which are usually little more than nominal. For those who find it more convenient to work at home, extension courses are available from provincial Departments of Education and universities; tuition for these varies but is not excessive. There are also numerous privately supported schools giving post-school courses.

Subjects offered vary widely. Some courses are intended to be of a practical nature having application to the industries in the vicinity while others are given for their cultural value, or are planned for progression in certain avocations such as dressmaking, carpentering or cabinetmaking, etc. Some of the practical courses give instruction in homemaking, rearing children, personnel management, business practice, not to mention arts connected with certain of these subjects.

Private institutions, for the most part, offer such training as is necessary to enter the skilled trades or practical arts—business courses, hairdressing, engineering, etc. A few business firms in Canada have provided courses for their employees by correspondence, school plants or organized conferences. As a contribution to the war effort, the Department of Labour of the Dominion Government provided basic materials and techniques for a number of courses such as job-instruction training, job-methods training, safety training, etc. Reports indicate that these were reasonably effective and should be continued.

To meet other needs, informal groups gather at more or less regular intervals to discuss problems of common interest. Among the more formal of these groups are the Farm Forums and Citizen's Forums. These are sponsored by the Canadian Association for Adult Education and the Canadian Broadcasting Corporation. In these meetings use is made of films, special broadcasts and other discussion aids. (See pp. 1044-1045.)

Attempts to popularize the conception of "The Lighted Schoolhouse" suggest that the schoolhouse should be used as many hours of the day as possible. Some writers go so far as to recommend that the school be used as a community centre. Certain districts in the United States with this in mind have planned classrooms, auditorium-gymnasium, and lunch rooms to serve the community.

**The Canadian Legion Education Services.**—The war activity of the C.L.E.S. came to an end on Mar. 31, 1946. Since that time the Department of Veterans Affairs has been occupied with veterans interests as well as with those of men of the post-war Armed Services.

Provision had been made for the establishment of an education committee of the Canadian Legion in 1938. When war broke out the Legion was prepared to attack the problem of education for the Armed Services, as they realized that the War would call for more individual responsibility and higher educational standards than ever before, and that the process of post-war rehabilitation would be facilitated if some study could be undertaken by the young men and women during their leisure time.

The size of the undertaking, begun by the Legion and later aided by the Dominion Government, may be observed from the following figures. Prisoners of war received almost 100,000 text-booklets, just under 10,000 extramural university

courses, more than 630,000 books and pamphlets, and 230,000 trade journals and other free materials. Correspondence courses reached a total of 92 and enrolled in 1945 just under 60,000 in Canada and Newfoundland and over 20,000 overseas. To supplement this work, 46 planned reading guides, 57 vocational guidance booklets, and rehabilitation courses were prepared, and some 700,000 library books were purchased and distributed. Classroom courses were organized where expedient while discussion groups and education were stressed.

## Section 2.—Schools, Colleges and Universities

This Section summarizes the enrolment in all the educational institutions in Canada which include four types: Dominion Indian Schools, provincially controlled schools, privately controlled schools, and universities and colleges. The provincially controlled schools are, of course, under the Constitution, the most important group and account for about 90 p.c. of the total enrolment shown in Table 1. A system of public elementary and secondary education, financed mainly by local school authorities but assisted by provincial grants, has developed in each province. There are private schools in all provinces (i.e., schools that are not conducted by publicly elected or publicly appointed boards and are not financed out of public money) but their enrolment is not large in comparison with that of the public schools. At the level of higher education, there is a provincial university in each of six provinces and one or more colleges supported out of provincial funds in the remaining three provinces. (Agricultural schools and colleges are dealt with at pp. 203-213 of the 1943-44 Year Book.)

Table 1 gives statistics of enrolment in the four different categories of educational institutions. Dominion Indian schools are treated more fully in Chapter XXXI, Miscellaneous Administration, along with other information on Indian affairs.

<sup>1</sup> 1943 figures; later statistics not available. <sup>2</sup> Schools for the blind, deaf, or mentally defective. These are boarding schools and many of the pupils are from provinces other than the one in which they are at school. <sup>3</sup> Included with "Universities and Colleges"—preparatory courses. <sup>4</sup> Includes also those in the departmental summer schools for teachers in British Columbia, not held at universities or colleges. <sup>5</sup> Includes 306 in Dominion Indian schools for Yukon and the Northwest Territories. <sup>6</sup> Graduates from the College of Education and temporarily certificated teachers are not included. <sup>7</sup> Includes 598 in ordinary day schools for Yukon and the Northwest Territories. <sup>8</sup> Includes 17,000 population for Yukon and the Northwest Territories.

### Subsection 1.—Dominion Indian Schools

The administration of Indian affairs by the Indian Affairs Branch of the Department of Mines and Resources is dealt with in Chapter XXXI.

Educational work carried on by the Dominion Government for the benefit of Indians is now very extensive. In the fiscal year 1944-45, a total of 337 Indian schools were in operation, including 76 residential schools for Indians with an enrolment of 8,865 and 255 day schools for Indians with an enrolment of 7,480 Indian pupils, also 6 combined public and Indian schools with 93 Indian pupils enrolled. The total enrolment of Indian pupils at school has increased from 12,799 in 1915-16 to 16,438 in 1944-45, and the average attendance from 8,080 to 13,165 (63.1 p.c. to 80.1 p.c. of the enrolment). Continuation and high-school work is now being taught in several of the day and residential schools. The amount spent on Indian education in the school year 1944-45 was \$2,156,883.

### 2.—Enrolment and Average Attendance at Indian Schools, School Years Ended 1936-45

NOTE.—Figures for the years 1916-29 will be found at p. 1063 of the 1940 Year Book, and for 1930-35 at p. 929 of the 1942 edition.

Year	Residential Schools		Day Schools		All Schools		
	Enrolment	Average Attendance	Enrolment	Average Attendance	Enrolment	Attendance	
						Number	P.C. of Enrolment
1936.....	8,906	8,061	9,127	5,788	18,033	13,849	76.8
1937.....	9,040	8,176	9,257	5,790	18,297	13,966	76.3
1938.....	9,233	8,121	9,510	5,978	18,743	14,099	75.2
1939.....	9,179	8,276	9,573	6,232	18,752	14,508	77.4
1940.....	9,027	8,643	9,369	6,417	18,396	15,060	81.9
1941.....	8,774	8,243	8,651	6,110	17,425	14,353	82.4
1942.....	8,840	8,283	8,441	5,837	17,281	14,120	81.1
1943.....	8,830	8,046	8,046	5,395	16,876	13,441	79.6
1944.....	8,729	7,902	7,858	5,355	16,587	13,257	79.9
1945.....	8,865	8,006	7,573	5,159	16,438	13,165	80.9

The enrolment by provinces for the year 1944-45 was as follows: Prince Edward Island, 23; Nova Scotia, 398; New Brunswick, 324; Quebec, 1,323; Ontario, 3,852; Manitoba, 2,187; Saskatchewan, 2,339; Alberta, 1,925; British Columbia, 3,650; Yukon, 181; and Northwest Territories, 236.

### Subsection 2.—Provincially Controlled Schools\*

**Enrolment and Attendance.**—Enrolment in provincially controlled schools is given in Table 1 and average daily attendance is shown in Table 3. The average daily attendance figures are more comparable, as between provinces, and probably more significant for most purposes than those of enrolment. These figures have been practically at a standstill, or declining, in most provinces for several years because of the annually decreasing number of younger children entering the schools.

### 3.—Average Daily Attendance in Provincially Controlled Schools, by Provinces, School Years Ended, 1926-44

NOTE.—Figures for years prior to 1911 will be found at pp. 839-840 of the 1932 Year Book, and those from 1911 to 1925 at p. 963 of the 1937 edition.

Year	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total

<sup>2</sup> Subject to

**Age Distribution.**—A record of the age distribution of pupils in the provincially controlled schools of all provinces is presented in Table 4. The ages of boys and girls are not shown separately, and it should be mentioned that there is a definite tendency for boys to leave school at earlier ages than girls.

\* Day and technical schools only.

**Teaching Staffs.**—The teaching staffs of day schools under provincial control in Canada consisted, in 1944, of 74,547 teachers (14,932 males and 59,615 females). Table 5 gives statistics of rates of salary by provinces, except for Quebec for which comparable data are not available. A separate report, "Elementary and Secondary Education in Canada, 1940-43", deals in detail with the classification of teachers, their teaching experience and rates of salary paid.

**Financial Statistics.**—Table 6 presents a comparable statement of the finances of the Boards operating provincial schools so far as this can be done with existing records.

**6.—Financial Support of Provincially Controlled Schools, by Provinces, for Selected Fiscal Years 1926-44**

**NOTE.**—The receipts shown in the following table do not include any amounts raised by loans or the sale of bonds or debentures, as all revenue of this nature must be repaid ultimately with money raised by local taxation. With the exception of the Maritime Provinces, for which the information is not available, the total debenture indebtedness of the schools of each province is given annually, thus showing the net increase or decrease per year. Figures for 1914 to 1925 will be found at pp. 985-987 of the 1936 Year Book and those for intervening years from 1926 in the corresponding table of the 1937-42 editions.

<sup>1</sup> Includes tuition fees where these are recorded.

<sup>2</sup> Includes contributions to teachers' salaries

in the Maritime Provinces and, in New Brunswick, grants made to schools by the Vocational Education Board.

<sup>3</sup> Not available.

<sup>4</sup> Includes the township grant towards the salaries of rural public school teachers. <sup>5</sup> In the rural municipalities of Manitoba about three-fifths of the school support is equalized by a uniform rate levied over the whole municipality and in the greater part of rural Alberta there is equalization over the areas of more than forty school divisions.

**Subsection 3.—Private Schools**

**Private Elementary and Secondary Schools.**—There are numerous private schools in each province doing work similar to that of the ordinary provincially controlled schools, but these are not publicly financed or administered and are not therefore included in Subsection 2, except in Quebec. Table 7 shows their enrolment at intervals from 1921, the year in which the Education Branch of the Dominion Bureau of Statistics commenced the collection of reports from private schools. A directory of the schools is published by the Dominion Bureau of Statistics.

**7.—Enrolment in Private Elementary and Secondary Schools, by Provinces, School Years Ended 1921, 1926, 1931 and 1938-44**

NOTE.—Figures for the years 1932-35 are given at p. 970 of the 1937 Year Book and for 1936-37 at p. 831 of the 1942 edition.

#### Subsection 4.—Higher Education

Detailed and historical statistics concerning universities and colleges, such as enrolment, graduates, teaching staffs, and finances are given in the report "Higher Education in Canada, 1942-44", published by the Dominion Bureau of Statistics.

The academic year 1943-44 affords the final opportunity to observe the status of higher education in Canada under wartime conditions as statistical returns for subsequent years will be affected by the comprehensive educational program undertaken for the rehabilitation of veterans.

Comparable statistics received from 15 universities for the academic years 1939 and 1944 have been compiled to establish the changes in enrolment, migration of students, teaching personnel and financial status that occurred during the period of heaviest enlistment and manpower mobilization and to determine the degree of retrogression resultant to the universities from these two factors.

**Enrolment.**—The net decrease in enrolment of both sexes in the full-time sessions of the larger universities for 1944 compared with that of 1939 was 6.87 p.c. Male students decreased 12.80 p.c., female students increased 6.06 p.c. Certain variations are noticeable when the figures are segregated by geographic districts. The Maritime Provinces experienced a decrease for both sexes; male students decreased by 15.07 p.c., female students by 11.46 p.c. Central Canada district includes the two largest universities and the returns are modified by the larger schools of medicine, engineering and science where maintenance of enrolment was considered essential; male students decreased 11.46 p.c., female students increased 9 p.c. The western provinces reported a decrease of 11 p.c. for male and an increase of 5 p.c. in the number of female students.

**Migration of Students.**—A characteristic feature of higher education in Canada is the enrolment of students from provinces other than that in which the university is located and the number of students who come from other countries. The following statement shows that only a small change in interprovincial enrolment took place in the war years. This may be attributed to the location of schools of

medical science and engineering with courses covering a period of four or more years. Students from the United States dropped appreciably but in all districts except the western provinces the percentage of students from other countries increased.

<i>Location of University</i>	<i>Students—</i>				
	<i>from Local District</i>	<i>from Other Provinces</i>	<i>from United States</i>	<i>from Other Countries</i>	<i>Total</i>
	<i>p.c.</i>	<i>p.c.</i>	<i>p.c.</i>	<i>p.c.</i>	<i>p.c.</i>
Maritime Provinces.....1939	88.66	4.97	4.76	1.61	100.00
1944	92.55	4.23	1.36	1.86	100.00
Quebec.....1939	69.24	19.32	9.34	2.10	100.00
1944	67.52	18.32	5.77	8.39	100.00
Ontario.....1939	88.09	7.48	3.53	0.90	100.00
1944	88.59	8.46	1.59	1.36	100.00
Western Provinces.....1939	98.57	0.74	0.20	0.49	100.00
1944	98.76	0.88	0.12	0.24	100.00

**Teaching Personnel.**—One of the major problems of the universities during the war years was the maintenance of adequate teaching staffs. By 1944 some of the personnel seconded for duty outside the universities to assist in the problems of organization and mobilization had returned to their teaching posts in the universities. To this extent the statistics for teaching staffs in 1944 do not represent the total number of university professors who obtained leave of absence for war service. Returns on staff, made by the universities under review, for the years 1939 and 1944 are as follows:—

<i>Location of University</i>	<i>Total Staff</i>	<i>Absent on War Service</i>
Maritime Provinces.....1939	330	—
1944	297	45
Central Canada.....1939	2,051	—
1944	2,139	306
Western Provinces.....1939	758	—
1944	737	80

The numerical increase noted in some cases is due to the addition of new specialized courses, the acceleration of certain courses and the reorganization necessary to overcome the absence of more experienced teachers.

**Financial Status.**—Current expenditures of the universities under review increased about \$1,500,000 over pre-war years. Student fees represented 34.25 p.c. of current receipts in 1944 and 34.91 p.c. of the similar figure for 1939. The proportion of receipts obtained from provincial grants was 35.42 p.c. in 1944 as against 34.72 p.c. in 1939. The increase in interest-bearing funds and investments was approximately \$13,000,000. The book value of buildings and equipment advanced \$3,700,000.

Expenditures on salaries, collateral with the problem of obtaining qualified instructors, was considerably higher in 1944. The numerical distribution of full-time staff members receiving from \$2,000 upwards per annum was as follows:—

<i>Location of University</i>	<i>\$2,000 to \$2,999</i>	<i>\$3,000 to \$3,999</i>	<i>\$4,000 to \$4,999</i>	<i>\$5,000 or Over</i>
Maritime Provinces.....1939	63	38	9	12
1944	66	39	2	14

## PART II.—OTHER EDUCATIONAL ACTIVITIES

### Section 1.—The Relationship of Art to Education

**Fine Art.**—Fine art appears as an elective subject in the curricula of the Faculties of Arts in a number of the English-language universities, where it may be taken as one subject among five for a year or two. In some, e.g., Acadia University, there are half a dozen or more elective courses. In Mount Allison University and in the University of Toronto there are a sufficient number of courses to allow of taking the Bachelor's degree with specialization in fine art.

There are also Schools of Art, both English and French, not requiring any fixed academic standing for admission, which concern themselves more exclusively with the technical development of the artist. The most widely known of these are:—

Nova Scotia College of Art, Halifax, N.S.

Ecole des Beaux-Arts, Quebec, Que.

Ecole des Beaux-Arts, Montreal, Que.

Ontario College of Art, Toronto, Ont.

Winnipeg School of Art, Winnipeg, Man.

School of Decorative and Applied Art, Vancouver, B.C.

Courses in these schools vary in length with the requirements of the individual student, but may extend over as many as four years.

**The Role of the National Gallery of Canada.\***—The opening words of the 1945 National Gallery Report are an indication of the importance attached by the National Gallery to its educational work. These read: "...The art gallery of to-day is no mere repository of dead civilizations. It functions not for the sake of a small minority but for the whole people. It must be a vital organization, aware of its time, seizing upon every opportunity to participate in public education".

The work of the National Gallery has many facets. Gradually having widened the scope of its activities, the Gallery to-day plays a vital role in the complex system of adult education and at the same time acts as a valuable adjunct to primary, secondary and even to college systems of instruction.

Founded in 1880 by the Marquis of Lorne, the National Gallery at first served as an exhibition gallery. Provided with an Advisory Arts Council in 1907 and incorporated under a Board of Trustees in 1913, the Gallery has been assembling its permanent collection largely during the past 40 years. Though this was only the beginning, a collection of pictures and sculpture representing the styles of past and present of various parts of the world was recognized as invaluable in terms both of the public's enjoyment and of study for the improvement of arts and industrial products. More than that, however, it was a necessary basis for any program of education. The collection of the National Gallery to-day is of international fame. It is, moreover, accessible to the whole nation by means of the published catalogue, and the sale of photographs and colour reproductions. The Canadian section, naturally the most inclusive, is the best available source for the study of Canadian art.

Meanwhile the newer function of general education has grown up. The National Gallery has pioneered in the assembling and circulation of exhibitions over a very large territory. To-day travelling exhibitions of the arts of Canada and other countries are shipped throughout Canada under the auspices of the National Gallery. Fifteen such exhibitions, including those of the several chartered art societies, are now being circulated. Art galleries, schools and other responsible organizations in various regions draw annually upon the services of the Gallery as the source of most of their offerings to the public. Recent developments have led to the fitting of new community centres into this scheme, and these in turn send exhibits (their own and those from the National Gallery) to smaller communities in their districts. An instance is at London, Ont., where the regional circuit includes Kitchener, St. Thomas, Ingersoll, Chatham and other centres. Loans of pictures from the National Gallery to small or new museums have had much the same beneficial effect as the travelling exhibitions. In these ways actual works of art are constantly being brought to the

\* Prepared under the direction of H. O. McCurry, Director, National Gallery of Canada.

attention of the people throughout the entire country and much more will be done after the development of an integrated system of community centres throughout the Dominion. No place need be too small or remote to profit from current exhibitions.\*

The National Gallery has devised certain methods of education in the arts which apply more specifically to young people and are designed, in part, to supplement regular school work and aid the teacher. The Gallery has co-operated with, advised and provided material for schools and colleges throughout the country. Written lectures illustrated by lantern slides on all fields of art history have long been available for loan to all parts of Canada; reproductions of pictures, with introductory texts for art appreciation, and photographs have also been offered for loan; classes for school children at the Gallery, exhibitions of children's work, conducted tours of the Gallery's collections and educational demonstrations have been features of the program for a number of years. In addition, the National Gallery holds public lectures at Ottawa, Ont., and lecture tours throughout Canada are arranged from time to time.

Some interesting newer techniques of education have also been utilized. A series of school broadcasts entitled "Adventures in Canadian Painting" was inaugurated in 1945 and continued in 1946. These programs on the lives and work of Canadian artists are heard from coast to coast through the co-operation of the Canadian Broadcasting Corporation and aim at telling the story of Canadian art in such a way as to awaken the interest of young people. An essential part of each program is a reproduction of a picture in the National Gallery supplied to the pupil at a nominal price. About 120,000 pictures are distributed each year.

The use of the motion picture is familiarizing school children and the general public with the work of Canadian artists; for instance, the colour and sound film, *Canadian Landscape*, made in conjunction with the National Film Board, features the work of modern Canadian artists against a historical background of landscape painting in Canada since Krieghoff. The silk screen prints by Canadian artists, already famous in many parts of the world as the result of their distribution to the Armed Forces of Canada and the Allies, have now been made available to schools and the public generally. These and other reproductions (see the Gallery's publication, *Reproductions on Sale and Loan Collections*) are now in considerable demand in Canadian schools.

At the university level the National Gallery co-operates with university departments of art and art history. An important new channel of information on Canadian art, including the teaching of art, is furnished by the magazine *Canadian Art*, in the organization of which the National Gallery has taken a leading part.

In these ways the National Gallery has been fulfilling the terms of its charter which assigns to it not only the care of the collections but also "the encouragement and cultivation of . . . artistic taste and Canadian public interest in the fine arts, the promotion of the interests generally of art in Canada". It has been assisted in this endeavour by the attitude of the people of Canada, who are already recognizing the important part that art can play in the complex civilization of to-day, by providing a means of communication between people, by filling the individual's leisure time to his own enjoyment and mental growth, and by advancing the country's material welfare through the improvement of the industrial arts.

\* A complete list of art museums, societies and schools is available in the *American Art Annual* (New York, 1945), pp. 285-298.

**Museums and Art Galleries.**—At pp. 1025-1026 of the 1939 Year Book a list of the museums (including art galleries) in Canada employing full-time staff is published, showing floor space and average daily attendance at each. There has been no official detailed report published by the Dominion Bureau of Statistics on this subject since 1938. In 1945, however, a complete list of art museums, societies and schools in Canada was published in the *American Art Annual* (New York).

## Section 2.—Scientific and Industrial Research in Canada

The field of scientific research in Canada is too broad to cover in detail in each edition of the Year Book and since all research work, whether government or private, is co-ordinated in the National Research Council, a description of the development and work of the Council appears as standard material. During the war years, 1939-45, some deviation from the regular procedure was necessary but in this, the first post-war edition of the Year Book, the regular practice is again being followed.

Research work is carried on by the Departments of Agriculture, Mines and Resources, Fisheries, the Board of Grain Commissioners and the Dominion Observatories. These bodies have trained permanent scientific staffs for investigation and research in their own fields such as soil problems, crops, breeding and testing of animals, processing and marketing, extractive and physical metallurgy, silvicultural and forest products, hydrography, ocean and mollusk fisheries, etc.

The Board of Grain Commissioners employs a staff of seven chemists and 21 assistants in the main research laboratories for milling, baking, malting, etc., while the Dominion Observatories carry out research in the fields of solar physics, astrophysics, seismology, terrestrial magnetism, gravity and other studies.

Universities often show bold initiative in exploring the field of scientific research but with the limited facilities at their disposal the task of carrying their discoveries to a conclusion is not always easy. Government and industrial laboratories are often able to pick up and carry on where the universities leave off.

A special field of research is also being performed by the Research Foundations. The Ontario Research Foundation, established in 1928, has conducted its activities in four buildings adjoining Queen's Park, Toronto, Ont. The object of the Foundation is to provide an independent non-profit-seeking scientific organization available to the public and to industry for assistance in matters of a technological character.

The Banting Research Foundation is used to support the work of the Banting and Best Chair of Medical Research in the University of Toronto and to aid medical research throughout Canada.

The Rockefeller Foundation has given assistance to various agencies in Canada for the purpose of furthering scientific research in medical science, natural science, social science and public health.

A detailed account of scientific and industrial research in Canada is given at pp. 970-1012 of the 1940 Year Book. Reprints of this article, brought up to date (1945), may be obtained from the Bureau of Statistics, Ottawa, price 15 cents.

**Subsection 1.—The National Research Council\***

Encouragement of scientific research on a national basis has been one of the continuing functions of the National Research Council of Canada. From its inception in 1916, the Council has maintained a system of post-graduate scholarships for the assistance of students who have shown promise of research ability. These scholarships have also provided a measure of aid for the development in Canada of trained scientific personnel to meet the academic and industrial needs of the nation in the prosecution of fundamental and applied research. Nearly 1,600 graduate research workers have been trained by this means.

A further measure of assistance has been given through financial grants-in-aid to Heads of Science Departments in Canadian universities who have been enabled thereby to provide facilities for research that holders of post-graduate scholarships and other advanced students could do in various fields.

**Development of the National Research Council.**—From temporary laboratories established after the Research Council Act, 1924, permanent National Research Laboratories were established at Ottawa, Ont., in 1932 with Divisions of Applied Biology, Chemistry, Mechanical Engineering, and Physics and Electrical Engineering. These Laboratories were constructed and equipped primarily to carry out research on general subjects of national interest which universities and industrial laboratories could not be expected to undertake. Provision was also made for work of a fundamental nature in pure science in order that some contribution might be made by the staff in these basic fields.

At the outbreak of war in 1939 practically every university and industrial laboratory in Canada offered its facilities to the Government and the story of how these laboratories and staffs were welded into an informal but highly effective co-operative association is a tribute to the organizing capacity of Canadians and to their voluntary collaboration in time of war. The war history of the National Research Council is in preparation but the work is not yet sufficiently advanced to permit of a comprehensive review being given at this time.

The scope of the Council's activities broadened considerably during the War. The establishment of new laboratories in various centres and the assignment of projects to university and industrial laboratories enabled the Council to promote co-operation in research on a scale never previously attained in Canada. As a result of these combined efforts during the War, a firm basis has been laid for continued collaboration in times of peace by all the participating institutions. Thus, an important step in the co-ordination and promotion of research has been taken.

The Chairmanship of the Committee of the Privy Council on Scientific and Industrial Research is now held by the Minister of Reconstruction and Supply and the National Research Council was transferred from the Minister of Trade and Commerce to his jurisdiction in 1946. This brings the National Research Council into close touch with the problems of the reconstruction period and enables the laboratories to contribute directly to the reconversion program.

Speaking in the House of Commons on May 27, 1946, the Minister said: "The Government has decided that the peacetime needs for scientific research in Canada require that the activities of the Research Council be maintained on the same order

\* Prepared under the direction of C. J. Mackenzie, President, National Research Council.

of magnitude as in war . . . (with) very sizable expenditures on atomic energy activities which are directed by the President and Administrative Officers of the Council".

Parliament is also providing for the establishment of Crown Companies to carry out projects on which research has been done in the National Research Laboratories.

The President of the Council acts as adviser to the Government on an increasing number of scientific subjects, sits on a large number of boards and committees of a general character, is Director-General of the Research and Development Branch of the Department of Reconstruction and Supply, and also acts as special adviser and consultant in connection with military research. To cope with these greatly increased administrative duties as compared with the organization of the Council in earlier years, measures are being taken in 1946 to provide for additional administrative staff including a Vice-President (Administration) and a Vice-President (Scientific).

Compared with the staff of 300 in 1939, the full-time civilian staff of the Council will number about 1,500. In addition to the one large laboratory building of 1932, the Council is now operating 16 other laboratories located at Ottawa, Ont., Montreal, Que., Chalk River, Ont., Winnipeg, Man., and Saskatoon, Sask., and plans have been drawn for several others, including a building research laboratory, a road research laboratory and a radio and radar laboratory.

**War Achievement and Post-War Program.**—While much of the work of the National Research Council during the War was on the secret list and, therefore, not available for publication, there has been a gradual release in 1945-46 of data and descriptive matter in regard to some of these projects. Activities of the National Research Council during the war years are given in the Introduction of the 1942, 1943-44 and 1945 Year Books. Among these were investigations relating to atomic energy; information on radar research; notes on the design and construction of a plywood tailless aircraft, which was ready for flight trials at the end of 1945; and the development to the pilot-plant stage of a process for the separation of butylene glycol from wheat.

Reconversion to peacetime practice was carried forward during 1945 as the end of war became a certainty. Gauge inspection work that had been a major activity in co-operation with the Inspection Board of the United Kingdom and Canada was brought to a close in September, 1945.

A Building Research Conference reviewed the situation in the housing and construction field and laid plans for the co-ordination of studies and the initiation of practical schemes for the improvement of housing in all its branches including construction, plumbing, heating, lighting, ventilation and, perhaps as important as any, the proper planning of housing projects with regard to their economic and social aspects. This work is being closely integrated with the activities of the Department of Reconstruction through the Research and Development Branch.

Research work for the three Services—Navy, Army and Air—continued throughout the year but on a gradually slackening basis towards the end of the War. Much of the work undertaken for the Services as a war measure will be continued in peacetime but with industrial and commercial application to civilian rather than military requirements.

Such activities will include applications of radar as aids to air and sea navigation, the continuance of many medical researches on the control of infectious diseases, and other subjects of general interest. Studies will also be continued in work on the heat-retaining values of textiles used in clothing, shrink resistance of woollens, particularly socks, wearing quality of leathers and leather substitutes used in boots, and many other items.

Aeronautical investigations include work on aircraft performance, engines and fuels, instrument design and testing, and a multitude of other problems. Electrical engineering, acoustics, heat and light, X-ray analyses, electrical measurements and standards are fields of physics that have seen wide application during the War and that will now be turned to the improvement of apparatus, equipment and devices for the betterment of housing conditions or the improvement of commercial industrial products.

Increased attention is now being given to fundamental scientific studies, many of which can be carried on to best advantage as parts of a well-integrated program in co-operation with the universities. During the War, substantial progress was made by the National Research Council in the co-ordination of research looking to the greatest possible use of all available laboratory facilities throughout the Dominion. One of the major studies in the development of new and extremely powerful explosives was a co-operative project in which almost 100 investigators, working in universities and industrial laboratories scattered across Canada carried out researches on specific parts of a single program in which the National Research Council had both a contributing and co-ordinating function.

Similar applications in peacetime will ensure sound progress in research and yield high returns on problems that are known to be part of important national undertakings.

The influx of veterans in large numbers into the universities imposes a very heavy teaching load on science departments and reduces the time available for research but, on the other hand, veterans who are graduates are also returning to the universities for further training in research and will thus form the nucleus of new research teams that can be put to work wherever adequate facilities are available.

**Inter-Empire and International Co-operation.**—Inter-Empire and international relations in science are fostered by the Council and similar organizations in Canada and the freedom with which scientific information is exchanged bodes well for the continued development of fundamental studies and the application of science to industry and commerce.

A close liaison arrangement has been established with Washington, D.C., where the National Research Council maintains a Liaison Officer; the Council also has a Liaison Officer attached to Canada House at London, England.

**Aid to Industrial Research.**—It is encouraging to note that many of the leading industries in Canada which formerly depended on outside sources for their research information and advice are now establishing research laboratories of their own and staffing them with men who have been trained in Canada. In many cases former employees of the National Research Laboratories now hold important research posts in Canadian industrial concerns.

In the prosecution of industrial research, aid is being given by other organizations such as the Research Council of Alberta at Edmonton, and the British

Columbia Scientific and Industrial Research Council with headquarters at Vancouver, B.C. The National Research Council co-operates fully with all organizations of this kind in the planning of research on a national basis in order that there may be the least possible amount of duplication and the greatest exchange of information among scientific personnel in these institutions and the universities.

### Section 3.—The Educational Functions of the National Film Board and of the Canadian Broadcasting Corporation

**The National Film Board.\***—This Board serves the Canadian people by means of visual interpretations over Canadian screens of phases of their country's life and culture; its social problems; its national resources and industries; and its achievements in art, science, research and medicine. It serves Canada abroad by picturing Canada to the peoples of other lands, and it brings to Canadians many aspects of international affairs which are of public interest.

Since its creation in 1939, through the passing of the National Film Act, the Board has included in its activities the production and distribution of 35mm (theatre size) and 16mm (non-theatre size) films, as well as graphic material, filmstrips and displays. During the year ended Mar. 31, 1945, 308 short films were produced.

The Board is made up of two Ministers of the Dominion Government, three senior civil servants, and three members of the public chosen for their interest in and knowledge of the film as an instrument of public policy. The chief executive officer is the Film Commissioner whose responsibility it is to direct, advise upon, and co-ordinate Government film service in Canada. The Board is established as the agency for the production and distribution of films for all Departments of the Government.

Among those branches of the Government for which the Board has produced films and other visual material are the Departments of National Defence (Navy, Army and Air Force), the Department of National War Services, the Wartime Information Board, Canadian Information Service, the National War Finance Committee, the Wartime Prices and Trade Board, the Department of Munitions and Supply, the Department of Reconstruction and Supply, the Department of Agriculture, the Department of Mines and Resources, the Department of Labour, the National Research Council, the Department of Trade and Commerce, the Department of Fisheries, the Department of National Health and Welfare, the Department of Veterans Affairs, the Department of Finance, and the Bureau of Statistics.

Although it issues two 35mm films each month in the *Canada Carries On* and *World in Action* series which enter the theatres on an ordinary commercial basis, more than half the Board's production is devoted to the 16mm (non-theatre) field, a project that has the support and co-operation of all Provincial Governments, trade unions, co-operatives, and national associations across the country.

Backbone of urban 16mm distribution are the film libraries that have been established throughout the nine provinces by local bodies such as public libraries, Normal schools, Provincial Departments of Education, university extension departments and, more recently, Community Film Councils. Here, films may be secured for a nominal service charge by any interested party, individuals or organizations.

\* Prepared under the direction of Ross McLean, Acting Film Commissioner, National Film Board, Ottawa.

In 1939, 15 of these libraries were in operation. To-day there are 73 libraries, 29 of which were established in 1945 alone. The majority of Canadian communities with a population of more than 5,000 have their own film libraries.

The showing of special programs of films to workers in factories and at trade-union meetings is a feature of urban distribution. The labour-union project is sponsored jointly by the Canadian Congress of Labour, the Trades and Labour Congress of Canada, the Workers' Educational Association and the National Film Board. Special discussion trailers and study material accompanying each film are distributed to the labour unions. These trailers have been found very successful in stimulating audience discussion. Average monthly attendance at union showings is 30,000; factory audiences total 90,000 monthly. Similar special services are being developed for industry, women's organizations, scientific and engineering groups, health and medical bodies, and other specialized fields.

Introduced as an experiment in January, 1942, the original 30 mobile units, whose job was to bring regular monthly film programs to rural audiences, have now increased to a total of 92, reaching an average audience of 250,000 per month. Careful and specialized planning of these rural programs, together with the use of discussion booklets for teachers and group leaders, relate them closely to the work and interests of the communities that they serve. Through their co-operation with the wheat pools, extension departments of universities and Provincial Departments of Education, the Board's rural representatives have come to be regarded as valued servants of the community.

Films have helped to clarify Canada's position in the international scene at such outstanding world gatherings as the Food and Agriculture Conference at Quebec, the San Francisco Conference, the International Labour Organization Conference at Philadelphia, the UNRRA Conference at Montreal and the Quebec Conference.

**Education by Radio.\***—Radio is playing an increasingly important role in the education of both children and adults. The Canadian Broadcasting Corporation devotes a large portion of its broadcast time to programs of an educational nature, for both English- and French-speaking listeners. The objective is a good balance of information and education on the one hand, and entertainment and showmanship on the other. Wherever possible, these factors are combined.

*School Broadcasts.*—In co-operation with Provincial Departments of Education, special programs related to the courses of study are broadcast to classrooms.

During the past season, the CBC prepared and financed 25 "National School Broadcasts", including dramatized stories of Canadian cities, addresses on citizenship by prominent Canadians, high-school student forums on democracy, and broadcasts on the lives and work of Canadian artists. Several programs were exchanged with the United States Columbia Broadcasting System "School of the Air". A feature program of the school broadcast series, viz., the CBC presentation of Shakespeare's *Julius Caesar* was one of five CBC programs receiving recognition from the Institute for Education by Radio at Ohio State University. School broadcasts on the French network were heard under the title "Radio-Collège". Several programs of this series are being sent to Europe through CBC International Service at the request of the United Nations to help fill the need for new educational material there.

\* Prepared under the direction of the General Manager, Canadian Broadcasting Corporation.

*Adult Education.*—Programs for adult education are presented on all networks in a variety of talks, commentaries, interviews, discussion periods, and semi-dramatized programs on a wide range of subjects. The program "Citizens' Forum", with its French network counterpart, "Préparons l'Avenir", is a good example of the discussion type. Citizens' Forum originates at public meetings, where major questions of public interest are discussed. It is produced in co-operation with the Canadian Association of Adult Education, which has organized listening and study groups across the country. This Association, with the Canadian Federation of Agriculture, helps in the preparation of another series—"National Farm Radio Forum"—on which farmers from all parts of Canada are able to exchange views and problems.

Other series presented involve subjects in semi-humorous, easy-to-understand fashion and all networks carry a series of programs of veterans' rehabilitation problems. Special programs for women, in both English and French, offer practical information on food conservation, consumer buying, home dressmaking, health, housing, recreation and child-care. In connection with the annual series "School for Parents" and "L'Ecole des Parents"—charts of family needs were distributed. The series "Mother's Business", provided an opportunity for mothers to give their own practical views on building a happy home life.

*Music and Drama.*—The first full-length Canadian opera commissioned by the CBC "Deirdre of the Sorrows", was produced in the 1945-46 season, and was hailed as a major event in Canadian music. Musical series brought to listeners the stories behind major orchestral works, and the number of broadcasts by Canadian symphony orchestras was increased. Many rising young Canadian musicians were introduced in special recital programs, and two series, "Stories in Music" and "Music Makers", were prepared for children. CBC dramatic presentations continued to provide opportunities for Canadian authors and actors to develop themes on Canadian life.

## Section 4.—Libraries

The Dominion Bureau of Statistics publishes biennially a Survey of Libraries in Canada; the latest edition lists public, university, government and other special libraries, showing the location, size, etc., of each. The latest report issued is the Survey for 1942-44 which contains detailed information on library service for 1943.

**Public Libraries.**—Public libraries in Canada are primarily urban institutions. In cities of over 10,000 population about 92 p.c. of the people have some measure of library service and in smaller urban centres the proportion is 42 p.c. While only 5 p.c. of the rural population is at present provided with library service, the recent interest being shown in rural library service provided by regional and travelling libraries promises to alter this situation in the near future. In interpreting the provincial statistics of public libraries, it should be kept in mind that in the predominantly rural provinces like the Maritimes and the Prairie Provinces urban libraries cannot serve more than one-third of the population, while in the more urban provinces of Ontario, Quebec and British Columbia it is possible for them to serve nearly double that number. Other types of library, figures for which are not included with those of public libraries, provide more of the public's reading material in some provinces than in others. For instance, parish libraries in Quebec numbered 332 in 1941 (the latest year for which figures are available) and served 1,008,415

parishioners. In other provinces there is no record of church or parish libraries, although they are known to be fairly numerous. Commercial lending libraries are also an important source of reading, especially of fiction, but no statistical information has been collected of these since the Census of 1931. Consideration should also be given to private libraries of the home and, since no record of them is possible, it is necessary to consider the statistics of public libraries as the record of a certain type of institution rather than as a complete record of the libraries to which the public has access. Individual libraries for 1943 may be classified by the following population units, according to the returns of the 1941 Census.

### 1.—Distribution of Public Libraries by Population Unit, 1943

Population Unit	Cities and Towns	Towns and Villages	Rural <sup>1</sup>
	No.	No.	No.
Under 1,000.....	—	211	222
1,000–4,999.....	—	176	19
5,000–9,999.....	—	46	4
10,000–19,999.....	27	—	—
20,000–39,999.....	20	—	—
40,000–99,999.....	8	—	—
100,000 or over.....	8	—	—

<sup>1</sup> Size of unit based on the Annual Report of the Ontario Department of Education and of the British Columbia Library Commission.

Included in these groups are some 300 “one-man” libraries, and an additional 100 staffed entirely, or mostly, by volunteer workers. Some of the latter are conducted by members of religious orders and a larger proportion of them by members of local organizations.

### 2.—Summary Statistics of Public Libraries, by Provinces, 1943, with Totals for Alternate Library Years 1931–41

Year and Province	Volumes	Circulation	Registered Borrowers	Expenditure on Books, Periodicals and Repairs	Total Expenditure
	No.	No.	No.	\$	\$
Totals, 1931.....	4,516,206	21,135,354	1	509,322	1
Totals, 1933.....	4,770,981	22,376,340	1,114,201	421,142	1

British Columbia.....	371,932	1,836,906	114,995	67,250	251,578
Yukon.....	12,878	12,616	279	611	2,152
Totals, 1943.....	5,681,291	20,056,093	1,105,990	609,174	2,481,988

<sup>1</sup> Not available.

In the larger centres the main libraries are conducted as municipal institutions usually by a board appointed by the city or town council. The more numerous smaller libraries are conducted by voluntary associations. Small provincial grants are given to libraries of both types in most of the provinces, but not in New Brunswick, Quebec and Manitoba. There is a provincial centre for the direction and encouragement of public-library development in the Public Libraries Branch of the Ontario Department of Education, and in the Public Library Commission of British Columbia. This seems to be one of the most effective means of assisting the library movement; public-library service is more complete in Ontario and British Columbia than in other provinces. Prince Edward Island now possesses a centre in the headquarters of its provincial library, and Nova Scotia in its recently founded Regional Libraries Commission.

*Circulation.*—The circulation of books in the Dominion is confined to about 40 p.c. of the population and averages about five books per person per year. It is estimated that about one-quarter of the patrons of libraries are children, which is approximately the same proportion that school enrolment bears to the total population of the country.

### 3.—Summary of Circulation Reported by Public Libraries in 1943

Province or Territory	Adult Fiction	Adult Non-fiction	Juvenile	Un-classified	Total	Registered Borrowers
	No.	No.	No.	No.	No.	No.
Prince Edward Island.....	114,348	32,429	80,462	Nil	227,239	20,889
Nova Scotia.....	53,335	9,259	15,290	89,913	167,797	12,159
New Brunswick.....	111,325	34,477	27,319	50,269	223,390	21,891
Quebec.....	289,009	122,069	153,602	240,765	805,445	44,485
Ontario.....	6,249,090	2,571,824	4,505,210	126,361	13,452,485	719,988
Manitoba.....	355,176	161,855	233,800	19,472	770,303	44,043
Saskatchewan.....	514,819	149,328	260,500	77,694	1,002,341	58,036
Alberta.....	668,797	221,079	577,976	89,720	1,557,572	69,225
British Columbia.....	761,256	424,674	372,074	278,902	1,836,906	114,995
Yukon.....	3,048	Nil	1,200	8,368	12,616	279
<b>Totals.....</b>	<b>9,120,203</b>	<b>3,726,994</b>	<b>6,227,433</b>	<b>981,464</b>	<b>20,056,094</b>	<b>1,105,990</b>

An analysis of the circulation of non-fiction books indicates that, among communities of different size, persons living in the larger communities read more philosophy, and those living in the smaller communities more religion. Sociology and the arts are studied to a greater extent in the larger communities (except where there are regional libraries), while the smaller centres are high in literature, history and travel. Biography is popular everywhere; next to travel books, it is on the whole the most popular class of non-fiction.

*Receipts and Expenditures.*—More than 79 p.c. of the total expenditures for 1943 were the responsibility of the larger cities. The column headed "Local Taxes" contains about 2 p.c. from school boards, townships, counties or rural municipalities. The balance is from local assessment by the municipal councils.

#### 4.—Receipts of Public Libraries, Library Years Ended 1943, with Totals for 1937, 1939 and 1941

<sup>1</sup> Recent legislation in Quebec provides for the establishment and maintenance of a Provincial Library in Montreal, and provincial assistance to Quebec City for the establishment of a municipal library. In addition to the above provincial expenditures of \$23,350 there was a grant of \$29,577 for capital expenditures to Saint Sulpice Library at Montreal, and \$15,000 for the city of Quebec, in the fiscal year 1943-44.

Municipal assessment rates for public libraries generally are not fixed by provincial legislation. The distribution of expenditure advocated is from 50 to 55 p.c. for salaries; 25 p.c. for book stock, including binding and repairs; and the balance for other items of maintenance. This procedure is followed closely by all cities.

#### 5.—Public Library Expenditures, Library Years Ended 1943, with Totals for 1937, 1939 and 1941

**University and College Libraries.**—The statistics summarized in Table 6 represent returns from 168 university and college libraries for 1943. Comparatively few such libraries keep circulation statistics. The use of the libraries for reference and critical reading by the students makes the circulation statistics of little value as a standard of measurement. In the two years previous to 1941, the increase was 300,000 volumes, but in the period 1941-43 the increase was only 40,000. This discrepancy was due to the difficulty of obtaining suitable books during the latter years of the War.

<sup>1</sup> Information not available.

**Government Libraries.**—Returns from the Dominion and Provincial Government libraries include the Parliamentary Library, the Legislative Libraries of the nine provinces and the various departmental and research libraries maintained for reference and record. Numerically, the Dominion Government libraries are almost double those of the provinces but, exclusive of the Dominion Parliamentary Library which contains 500,000 volumes, the available book stock of the provincial libraries is equal to that of the Dominion libraries.

One outstanding feature of the provincial libraries is the teachers' libraries. Over 150,000 volumes are available for the use of approximately 75,000 teachers employed in the publicly controlled schools of Canada. In 1943, they borrowed, postage free, 110,000 books from the reference libraries established by the provincial authorities in education.

**Business Libraries.**—The past decade has seen some expansion in the number, size and classification of the libraries termed "business"; those of financial institutions, such as banks and insurance companies, comprise the greater number. Since the War, new libraries have been established by firms engaged in production processes that require special techniques and research; libraries of the larger newspapers and public utility corporations are included in this group.

**Technical Society Libraries.**—Law, medicine, pharmacy, entomology, engineering, art, astronomy and other professional and technical libraries are included in technical society libraries. The larger libraries contain as many as 30,000 volumes, the smaller ones from 500 to 1,000. Statistics of these libraries are given in Table 7.

**Regional Libraries.**—In the early 1930's, with the assistance of the Carnegie Corporation of New York, several experiments were undertaken with a view to providing more adequate library service to smaller communities and rural districts. These experiments were undertaken in the belief that the county or similar district, rather than the isolated city or town, is the proper unit of library work and administration. The Fraser Valley experiment in British Columbia, the first to be undertaken, has become a permanent regional library, and two other similar libraries have been established in the Province; in Prince Edward Island it has become a permanent provincial library system. Nova Scotia, in 1938, established the Regional Libraries Commission, which employed a full-time director to assist interested areas of the Province in organization. A small regional library was established in New Brunswick in 1937. In Ontario a number of county library schemes have been established in the southwestern part of the Province where co-operation on a county or township basis has been developing.

**Travelling Libraries.**—The object of travelling libraries is to supplement the book stock of small public and school libraries and to provide free library service in communities where there is no established public library. Such libraries operate in every province. Three universities, Acadia, Dalhousie and St. Francis Xavier,

conduct such a service in Nova Scotia, and McGill University circulates libraries in Quebec and the Maritime Provinces. Each of the five most westerly provinces operates a provincial system of travelling libraries with headquarters at the provincial capital. In the Prairie Provinces the provincial service is augmented by libraries sent out by the Saskatoon Public Library and by the Lady Tweedsmuir Libraries established in the autumn of 1936.

**School Libraries.**—The problem of providing individual schools with a satisfactory supply of books has become increasingly difficult during recent years. In the interests of economy and efficiency, school authorities are entering into co-operative arrangements with public libraries and regional- or county-library systems for the purchase and exchange of books. In Ontario and British Columbia some individual schools contribute to the upkeep of the library unit and, in return, receive equivalent book service several times a year. In other cases the school contributes directly to the local public library while in cities, where both the school and the public library are under the same municipal administration, free library service to the schools is frequently allowed.

In sections, as in Alberta, where larger units of school administration have been established, improved library facilities have been centralized and a system of rotation or selected circulation has been established by the school authorities.

The Maritime Provinces are giving increased attention to the provision of books for rural schools. The Province of Nova Scotia has trebled the number of books in school libraries in the past decade.

This integration of school libraries with public-library service has precluded the possibility of obtaining accurate statistical data on school libraries separately.

**Training Schools for Librarians.**—Professional training leading to a degree or post-graduate diploma in library science is available at four universities and colleges in Canada—Mount Saint Vincent College, Halifax, N.S., Université de Montréal, and McGill University, Montreal, Que., Université d'Ottawa and the University of Toronto in Ontario. Acadia University, Wolfville, N.S., includes library science as an undergraduate elective course. In the decade 1933-43, women graduates totalled 555; men graduates numbered 34. The annual average for recent years is 40 women and 5 men.

Returns on staff for the library year 1943 contain information on the professional qualification of librarians. University and college libraries report 43 p.c., public libraries 30 p.c., and other libraries 20 p.c. of the total staff as having professional training. The total staff includes clerical and part-time workers. A corresponding compilation for the staffs of public libraries located in the larger cities results in 42 p.c. of the total with degrees or diplomas in library science. Government libraries report 28 p.c. with similar qualifications. At least 10 p.c. of the total staff may be classed as clerical workers.

Subsection 1. The Development of the Pension System.....	1061		

Before the end of the War the rehabilitation of members of the Armed Forces was, in many respects, definitely tied in with schemes for bridging the transition period. During the months that have passed since hostilities have ceased substantial progress has been made in the transition program: this is outlined in the Chapter on Reconstruction.

The rehabilitation of ex-service personnel has now become a function of a Department of Government which will permanently care for the interests of all ex-service men and women during the years to come. In this sense, as the transition period recedes and ex-service men and women are absorbed into civil life, veterans affairs will be more and more associated with help and assistance to the injured, training and education of the fit, and assistance, on a broad scale, to those who need it. It is therefore considered expedient to treat veterans affairs or the rehabilitation of ex-service personnel as a separate chapter of the Year Book instead of considering it side by side with reconstruction as was done in the 1943-44 and 1945 editions.

### Section 1.—The Department of Veterans Affairs

Established in October, 1944, to deal exclusively with matters affecting ex-service personnel and their dependents, the work of the Department of Veterans Affairs increased sharply with the end of war in Europe in May, 1945. Discharges had been comparatively few before 1945 but they had provided an excellent test for the legislation and for the machinery of re-establishment. When the War ended in August, 1945, and as the repatriation to Canada of the Armed Forces began, the rate of discharge, particularly in the later months of the year, increased sharply, reaching a peak in the month of October, 1945, when a total of approximately 92,000 veterans were discharged to civil life during that month.

Some idea of the magnitude of the task which faced the Department of Veterans Affairs may be gained from figures of enlistments and discharges. The total number of enlistments and enrolments in the Armed Forces up to V-J Day, Aug. 14, 1945, was 1,104,225. On V-E Day, May 7, 1945, the number who had been discharged to civil life was 240,000; by the end of 1945 that number had increased to approximately 650,000.

All of the 400,000 ex-service men and women discharged within a few short months after hostilities ceased were eligible for some type of individual service from the Department of Veterans Affairs. Many wanted training or continuation of education: most were eligible for war-service gratuities and re-establishment credits. The number of pension rulings increased sharply, while demands on treatment services became much greater than they had ever been.

The number of veterans taking vocational training, for instance, increased from 5,165 at the end of September, 1945, to almost 25,000 by the end of December. Those taking university education increased from 2,434 in September to approximately 23,000 at the end of the year. In the twelve months of 1945 the Canadian Pension Commission made awards of pensions in 23,258 cases, as compared with 21,955 cases for the whole period of the War up to the end of 1944.

This necessarily imposed a great deal of additional work on the staff of the Department, which designedly had been kept short of requirements until the end of the War in order that key positions might be made available for men still on the fighting fronts. When War broke out in September, 1939, the staff of the Pensions Branch of the Department of Pensions and National Health (later absorbed into the Department of Veterans Affairs) numbered 2,061. On V-E Day it had been increased to 7,719, with a large number of positions still unfilled. By December, 1945, the staff numbered over 11,000, all the male members having served in the Armed Forces.

While the Department of Veterans Affairs deals exclusively with matters of interest to veterans, certain legislation concerning them is, of necessity, dealt with by other Departments. For instance, Part I of the War Service Grants Act relating to the payment of gratuities is administered by the Paymaster General of the Appropriate Branch of the Department of National Defence. The Department of Labour administers the Reinstatement in Civil Employment Act, and is responsible, in co-operation with Provincial Departments of Education, for the provision of training facilities, although training is authorized and paid for by the Department of Veterans Affairs. With these exceptions, the rehabilitation legislation is entirely administered by the Department of Veterans Affairs.

In the following sections the work of the Department is discussed from a subject standpoint.

**Basis of Administration.**—The Department of Veterans Affairs has attempted so far as possible to decentralize its administration. Canada, for this purpose, has been divided into 16 districts and 3 sub-districts, with a district or sub-district office for each area.

It has been the objective—an objective largely achieved during 1945—of the Department to concentrate the district offices in one building. These rehabilitation centres, as they are called, are the points of contact for veterans desiring advice and assistance to help them re-establish themselves in civil life. Except in very extraordinary circumstances, where matters of policy are involved, the District Administrator or his assistant has the authority to take executive action on applications for most of the benefits making up the rehabilitation program.

The Veterans' Land Act organization, besides having offices in the rehabilitation centres, has additional regional offices strategically located throughout the Dominion in order to be as readily accessible as possible to veterans. The district repre-

sentative of the Director of the Veterans' Land Act is called the District Superintendent, and his headquarters need not necessarily coincide with the headquarters of the District Administrator.

In order that veterans may readily obtain authentic information concerning the rehabilitation program, the Department of Labour has co-operated with the Department of Veterans Affairs in placing a Veterans Officer (see p. 1066), himself a veteran, in each of its National Employment Offices throughout the country. Veterans Officers have been trained to advise and assist veterans with their re-establishment problems whenever possible.

## **Section 2.—Discharge Gratuities and Rehabilitation Allowances**

Upon discharge from the Armed Forces, an ex-service man or woman with a minimum of six months' service receives through the Department of National Defence:—

- (1) Any back pay and deferred pay credited to his account.
- (2) A rehabilitation grant of thirty days' pay of his rank, and one month's allowances for his dependents.
- (3) Clothing allowance of \$100.

These payments, except for the clothing allowance, do not apply if the service man is discharged for reasons of misconduct; the clothing allowance is paid in all cases unless the discharge for misconduct involved penal servitude.

Thus, nearly every service man becomes a veteran with enough money in his pocket to tide him over the immediate post-discharge period. As a part of his discharge procedure the veteran also applies for his war-service gratuities which are paid through the Department of National Defence in equal monthly cheques not exceeding the amount of pay and allowances drawn during his last clear month of service.

The War Service Grants Act provides a basic gratuity of \$7.50 for each thirty-day period of qualifying service plus 25 cents for each of those days served outside the western hemisphere. In addition, there is a supplementary gratuity of seven days' pay and allowances for each six months of service outside the western hemisphere and a re-establishment credit equal to the basic gratuity, which the veteran may use for certain purposes if he does not choose the alternative benefits of training and the Veterans' Land Act. (See pp. 1068-1072.)

The War Service Grants Act came into force on Jan. 1, 1945, and cheques began to go out early in that month. By the end of the year a total of \$122,698,974 had been paid to veterans by the three Services. At the end of the fiscal year (Mar. 31, 1946) this figure had been increased to \$207,682,072. As will be seen by the following statement, a considerable amount remains to be paid; the commitment for the Army alone, at the end of the fiscal year, was \$217,725,367. This figure represents gratuity applications actually passed and in payment, and the difference between the amount paid and the commitment is the amount remaining to be paid, in equal monthly cheques, to those veterans whose applications have been approved. It will also be noted that at the end of the fiscal year a total of 659,755 applications had been approved and that the total enlistment up to V-J Day (Aug. 14, 1945) was 1,104,225, indicating that the payment of gratuities was not two-thirds completed at the end of the fiscal year. No qualifications as to the use of the money by the veteran are placed on war-service gratuities.

## GRATUITIES UNDER THE WAR SERVICE GRANTS ACT

<sup>1</sup> Not available.

**Re-establishment Credits.**—In reviewing the War Service Grants Act the Special Committee on Veterans Affairs (see p. 1075) made extensive changes in the sections relating to re-establishment credits. While no change was made in the amount of credit, the purposes for which credits may be used were extended considerably. These purposes are outlined below with the changes set in italics.

- (1) The acquisition of a home—
  - (i) under the National Housing Act, 1944, in an amount not exceeding two-thirds of the difference between the lending value of the home and the amount of the loan made under that Act; or
  - (ii) not under the National Housing Act, 1944, in an amount not exceeding two-thirds of the difference between the appraised value of the home as approved by the Minister or the purchase price, whichever is the lower, and the amount of the encumbrance thereon, assumed or created by the member.
- (2) The repair or modernization of his home.
- (3) The reduction or discharge of indebtedness under any agreement for sale, mortgage, or other encumbrance on his home, in an amount not exceeding twice the amount that the member himself simultaneously contributes to such purpose.
- (4) The purchase of furniture and household equipment for his domestic use in an amount not exceeding *ninety per centum* of the purchase price of the furniture or household equipment or *the payment of the full cost of repair of such articles*.
- (5) The provision of working capital for his business.
- (6) The purchase of tools, instruments or equipment for his business *or the cost of repair of such articles*.
- (7) The purchase of a business by him in an amount not exceeding two-thirds of the difference between the purchase price and any indebtedness incurred for the purpose of the purchase of such business, if the payment of such difference entitles the purchaser to immediate possession.
- (8) The payment of premiums under any insurance scheme established by the Government of Canada, including *the payment of the purchase price of an annuity purchased by him under the Government Annuities Act*.
- (9) *Payment of fees and the purchase of special equipment including instruments, books, tools and other equipment required for educational and vocational training other than educational and vocational training provided by the laws of Canada for members of the forces; and*
- (10) Any other purpose authorized by the Governor in Council.

The Committee corrected another anomaly which appeared in the original Act by specifically stating that Section 13 of the Veterans' Land Act (loans to veterans on farms already owned by them) shall not be considered an alternative benefit to re-establishment credit. All other benefits of training and the Veterans' Land Act remain as alternatives to re-establishment credit and if all or part of the credit has been used it must be reinstated in full before applications for training or the Veterans' Land Act may be considered.

The original Act prevented the use of re-establishment credit for any purpose outside of Canada. This was relaxed in the amended Act to permit re-establish-

ment Credit to be used by veterans of the Canadian Forces residing outside Canada to pay premiums, as they fall due, on any Canadian Government insurance scheme for which they might be eligible.

The following statement gives the amounts of re-establishment credit authorized from the time the Act came into operation to Mar. 31, 1946. Generally speaking, changes made in the amended Act of December, 1945, have not influenced the trends to any marked degree.

RE-ESTABLISHMENT CREDITS  
(Jan. 1, 1945 to Mar. 31, 1946)

<u>Purpose</u>	<u>Applications Approved</u>	<u>Value</u>	<u>Percentage of Total Value</u>
	<u>No.</u>	<u>\$</u>	
Home Owning—			
Under National Housing Act.....	435	199,302	0.83
Not under National Housing Act.....	12,541	5,887,026	24.70
Repairs and modernization of home.....	10,410	1,684,960	7.07
Reduction or discharge of indebtedness.....	1,015	419,459	1.76
Purchase of furniture and household equipment.....	71,219	10,060,777	42.21

Purchase of tools, instruments or equipment....	11,097	1,939,385	8.13
Purchase of a business.....	891	449,904	1.89
Premiums on Dominion of Canada insurance ..	1,369	142,296	0.60
Special equipment for educational or vocational training.....	454	66,759	0.28
<b>TOTALS .....</b>	<b>126,362</b>	<b>23,835,447</b>	<b>100.00</b>

It is gratifying to note that a large proportion of credit authorized is being used to purchase tangible assets such as homes which the veterans are likely to retain in many cases for the rest of their lives. Actually 77 p.c. of the total amount has been used for purposes relating to homes including the acquisition or repair of homes and the purchase of furniture. Conservatively estimating the cost of a house at \$4,000 and with the average credit now \$410, the authorization to veterans of \$6,086,328 for the acquisition of homes would indicate that 12,976 veterans have committed themselves to over \$60,000,000 for home ownership.

The figure authorized for the purchase of furniture and household equipment is over \$10,000,000 and veterans, to obtain this amount, have had to pay from their own resources about \$3,000,000, making a total expenditure in this field of approximately \$13,000,000 by 71,219 veterans.

The number of veterans using their re-establishment credit for business purposes has tended to increase during the latter months of 1945 and the beginning of 1946. There is considerable evidence to indicate that the change in the legislation permitting the credit to be authorized for partnerships had some influence on the amount used for this purpose. However, the main reasons are probably the relaxation of certain wartime controls and the improvement in the supply situation.

### Section 3.—Post-Discharge Treatment

#### Subsection 1.—Treatment Facilities

The legislation enabling post-discharge treatment of members of the Armed Forces has lifted the patient strength of the Department of Veterans Affairs from a pre-war figure of slightly over 2,000 to a post-war figure of just under 20,000. This approximately ten-fold increase has taxed the Department's facilities, but the year's free post-discharge treatment granted ex-service personnel is self-limiting, and the bulk of this group will be taken care of by the spring of 1947.

The increased facilities required are being provided by such new hospital construction as has been completed; the taking over of hospitals no longer required by the Services; and the admission of Departmental patients to Service hospitals still functioning.

The continuing patient load of the Department will be made up of (a) pensioners requiring treatment for their pensionable disability, and (b) non-pensioners with service in a theatre of war. These groups are made up of ex-service men from the War of 1914-18 totalling about 110,000 and from the War of 1939-45 numbering about 700,000. It is estimated that approximately 12,000 beds will be required for the continuing needs of the Department's hospital services.

The total hospital construction program of the Department represents an estimated expenditure of \$36,000,000. Treatment facilities may be divided into four groups: (1) active treatment; (2) active convalescent (health and occupational centres); (3) special treatment centres, including tuberculosis; (4) veterans' homes.

**Active Treatment.**—In the first group, the construction of the new permanent hospital at Halifax of 250 beds is well under way. The Naval Hospital at Sydney, N.S., a 250-bed unit, has been taken over and is being operated by the Department for general treatment.

Plans are in preparation for the erection of a wing to provide additional operating room, X-ray, laboratory and recreational facilities at the Lancaster Hospital, Saint John, N.B. A large section (500 beds) of the 800-bed Military Hospital on Queen Mary Road at Montreal, Que., is being taken over by the Department. At Toronto, Ont., construction is going forward on the \$10,000,000 Sunnybrook project, the first section of which is almost ready for occupancy. Half of the Army hospital at Malton, Ont. (250 beds), is being converted to active treatment and contract has been let for the construction of a 300-bed mental infirmary at Westminster Hospital, London, Ont. The new wing of 276 beds at Shaughnessy Hospital, Vancouver, B.C., has been opened, and the 150-bed chest pavilion is nearing completion. The new 220-bed hospital at Victoria is also almost ready for occupancy.

The necessity to provide additional beds quickly left certain institutions inadequately serviced by such other facilities as operating rooms, laboratories, X-ray and out-patient services. In most of the active treatment hospitals, alterations and additions are being proceeded with in order to enlarge these facilities.

**Active Convalescence.**—The over-all plan for active convalescence provides seven Health and Occupational Centres across Canada. For the Halifax, N.S., area, a large section of the Navy base at Cornwallis is being converted to provide 300 beds.

At Saint John, N.B., a 100-bed Health and Occupational Centre is nearing completion. For the Montreal area, a 200-bed centre at Senneville, Que., is well under way and is expected to be occupied in the autumn of 1946. Until this new construction is ready the Army facilities at Huntingdon, Que., are being utilized to provide convalescent service. The 200-bed Rideau Health and Occupational Centre at Ottawa, Ont., is functioning almost to capacity, and at Toronto, Ont., the first 150-bed unit at Divadale is complete and on the second, a 300-bed unit at Sunnybrook, construction has been commenced; the convalescent facilities at Malton, Ont., are being utilized until the Health and Occupational Centre at Sunnybrook is completed. A 200-bed Health and Occupational Centre at London, Ont., will be ready by midsummer. At Winnipeg, Man., the construction of a 200-bed unit has been commenced and the Army facilities at Portage la Prairie

are being used until this is ready. Government House at Regina, Sask., has been taken over, altered and repaired, and is now providing 40 beds for active convalescent care. The R.C.A.F. hospital of 175 beds is being largely utilized for active convalescence. At Vancouver, B.C., the 200-bed unit at Burnaby is well under way and occupancy is expected by late summer; the Army facilities at Gordon Head are being used until this is completed.

**Special Treatment Centres.**—Because of the congestion in civilian sanatoria and the inability of the Department to obtain sufficient beds in these institutions, special centres have been set up in certain of the provinces for the care of tuberculosis patients. The Naval hospital of 250 beds at Cornwallis, N.S., is being operated as a tuberculosis unit. The 100-bed Naval hospital at St. Hyacinthe, Que., is being expanded to a 300-bed unit for the same purpose and the R.C.A.F. hospital at Lachine, Que., of 200 beds and the Veterans' Hospital at Peterborough, Ont., of 250 beds are being used for the exclusive care of cases of tuberculosis. Plans are under way for the erection of a 500-bed sanatorium of permanent construction at Senneville, Que. When this construction is complete, it is anticipated that the Lachine and St. Hyacinthe hospitals will be abandoned.

The special treatment unit at Lyndhurst, Ont., for the care of paraplegics is being operated to capacity, as is also the neurosis centre at Scarboro. The special treatment centres which, during the period of hostilities, were operated on a combined basis with the Services in neurosurgery, plastic surgery, orthopaedic surgery, urology, arthritic disease, etc., are now being operated entirely by the Department of Veterans Affairs.

**Veterans' Homes.**—The Department is charged with the responsibility of providing domiciliary care for aged veterans, and has under active consideration the extension of the facilities for this purpose. Veterans' Homes are now provided in reasonably close proximity to the Department's other treatment facilities.

In addition to the foregoing, money grants have been made available to civilian hospitals at Charlottetown, P.E.I., to provide 100 beds; at Kingston, Ont., to provide 130 beds; and at Port Arthur, Ont., to provide 100 beds. Plans are also under way for the taking over of Service hospitals at the following seven points: Sussex, Quebec, Ottawa, Hamilton, London, Brandon and Vancouver.

The total number of beds likely to be available to the Department on the completion of its present program is slightly in excess of 20,000. Approximately 8,000 of these beds will be made up of either leased premises or of the older and more obsolete type of hospital construction. The peak load is estimated to strike the Department during the year 1946 and when it has passed, consideration will be given to the abandonment of as much of this type of accommodation as no longer meets the high standard of hospitalization set up for the provision of hospital care for the ex-service man.

### Subsection 2.—Prostheses and Surgical Appliances

The Prosthetic Services Branch of the Department of Veterans Affairs, set up in August, 1916, has, as its first responsibility, the provision of prostheses and surgical appliances. It operates a main manufacturing centre at Toronto and eleven district depots from coast to coast with facilities for measuring, fitting, altering and repairing artificial limbs, orthopaedic boots, splints, braces and artificial eyes. In addition, minor orthopaedic appliances such as trusses, glasses, elastic hosiery, etc., are supplied through purchase from private manufacturers.

Under P.C. 4465, the Division supplies prostheses and surgical appliances free of charge to veterans who are eligible and also supplies, on a repayment basis, other Government Departments [such as the Department of National Defence and the Department of Mines and Resources (Indian Affairs)] the Canadian National Railways and, under P.C. 2311, provincial Workmen's Compensation Boards.

The Division carries out considerable research on prostheses, co-operates in this work with the National Research Council, and keeps abreast of developments in other countries. Glass for artificial eyes had been a pre-war German monopoly, but glass of equal quality has been developed which has adequately replaced the formerly imported product.

The Division previously supplied the prosthetic needs of veterans of the War of 1914-18, including 2,411 leg amputations and 967 arm amputations. This number has been increased by more than 1,900 amputation cases of the War of 1939-45. The total number of patients receiving prosthetic attention is in excess of 42,500 per year.

The Division also acts as liaison between the Department and the Canadian National Institute for the Blind, which gives care to blind veterans, of whom over 90 cases have been reported from the War of 1939-45. The Division also maintains liaison and co-operates with the National Institute for the Deaf and the Hard of Hearing, and the War Amputations of Canada.

### Subsection 3.—Dental Services

Like the parent Department of Soldiers Civil Re-establishment, the Dental Branch of this Department was created following the War of 1914-18 in order that ex-members of the Canadian Expeditionary Force might be given this all-important service during the transitional period of their return from army life to civilian occupations.

In the late summer of 1919 the establishment of the Dental Branch was authorized and in October, 1919, the Director of Dental Services was appointed and the formation of the Dental Branch was undertaken. Dental clinics were set up in the various hospitals and sanatoria then operated by the Department, and independent dental clinics in strategic centres of population throughout Canada. In some instances, fully or partially equipped clinics were taken over from the Department of Militia and Defence, for others the necessary equipment had to be obtained and installed, and personnel for the operation of all clinics was selected and appointed. In July, 1920, the Department had in operation approximately 30 clinics where dental treatment was available for ex-members of the C.E.F. eligible under the various qualifying classifications. In addition to these clinics, the services of civilian dentists in the towns, villages and rural areas were utilized, providing authorized treatment on a fee basis. Until Mar. 31, 1921, the services supplied by the Branch were limited to vocational students, pensioners for direct dental injury or diseases incurred during service, and those undergoing courses of authorized treatment as in- or out-patients who were certified to require dental attention for the efficacy of such treatment. On that date responsibility for the completion of post-discharge dental treatment, for which all ex-members of the C.E.F. were eligible, was transferred from the Department of Militia and Defence to the Department of Soldiers Civil Re-establishment. Within the next two years this latter treatment and that for vocational students was practically completed and there was a gradual lessening in the demand for dental treatment; many of the dental clinics were closed and the personnel, to a large extent, released.

Between the years 1923 and 1938 the demand for services fluctuated very little; however, and at the request of the Department of Justice, the responsibility of the administration and supply of dental treatment for all members of the Royal Canadian Mounted Police was undertaken. This arrangement is still in effect.

Early in 1939, following new legislation, many ex-members of the C.E.F. became eligible for dental treatment with the result that it was necessary to expand existing facilities and, with the declaration of war in September, 1939, the demands made on the Dental Division of the then Department of Pensions and National Health again increased. As a result of an arrangement with the Department of National Defence, service personnel who are not dentally fit on demobilization are given a post-discharge dental examination. The required treatment is then provided by the Dental Branch of the Department of Veterans Affairs, either in its own clinics or by private dentists on a departmental fee basis. Owing to the tremendous volume of dental treatment being requested of this Department, it was found necessary to decentralize the dental administration to a large extent. This was implemented by the appointment of a District Supervising Dentist and clerical staff in each Department of Veterans Affairs District with the exception of Prince Edward Island, which is administered from Head Office, Ottawa. The District Supervising Dentist is responsible for the allocation of authorized dental cases to clinics of the Department or private dentists in his District and is a readily accessible source of information and advice on dental treatment problems.

Dental clinics of this Department are now established in cities where D.V.A. district offices are situated, and all D.V.A. hospitals are provided with dental services.

The following ex-members of the Canadian Armed Forces are eligible for free dental treatment:—

- (1) All who are shown to have dental requirements listed on examination by the Canadian Dental Corps at the time of discharge or retirement.
- (2) Trainees and those entitled to training or other benefits under the Post-Discharge Re-establishment Order who must have dental treatment in order to avoid interference with their training because of an adverse dental condition.
- (3) Pensioners for direct dental injury or disease, gastric ulcer, duodenal ulcer, gastritis, and allied conditions; hand, and hand-and-arm amputees.
- (4) Pensioners hospitalized for pensionable disabilities.
- (5) Pensioners being treated as out-patients.
- (6) Non-pensioners with meritorious service.
- (7) Pensioners requiring institutional care.
- (8) Ex-members of the Armed Forces who served in the War of 1939-45, providing such treatment is authorized and commenced within one year of discharge.

Classes (1), (2) and (8) above, refer only to ex-members of the Armed Forces and those of auxiliary units who served in the War of 1939-45, while Classes (3) to (7) include ex-members of the C.E.F. and the Active Force.

## Section 4.—Pensions

### Subsection 1.—The Development of the Pension System

**Background of Canadian Pensions Legislation.**—The Pension Act of 1919 established a Board consisting of three members vested with exclusive power and authority to adjudicate upon pension claims and to award pensions for disability or death related to military service in the War of 1914-18. The Canadian pensions legislation as it developed following the War of 1914-18 is outlined at pp. 759-760 of the 1943-44 Year Book. The machinery which then took form has been adapted and applied to present circumstances.

In 1941, Parliament appointed a select committee to consider the general provisions of the Pension Act and ex-service men's problems and to make suitable recommendations in regard thereto. After consideration of the Committee's report, which was framed to meet present-day conditions and based on experience gathered in the administration of the Pension Act since the War of 1914-18, Parliament decided to make the provisions of that statute, with appropriate amendments, applicable to claims arising out of the War of 1939-45.

**Summary and Procedure in Regard to Application.**—The provisions of the Pension Act, as originally enacted in 1919, although wide and generous in their scope as compared with pension legislation in other countries, have been considerably broadened and extended by various amendments enacted from time to time during the past twenty-seven years. Amendments to the statute since 1919 have:—

- (1) substantially increased the actual amounts of pension payable;
- (2) widened the grounds on which pension might be awarded;
- (3) authorized certain additional benefits, such as clothing allowances for pensioners compelled to wear artificial appliances, allowances for parents, and special provisions for disability due to tuberculosis;
- (4) introduced the principle of personal appearance and public hearings for applicants;
- (5) with respect to the War of 1939-45 provided that service anywhere outside of Canada should be regarded as service in a theatre of actual war.

The procedure at present to be followed in dealing with applications for pension, arising out of the War of 1914-18 is laid down in Sects. 51 to 61 of the Act. Briefly it consists of three stages for applicants whose claims are not initially granted. On first application, the evidence presented is considered at what is known as a first hearing. If the Commission's decision is adverse to the applicant, he is entitled to a second hearing, provided he applies within 90 days of the first hearing. When presenting his claim for second hearing, he is required to include all disabilities which he claims to be due to his military service. Prior to second hearing, the applicant is furnished with a complete and detailed summary of all evidence available in the departmental records pertaining to his case. He is given every opportunity to review this evidence, to include any additional evidence he can secure, and is allowed six months, from the date of mailing the summary of evidence, in which to prepare his claim. When notified by the applicant or his representative that the claim is ready for hearing, the Pensions Commission then gives a decision on second hearing. If this decision is adverse to the applicant, he then has the right to appear before an Appeal Board of the Commission sitting in his district and to call witnesses if he desires. The judgment of the Appeal Board is final and the application cannot be considered again, except by special permission of an Appeal Board when it is shown, to the satisfaction of such a Board, that an error has been made by reason of evidence not having been presented or otherwise.

This procedure has proved eminently satisfactory for claims arising out of the War of 1914-18. Not only is the applicant made fully aware of the reasons which preclude entitlement to a pension, but he is given adequate expert assistance by the Veterans' Bureau or by the service bureaus of ex-service men's organizations in the preparation of his claim. It has resulted in bringing to a finality many claims in which applicants have realized that the evidence of continuity with service of the condition causing disability or death was insufficient.

The procedure affecting cases of the War of 1939-45, however, has been revised. Under P.C. 9553 of December, 1944, the time limits for the preparation and presentation of applications for current cases was suspended for the duration of the War and one year afterwards. When a claim has not been wholly granted, the applicant is advised of his right, under the new legislation, to renew his application without the imposition of any time limits and, when he is ready, he may inform the Commission of his intentions relating to the further prosecution of his claim, either by renewed application or by appeal. The procedure followed is very much in line with that followed in cases of the War of 1914-18 other than that there is no time limit imposed and an applicant may by-pass the "renewal hearing" and take his case before an Appeal Board sitting in his district.

The Canadian Pension Commission is also responsible for the administration under the Pension Act of a number of Orders in Council which provide for awards to merchant seamen, salt-water fishermen, civil defence workers, Corps of Civilian Fire-Fighters, Auxiliary Service personnel, Dominion Government employees and Special Constable Guards of the Royal Canadian Mounted Police.

### 1.—Pensions in Force as at Mar. 31, 1941-46

NOTE.—Figures for the years 1918-40 are given at p. 871 of the 1945 Year Book.

**Payment of Pecuniary Grants for Gallantry Awards.**—Certain gallantry awards, such as the Victoria Cross, Military Cross, Distinguished Flying Cross, Distinguished Conduct Medal, Conspicuous Gallantry Medal and Distinguished Flying Medal, carry with them pecuniary grants, which were formerly paid by the United Kingdom Government. To these were added, during the War of 1939-45, the Distinguished Service Medal and the Military Medal which formerly were not accompanied by pecuniary benefits. By Order in Council, P.C. 4736 dated June 17, 1943, the Canadian Government, through the Canadian Pension Commission, assumed the payment out of Canadian funds for all awards arising out of the War of 1939-45 and the United Kingdom was reimbursed for such awards already paid.

**Veterans' Bureau.**—As the years went by, following the War of 1914-18, more and more apparent became the need for some agency charged with the duty of advising veterans regarding pension rights, assisting them in procuring evidence relevant to their claims and presenting their cases before the pension adjudicating bodies. Applicants who had been refused pension were unable in most cases to understand the reasons for such refusal and felt that, if they had proper legal assistance, they would be able to present their cases in such a way as to ensure favourable decisions. Many solicitors gave time gratuitously to this work but in these cases, as well as in the cases where services were charged for by solicitors, the result was usually unsatisfactory, because the preparation and presentation of pension cases is a highly specialized professional art requiring knowledge of one of the most difficult Acts on the Statute Books, knowledge of the interpretations placed upon the Act by the Canadian Pension Commission and, above all, long medico-legal experience. The vast majority of contentious pension cases arise out of disease or a complication of diseases rather than out of wounds, for in the case of wounds the disability is obvious and its connection with service certain and, therefore, pension is granted as a matter of course without application.

The Veterans' Bureau was established in 1930 as a Branch of the Department which is now the Department of Veterans Affairs. Many of the original appointees as Pensions Advocates are still on the staff of this Branch of the Department.

The Canadian Pension Commission, as well as the Veterans' Bureau, is under the Minister of Veterans Affairs, but has its own deputy head and, apart from the incidence mentioned, the relationship between the Veterans' Bureau and the Commission is practically the same as exists between the members of the Bar and the Judiciary. The function of the Veterans' Bureau is to represent the applicant for pension and present his claim in every legitimate way to the extent of opposing Commission decisions, not only in individual cases but generally in the interpretation placed upon sections of the Pension Act.

The Veterans' Bureau maintains a Head Office staff and a District Pensions Advocate in each district throughout Canada who is responsible to the Chief Pensions Advocate. The duties of a District Pensions Advocate in regard to a particular applicant originate usually through advice to the applicant to consult him, given after an unfavourable decision upon first hearing, but the services of the District Pensions Advocate are nevertheless open to any applicant for pension whether directed to him or not. He prepares the applicant's case for second hearing or renewed hearing as the case may be, and, if the case is carried to the Appeal Board, attends upon the hearing, examines the applicant and his witnesses and argues any relevant issues before the Appeal Board. Upon request of the applicant or upon his own motion, if he is dissatisfied with the decision, he reviews the case and considers whether a motion should be made to reopen the decision of the Appeal Board. He is at all times encouraged to consult, and secure the advice of, the medico-legal experts at his Head Office. His services are free of all charge to the applicant.

### Subsection 2.—War Veterans' Allowances\*

The War Veterans' Allowance Act was introduced in 1930 to make provision for the maintenance of veterans of the Canadian Expeditionary Force; veterans of His Majesty's Forces or the Forces of His Majesty's Allies who were domiciled in

\* Application for War Veterans' Allowances should be made to the nearest District Office of the Department of Veterans Affairs. Final decisions are made by the War Veterans' Allowance Board, Ottawa.

Canada at the time of enlistment for the War of 1914-18, provided they were incapable of maintaining themselves on attaining the age of 60 or at any age, if permanently unemployable.

Various amendments to the Act now enable the Board to grant war allowances to the following:—

- (1) A veteran of the North West Field Force.
- (2) A veteran of the South African War.
- (3) A veteran of the War of 1914-18.
- (4) A veteran of the War of 1939-45.
- (5) A member of the South African Military Nursing services, domiciled and resident in Canada prior to becoming a member and who has served any place outside Canada.
- (6) A person domiciled and resident in Canada certified by the Under Secretary of State for External Affairs as having been enrolled by the United Kingdom authorities for special duty in war areas during the War of 1939-45.
- (7) A veteran who is not eligible to receive an allowance under the War Veterans' Allowance Act and who has not served in a "theatre of actual war", but was either: a former member of the C.E.F. (War of 1914-18) and has served in the War of 1939-45, or a former member of His Majesty's Forces who was domiciled in Canada when he joined the said Forces of the War of 1914-18, and who served in the Canadian Forces during the War of 1939-45, may be granted a Dual Service pension under the Dual Service Pension Order. Regulations as to other qualifications, rates, exemptions, etc., are identical as to those governing the War Veterans' Allowance Act.
- (8) Widows and orphaned children of the above veterans.

The War Veterans' Allowance Act and amendments now provide for three classes of veterans:—

- (1) The veteran who has attained the age of 60 years.
- (2) The veteran of any age who, because of physical or mental disabilities, is permanently unemployable.
- (3) The veteran, regardless of age, who served in a "theatre of actual war" and is, in the opinion of the Board, incapable of maintaining himself and unlikely to become capable due to a combination of reasons or handicaps, physical, mental or economic.

Classes (1) and (2) must have served in a "theatre of actual war," or be in receipt of pension or have received a final payment by agreement in commutation of pension. Class (3) applies only to veterans who served in an actual theatre of war. Widows and orphans of veterans are admitted to the benefits of the Act and amendments, providing the veteran himself was eligible during his lifetime.

While the amount of any allowance payable is discretionary with the Board, the maximum permissive income from all sources (including War Veterans' Allowances) for a single veteran is \$365 per annum and \$730 for a married veteran or widower with dependent children. The basic allowance under the Act is \$20 and \$40 per month to single and married veterans, respectively. However, amending legislation in January, 1944, provided for a supplementary allowance of \$10.41 per month in the case of a single veteran and \$20.83 per month in the case of a married veteran or widower with dependent children; but the maximum permissive income from all sources remains as outlined above.

Provision has been made for (veterans' care) treatment for recipients of War Veterans' Allowances other than widows.

Provision has been made for the continuation of an allowance on behalf of a child until the age of 19 years, for educational purposes.

Applicants must have been domiciled in Canada for the six months immediately preceding date of commencement of allowance.

Allowances are not payable outside the Dominion of Canada.

Old Age Pension and War Veterans' Allowance or Dual Service Pension or Widows' Allowance cannot be paid concurrently.

The basic allowances for widows are:—

- (1) \$365 per annum to a widow without dependent children.
- (2) \$730 per annum to a widow with dependent children.

The basic allowances for orphans are:—

- (1) \$365 per annum for one orphaned child.
- (2) \$648 per annum for two orphaned children.
- (3) \$730 per annum for more than two orphaned children.

The following exemptions from income are allowed:—

- (1) Casual earnings of \$125 per annum.
- (2) Unearned income of \$25 per annum.
- (3) Provincial or municipal relief monies paid on account of dependent children.
- (4) Mothers' Allowance paid on behalf of dependent children.
- (5) Any monies paid under Sect. (4) of the War Service Grants Act.
- (6) Assigned pay received from a member of the Armed Forces. If, however, Dependents' Allowance is also in payment, both Dependents Allowance and Assigned Pay must be regarded as income.

Since the enactment of the legislation, a total of 42,744 awards have been made by the War Veterans' Allowance Board.

At the end of the fiscal year 1931 the total amount of liability was only \$733,585 for War Allowances but by Mar. 31, 1944, when the legislation was broadened to cover the North West Field Force, Dual Service Pensions, as well as the veterans of the War of 1939-45, the liability had reached \$9,273,543.

As at Jan. 31, 1946, the annual liability was \$11,854,668 and the number of beneficiaries under the above legislation was 28,009, made up as follows: veterans of the North West Field Force, 129; veterans of the South Africa War, 550; veterans of the War of 1914-18, 24,038; veterans of the War of 1939-45, 63; widows, 3,056; orphans, 32; and pensioners under Dual Service Pension Order, 141. Of the total number, 17,365 have been awarded supplementary allowances.

## Section 5.—Rehabilitation of Veterans

The Administration Division of the Rehabilitation Branch of the Department of Veterans Affairs is responsible for the efficient administration of benefits available to discharged members of the Forces, under the terms of the Veterans' Rehabilitation Act and regulations drawn up under that Act, other than matters relating to vocational, technical or university training. Briefly, these functions are as follows:—

(1) Administration of out-of-work allowances. Payment of such allowances, under an agreement with the Unemployment Insurance Commission, is now being made by the Department of Labour on authorization of the Department of Veterans Affairs. In this connection, it is to be noted that the administrative machinery to place veterans in employment comes under the jurisdiction of the Department

of Labour, which Department is also charged with the administration of the Reinstatement in Civil Employment Act. Under arrangements made between the two Departments, however, the Department of Veterans Affairs is accorded the privilege of finding employment for the seriously disabled in collaboration with officials of the National Employment Service.

As a result of this close liaison between the Departments, arrangements have been made whereby in all centres where the National Employment Service maintains an office, other than in those centres where the Department of Veterans Affairs maintains a District or Sub-district Office, the Employment Service has, on its staff, an official known as a Veterans Officer who, as a result of a period of training, is familiar with the legislation and regulations affecting the rehabilitation of veterans, and is thereby available to give advice and guidance to veterans residing in such areas on matters relating to their rehabilitation which come within the jurisdiction of the Department of Veterans Affairs. He also receives applications for benefits under the Veterans Rehabilitation Act and regulations and forwards these to the nearest rehabilitation centre for final consideration.

Transversely, the National Employment Service has stationed in each rehabilitation centre, maintained by the Department of Veterans Affairs, an official designated as an Employment Adviser to whom veterans reporting for counselling with regard to their rehabilitation plans are referred when their interest lies in securing employment rather than in securing training benefits available under the Department's enabling authority.

(2) Administration of allowances for veterans awaiting returns from private enterprise engaged in on their own account, including allowances available to veterans who have taken up full-time farming or commercial fishing under the terms of the Veterans' Land Act. Close liaison is maintained by the Administration Division and the Re-establishment Credits Division of the Rehabilitation Branch and officials of the Veterans' Land Act Administration and care is exercised to ensure that the veteran will get the best possible advice before embarking upon an enterprise or business. In this connection also it should be noted that members of Citizens' Committees, familiar with business opportunities in the particular centre in which the veteran wishes to establish himself, have co-operated in advising the Department and these veterans of the chances of the veteran succeeding in his proposal.

(3) Administration of allowances available to veterans who are temporarily incapacitated. This benefit is designed particularly to care for veterans who do not require any active remedial hospital care to which they may be entitled under the Department's enabling authority but where, because of some ailment, they may be debarred from working for a short period.

One of the most important functions of this Division is performed by the Casualty Section, which deals, in collaboration with medical and training officials of the Department, with the problem of assisting in the rehabilitation of seriously disabled individuals, primarily amputees, the blind and the deaf, and those suffering from other serious physical disabilities. The philosophy of dealing with such cases has undergone a radical change, in that it is now realized that the Department must stress not what a veteran has lost in the way of physical or mental capacity but rather what remaining faculties he has, and endeavour to build on these factors. It has been amply demonstrated that even those very seriously disabled can be success-

fully rehabilitated, providing the veteran has the will and desire to help himself and providing proper training be given, so that he may be placed in employment within his physical and mental capacity.

In this connection, it should be recorded that the Casualty Section co-operates closely with the following Dominion-wide organizations: Canadian National Institute for the Blind; Canadian National Institute for the Deaf and Hard of Hearing; War Amputations of Canada; the Canadian Legion and other veteran organizations; and Service Clubs. All of these organizations are rendering invaluable assistance to Casualty Officers in this field.

Officials of the Administration Division also act as the veteran's friend in advising regarding rights and privileges under regulations administered by other Government Departments, Dominion, provincial and municipal.

**Discharges and Employment.**—By Feb. 28, 1946, the work of demobilization was almost three-quarters done; total discharges at that date were 714,293 men and 28,643 women. At the same time there were left in the Services a total of 282,554 to be discharged, made up of 24,699 Navy, 213,270 Army and 44,585 Air Force personnel.

**2.—Discharges from the Armed Forces to Civil Life, by Months and Sex, November, 1944 to February, 1946**

<sup>1</sup> Based on National Defence Headquarters figures.

Although many veterans have taken advantage of the benefits of vocational training, educational training and the Veterans' Land Act, the majority have returned to civil employment. The National Employment Service of the Department of Labour has rendered great assistance to these veterans and, by stressing the policy of veterans preference, had made 606,167 placements up to Jan. 31, 1946. This figure does not represent the total number of veterans placed; two or more placements are often made for one veteran, as many do not become settled in their first job after discharge. The following statement shows the monthly placements of veterans of the War of 1914-18 and the War of 1939-45 with cumulative totals of placements.

### 3.—Employment Placements of Ex-Service Personnel, by Months, October, 1943 to February, 1946

<b>1946</b>			
January.....	1,250	18,204	589,336
February.....	1,182	15,649	606,167

Regardless of the preference given to veterans in employment, the large numbers of additional workers placed on the labour market through demobilization, coupled with fewer jobs available because of cancellation of war contracts and the reconversion of industry, caused a sharp increase in the numbers of veterans unemployed from V-E Day, May 7, 1945, to the end of February, 1946. The following statement shows the numbers of veterans registered with the National Employment Services as unemployed from November, 1944, to February, 1946.

### 4.—Veterans Registered with the National Unemployment Service as Unemployed, by Months and Sex, November, 1944 to February, 1946

### Subsection 1.—Vocational Training

The rehabilitation training program procedure in dealing with discharged persons who made application for training benefits previously came under the Post Discharge Re-establishment Order. This Order has now been replaced by the Veterans' Rehabilitation Act and the regulations and procedures governing training

have been modified and consolidated so that there is now a comprehensive and uniform plan in operation throughout Canada.

Veterans are being trained in approximately 100 specially organized institutes or training centres, operated by the Dominion-provincial organization known as Canadian Vocational Training. Use is being made of facilities provided by private, provincial and municipal schools and training institutions.

Of the total number of veterans receiving vocational training under the Rehabilitation program as at Jan. 31, 1946, 71.1 p.c. were receiving full-time training in schools and institutions; 26.5 p.c. were being trained on the job in industrial and commercial establishments; 2.3 p.c. were receiving assistance by way of fees for correspondence or part-time courses; and 0.1 p.c. were blind veterans being trained for suitable occupations under the auspices of the National Institute for the Blind.

Training is provided for approximately 100 occupations in the schools and training centres throughout the Dominion, but training on the job is provided in over 400 different trades and occupations.

The following table, showing the number of training allowances paid to veterans receiving vocational training in each month since November, 1941, indicates the growth of the program since its inception. The numbers remained very small during 1942 and 1943, due to the relatively small numbers being demobilized and the demand for workers in war industries at high rates of pay.

5.—Number of Veterans Receiving Vocational Allowances, by Months, 1941-46

Month	1941	1942	1943	1944	1945	1946
	No.	No.	No.	No.	No.	No.
January.....	—	138	275	573	1,892	21,998
February.....	—	218	264	646	2,407	27,511
March.....	—	271	246	764	3,081	29,756
April.....	—	268	202	763	3,330	32,184
May.....	—	247	181	814	3,651	34,187
June.....	—	202	224	774	3,962	35,598
July.....	—	171	310	863	3,990	—
August.....	—	193	271	950	4,145	—
September.....	—	172	330	1,083	4,332	—
October.....	—	211	335	1,360	5,980	—
November.....	12	263	394	1,596	8,523	—
December.....	77	287	459	1,700	16,457	—

The regulations provide for a maximum training period of twelve months subject to extension up to, but not exceeding, the period of active service. Those who served less than twelve months may receive training allowances for only as many months as they served on active rates of pay.

The average length of vocational training courses is approximately six months. In the case of highly skilled trades, veterans approved for advanced technical courses and those indentured as apprentices in highly skilled trades may receive assistance by way of grants or subsidies for two years or more, provided they have served the necessary period to establish entitlement. Where veterans are trained on the job the employer is expected to pay wages on a graduated scale commensurate with the earning capacity of the trainee and subject to the limitations of the Act. The Department of Veterans Affairs subsidizes these wage rates up to approximately 80 p.c. of the amount the trainee will receive from the employer on completion of the subsidized training period.

The following table indicates the disposition of 11,717 trainees who had completed or discontinued training at the end of 1945.

**University Training Program.**—The Veterans' Rehabilitation Act provides that if a veteran, man or woman, qualifies for and commences a regular university course within 15 months after discharge, tuition and other fees will be paid on his behalf and he may receive a training allowance of \$60 per month with extra allowances for dependents.

The allowances are paid only while the student is actually at the college and are continued, if needed, for as many months as his active service, provided that he passes all examinations *en route*. If he fails in a year's work no further assistance is available for university studies. On the other hand, if he is of scholarship calibre allowances may be continued on a year-to-year basis beyond his period of entitlement and an outstanding or exceptionally able student may be assisted in post-graduate study when such is in the public interest.

A high proportion of the young men and women of Canada are taking advantage of this opportunity to fit themselves for positions of leadership with the result that Canada has embarked upon a large-scale experiment in adult education. By September, 1946, it is expected that at least 35,000 veterans will be enrolled in Canadian universities. This is equal to the total full-time enrolment of university students in Canada immediately preceding the War of 1939-45. The fact that 25 p.c. of the veterans are married has added to the complex problems of Canadian universities.

On the recommendation of the Advisory Committee on University Training for Veterans, established by P.C. 3206, May 3, 1945, legislation was introduced to financially assist Canadian universities in their efforts to provide adequate facilities for qualified veterans. In addition to the regular tuition and other fees, the Department of Veterans Affairs was authorized to pay an additional grant to a university, not to exceed \$150 per veteran, for the period July 1, 1945, to June 30, 1946, for the purpose of assisting in defraying the instructional, counselling and administrative costs incurred by the university. This timely action made it possible for Canadian universities to admit 20,000 veterans by Feb. 1, 1946.

At least 40 p.c. of the veterans either lack certain university entrance requirements or need refresher courses before entering university. Through the facilities of Canadian Vocational Training, the Provincial Departments of Education have organized tutorial classes and facilities for more than 10,000 veterans.

In order to assist the universities in providing emergency accommodation, a Committee of University Requirements was set up by P.C. 7129, Dec. 4, 1945, and through the co-operation of the Department of National Defence, the Department of Public Works and War Assets Corporation temporary facilities have been made available to the universities. A Committee on Education Overseas was established under P.C. 4161, Aug. 7, 1945, to make provision for certain Service personnel discharged overseas to resume or commence special studies, usually at the graduate level, in overseas institutions prior to return to Canada.

### Subsection 2.—The Veterans' Land Act

Provision is made in the Act to assist three main groups or classes of veterans:—

- (1) Veterans who have had practical farming experience and who wish to resume farming as a full-time occupation.
- (2) Veterans who have reasonable assurance of steady dependable income, as for instance in industry, commerce, or in the field of agricultural employment and who wish, in addition, to obtain a small block of productive land, preferably an acre or more in a semi-rural or rural area outside high-taxation districts.
- (3) Those who have had practical experience in commercial fishing whose normal occupation is in that industry and who wish to obtain a small holding settlement coupled with commercial fishing in coastal and inland areas where commercial fishing is a recognized industry.

Provision is made in the Veterans' Land Act whereby a substantial part of the cost of each establishment is borne by the State, except in the case of a mortgage loan on land already owned by a veteran. Past experience has shown that the average veteran, operating under typical conditions, cannot be expected to successfully cope with the repayment of debt representing approximately the full cost of establishment. Further, the average veteran is not possessed of sufficient capital to enable him to establish at the outset of rehabilitation, the margin of equity generally recognized as essential to the soundness of land settlement credit operations. The Act recognizes these facts and brings within the vision of such veterans debt-free ownership of homes at relatively low annual cost.

The Director of the Veterans' Land Act may contract with any veteran who has been officially certified to be qualified to participate in the benefits of the Act, for the sale to such veterans of land and permanent improvements thereon, live stock, farming equipment or fishing gear; up to a total cost to the Government of \$6,000. Not more than \$1,200 of the \$6,000 may be used for the purchase of such chattels. The veteran must pay in advance 10 p.c. of the cost of land and improvements—plus any cost in excess of \$6,000. He then contracts to pay two-thirds of the cost to the Government of land and permanent improvements only, on an amortization plan over a period not exceeding 25 years, together with interest at  $3\frac{1}{2}$  p.c. per annum.

By the terms of this settlement contract, the veteran is relieved at the outset of  $23\frac{1}{3}$  p.c. of the cost of the land and buildings and 100 p.c. of the cost of the chattels supplied to him by the Director. It is provided, however, that the veteran may not sell or otherwise dispose of the land and buildings or the chattels within a period of 10 years following the date of his agreement and realize for his own benefit the difference between the cost and the amount which he contracts to pay. At the end of 10 years, if he has complied with the terms of his agreement, he will be granted title to the chattels, and title to the land and buildings when he has completed payment of the balance owing under the terms of his agreement.

The Director may also assist officially qualified veterans who wish to resume farming operations on land already owned by them and who want to borrow funds to readjust their debts or re-equip or improve their farms. In such a case the advance is limited to \$4,400 with interest at  $3\frac{1}{2}$  p.c., and to not more than 60 p.c. of the approved value of the land. No more than \$2,500 of the loan may be used for the purchase of live stock and farming equipment, and the loan for this purpose must not exceed 50 p.c. of the approved value of the land. Such assistance is repayable in full but does not affect the right to a re-establishment credit.

Assistance is available to officially qualified veterans in a third form. Agreements have been completed with the Governments of the three Prairie Provinces and are under discussion with other provinces respecting the settlement of veterans on provincial lands. Under such agreements the Director of the Act may grant to a veteran an amount not exceeding \$2,320 for the purchase of essential building materials and other costs of construction; clearing and preparation of the land for cultivation; the purchase of essential farming live stock and machinery; the purchase of live stock and machinery essential to forestry; the purchase of essential commercial fishing equipment; the purchase of fur-farming equipment, but not breeding stock; and the purchase of essential household equipment. Land tenure and the conditions under which title may be obtained are the subject of agreement between the veteran and the Provincial Government concerned.

A somewhat similar agreement has been reached with the Department of Mines and Resources covering the settlement of Indian veterans on Indian Reserves. The grants in both cases need not be repaid, but are subject to 10 years compliance with settlement conditions.

Eight District Offices—located at Vancouver, Edmonton, Saskatoon, Winnipeg, Toronto, Ottawa, Montreal, and Saint John, have been opened up; as well as 45 Regional Offices. The veteran's point of contact with the administration is the Regional Office. At each Regional Office an Advisory Committee is available to assist in assessing the qualifications of applicants and determining the suitability and value of lands.

Settlements under the Veterans' Land Act were purposely restricted, prior to the cessation of hostilities, due principally to shortages of farming equipment and building materials, and to good employment opportunities throughout the Dominion.

### Subsection 3.—Out-of-Work Allowances

During the period between Apr. 1, 1945, and Feb. 1, 1946, the need for assistance to ex-service personnel through the medium of out-of-work allowances increased tremendously.

So long as a state of hostilities existed, employment opportunities were abundant. The number of veterans requiring assistance during the brief transitional period between the time of discharge and the securing of employment remained at a fairly constant and low level as compared to the numbers released from the Forces. However, subsequent to V-E Day as the rate of demobilization from the Navy, Army and Air Force was sharply accelerated, placements were retarded and the interim period between discharge and employment increased.

In order to provide a wide coverage for the operative facilities used in paying out-of-work allowances, the administrative machinery established for the payment of benefits under the Unemployment Insurance Act was utilized to pay out-of-work allowances authorized by the Veterans Rehabilitation Act.

Under the arrangements agreed upon, ex-service personnel may apply for work at any National Employment Service Office. If no suitable work is available an application may be made for out-of-work allowances. The Unemployment Insurance Claims Officer issues a cashable voucher or warrant each week for the number of days in that week that the ex-service applicant was unemployed.

There are several advantages to this arrangement. In the larger centres the applicant receives his allowances in cash. Since all applicants are potential future beneficiaries under the Unemployment Insurance Act, through the receipt of out-of-work allowances they are inducted into the procedures used in paying unemployment insurance benefits. Furthermore, through his weekly contact the applicant is in constant touch with the placement facilities of National Employment Service.

As an indication of the extent to which this arrangement is operating, 38,611 ex-service personnel were paid \$1,263,994 in out-of-work allowances through the Unemployment Insurance Commission's facilities during the first month of operation, February, 1946.

### Section 6.—The Veterans' Insurance Act

The Veterans' Insurance Act—another rehabilitation measure—was enacted in the summer of 1944 and became effective Feb. 20, 1945. The organization began functioning on Apr. 1, 1945. Under this Act, veterans of the War of 1939-45

may obtain life insurance from the Government for the protection of their dependents and as a savings plan for themselves.

The insurance is non-participating and is available in multiples of \$500 up to \$10,000 in a variety of plans ranging from ten payment life, to life paid up at 85. In all but exceptionable cases the insurance may be purchased without medical examination. Widows of former members of the Forces are also eligible.

Policy No. 1 was issued on Apr. 1, 1945, and up to Mar. 31, 1946, a total of 4,107 policies had been issued for a total amount of insurance in force of just over \$12,000,000, the average policy being for approximately \$3,000.

Of this total, 63 policies for insurance in force of \$362,500 had been issued to veterans residing outside Canada and 45 of these veterans took advantage of the amended War Service Grants Act, which enables them to use their re-establishment credit to pay the premiums for this insurance as they fall due. Fifty-five of these policies for \$303,500 of insurance had been issued to veterans residing in the United States, and eight for \$59,000 worth of insurance were issued to veterans residing in the United Kingdom.

The following statement indicates the several plans available and the monthly premiums for each plan, per \$1,000 of insurance, at various ages:—

MONTHLY PREMIUMS PER \$1,000 INSURANCE PAYABLE AT AND TO CERTAIN AGES

Age	Payable for—			Payable to Age 65	Payable to Age 85

55 " .....	6.45	5.01	4.40	6.45	4.03

## Section 7.—Special Committee on Veterans Affairs

At the First Session of Canada's Twentieth Parliament in September, 1945, a Special Committee on Veterans Affairs, comprising 60 ex-service and active service members of the House of Commons, was set up to review and consolidate all legislation and Orders in Council affecting veterans of the two world wars. The Committee first went into session on Oct. 9, 1945, and submitted to Parliament recommendations concerning the legislation of the War Service Grants Act, Post Discharge Re-establishment Order and the Veterans' Land Act.

Altogether about a dozen amendments were made to the War Service Grants Act (1944); the most outstanding change was that giving wide powers to a Board of Review to pay gratuities and re-establishment credits to persons discharged for reasons of misconduct. This Board is empowered to investigate the circumstances under which the veteran was discharged and, after due consideration, to award the benefits of the Act if, in the opinion of the Board, it would be inconsistent with "the true spirit and interest of the Act to deprive the veteran" of its benefits.

Other amendments include an enlargement of the definition of "business" to include any trade, industry or profession a veteran might be entering and to include former members of the Canadian Women's Army Corps for all benefits

brought into effect before they became incorporated as a part of the Canadian Armed Forces. Most of the remaining amendments refer to Part II (re-establishment credits) of the Act and liberalize or extend the uses for which the credit may be approved. Among these was an amendment permitting veterans to retain their re-establishment credit, if they borrow under Section 13 of the Veterans' Land Act against lands already owned, and an amendment permitting non-resident veterans of the Canadian Armed Forces to buy Dominion of Canada annuities or veterans insurance policies with their re-establishment credit.

The chief amendments to the Veterans' Land Act authorized the Minister of Veterans Affairs to enter into agreement with the provinces for the settlement of veterans on provincial land, and to provide financial assistance to veterans in the form of grants, up to \$2,320, to be used in certain specified ways to facilitate settlement.

The Act was also amended to make benefits available to members of the House of Commons and the Senate who were on active service in the War of 1939-45. The definition of "overseas service" was amended and aligned with that used in the War Service Grants Act.

The Committee's recommendations in connection with the Post Discharge Re-establishment Order took the form of a new Act called the Veterans Rehabilitation Act. This Act embodies all the benefits of the Post Discharge Re-establishment Order and, in addition, broadens their scope. Many other amendments of lesser significance were made.

The ultimate objective is to consolidate all the legislation relating to veterans in one statute to be appropriately named "The Veterans Charter".

# CHAPTER XXIX.—NATIONAL DEFENCE

SECTION 3. THE ROYAL CANADIAN AIR FORCE.....	1089	SECTION 4. THE DIRECTOR GENERAL OF DEFENCE RESEARCH.....	1099

Although the original Militia and Defence Act was passed soon after Confederation, on May 22, 1868, Canada's present defence organization has been an outgrowth, essentially, of her direct participation in the two world wars of this century. Before the outbreak of the War of 1914-18, national defence was centred in the Canadian Militia which, at Mar. 31, 1914, consisted of a Permanent Force of 3,000 officers, non-commissioned officers and men and an Active Militia of 5,615 officers and 68,991 non-commissioned officers and men.

The Royal Military College of Canada, founded in 1876, has a very distinguished record in connection with the training of all branches of the military profession and for the qualifying of officers for command and staff appointments (see pp. 1087-1088).

The Naval Arm of the Service was, at that time, neither so old nor so important as the Militia. The Naval Service of Canada was established by the Naval Service Act of 1910. This Act gave effect to decisions reached at the Conference on Imperial Defence held at London during the previous year. In general principle the Naval Service Act followed closely the lines of the Militia Act, but the new Naval Service Department was for a time placed under the Minister of Marine and Fisheries. A Naval College was established at Halifax, N.S., where boys selected after competitive examination were educated and trained for the Canadian Navy. The protected cruisers, the *Niobe* stationed at Halifax, N.S., and the *Rainbow* stationed at Esquimalt, B.C., were purchased from the Royal Navy and recruiting for the Canadian Navy commenced but by 1914 the Canadian Navy had done little more than lay its foundation.

During the War of 1914-18, Canada built up from her pre-war Militia Forces an Overseas Active Army Corps of four Divisions with complete supporting and ancillary units. There had been sent overseas at the date when hostilities ceased on Nov. 11, 1918, about 418,000 officers, non-commissioned officers and men.

The Royal Canadian Air Force was not in existence at this time, but several thousand Canadians served with the Royal Air Force and after the War an Air Board was established to regulate Canada's commercial, civil government and military aviation. Out of this original Air Board, the present R.C.A.F. on the one hand and the Civil Aviation Administration on the other have grown. In 1920 a Canadian Air Force was set up, under the Air Board, as a Non-Permanent Force to give refresher training to former pilots, observers and airmen of the Royal Air Force. In 1922 a complete reorganization of the C.A.F. was undertaken from which it emerged on Apr. 1, 1924, as a Permanent Force honoured by the King with the prefix "Royal".

In 1922, the National Defence Act was passed which consolidated the Department of Militia and Defence, the Naval Service and the Air Board into the Department of National Defence. A Defence Council was also set up consisting of a President (the Minister), a Vice-President (the Deputy Minister), and the following associate members: the Chief of General Staff and the Chief of Naval Staff, the Adjutant-General, the Quartermaster General and the Director of the R.C.A.F.

From this beginning, the growth of each of the three National Defence Services is traced to the outbreak of the War of 1939-45 in the Year Books published from 1930 to 1938; at pp. 1041-1046 of the 1938 edition is shown the strength of each Service prior to that War. During the War of 1939-45, the Canadian Armed Forces expanded to 1,000,000 men and 47,000 women. These figures exceeded by more than 60 p.c. the 620,000 who went overseas or remained in training in Canada in 1914-18. The strength of the Army personnel alone was 730,000, including 25,000 women. Of this total, 630,000 were volunteers and over 370,000 all ranks served in the European zone. In addition, 14,000 troops served in operational units in Hong Kong, Alaska and the islands of the Atlantic.

The strength of the Air Force grew from 4,606 in September, 1939, to a peak of 206,350, including 15,153 women, in December, 1943. The signing of the British Commonwealth Air Training Agreement in December, 1939, whereby Canada undertook the general administration and management of the combined program, placed on the shoulders of the R.C.A.F. a major burden and responsibility (see pp. 1090-1099).

The Royal Canadian Navy expanded during the War from a personnel of 3,922 to a total enlistment of 107,226, the top strength at any one time being 92,880 on active service and 3,000 reserves. The Women's Royal Canadian Naval Service contributed 6,783 to the total enlistments.

The two world wars of this century, especially the one just concluded, have proved that national defence is a combined operation which must be co-ordinated on a national scale. No longer is it possible for the Defence Services to administer its affairs in separate unrelated compartments. All must work together as a closely co-ordinated unit and under an integrated policy. Experience gained during the War of 1939-45 with the Axis Powers amply demonstrated this fundamental principle and the rapid disintegration of the enemy in Europe after the invasion of the Continent on June 6, 1944, was the direct result of its application. In particular, the experience of the War demonstrated the decisive importance of the technical initiative and of the role of science and industry in total war. In this field, Canada made a substantial contribution to the Allied cause. With the object of continuing effective integration of the common scientific research of the Navy, Army and Air Force and of civilian science and industry, the Government appointed, at the end of 1945, a Director General of Defence Research to head what will be, in effect, a fourth Defence Service.

The following sections review each of the Services.

## Section 1.—The Royal Canadian Navy

The Royal Canadian Navy has undergone two sweeping changes of organization within the past seven years. The outbreak of the War of 1939-45 found it equipped with six River class destroyers, averaging 1,500 tons, and five small minesweepers. Personnel consisted of 145 officers and 1,748 men of the permanent service (R.C.N.) and 222 officers and 1,807 men of the combined Royal Canadian Naval Reserve, Royal Canadian Naval Volunteer Reserve, and Royal Canadian Fleet Reserve.

During the War this force was expanded and became a very substantial naval force, with submarine-hunting corvettes, frigates and escort minesweepers predominating in the 368 warships in commission by 1945.

There were few naval operational areas that were not, sooner or later, the scene of R.C.N. activity. Its greatest undertaking was, of course, the war-long Battle of the Atlantic, in which merchant ships carrying 181,643,180 tons of supplies from North America to the United Kingdom, received Canadian escort protection. As the invasion of Europe approached, Canadian warships took over the entire close escort of North Atlantic convoys and provided many of the hunting groups. The actual invasion saw 109 R.C.N. ships and 10,000 officers and men engaged.

The 18 enemy submarines definitely destroyed by the R.C.N. and the 10 in whose destruction it shared, were hunted down in as widely separated waters as the Caribbean and the Mediterranean. Canadian warships became familiar with the waters of North Russia and the Aleutians, with the South Pacific and the China Sea. In addition to serving in their own vessels, 1,634 Canadian officers and 4,149 men were loaned to the Royal Navy and particularly outstanding contributions were made in the Fleet Air Arm and in Light Coastal Forces.

The second radical change has come with the return of peace. While it has brought a great reduction of the wartime force, the new fleet is many times more powerful than any peacetime Navy Canada has previously possessed. Designed as a balanced, two-ocean organization, it is, for the first time in R.C.N. history, built around big ships and makes allowance for the increasing importance of air power.

**The Main Fleet.**—Main units of the new force will be two "light fleet" aircraft carriers of 18,000 tons, one of which was in commission by the spring of 1946. Two 8,000 ton cruisers, seven large Tribal class destroyers, six lighter destroyers, make up the balance of the fleet. The now obsolete corvette has vanished from the picture; eighteen frigates and 12 Algerine type minesweepers are retained in reserve and for training purposes.

The following are the ships:—

**Light Fleet Aircraft Carriers—**

H.M.C.S. *Warrior*

H.M.C.S. *Magnificent*

**6-inch Cruisers—**

H.M.C.S. *Ontario*

H.M.C.S. *Uganda*

**Tribal Class Destroyers—**

H.M.C.S. *Micmac*

H.M.C.S. *Huron*

H.M.C.S. *Haida*

H.M.C.S. *Iroquois*

H.M.C.S. *Cayuga*

H.M.C.S. *Nootka*

H.M.C.S. *Athabaskan*

**V Class Destroyers—**

H.M.C.S. *Stioux*

H.M.C.S. *Algonquin*

**Crescent Class Destroyers—**

H.M.C.S. *Crescent*

H.M.C.S. *Crusader*

**River Class Destroyers—**

H.M.C.S. *Gatineau*

H.M.C.S. *Qu'Appelle*

The aircraft carriers are of the Colossus class, with a speed of 25 knots. Each will carry 30 'planes and a ship's company of more than 1,000. Personnel of the Royal Canadian Naval Air Arm is rounded out with men on loan from the Royal Navy Fleet Air Arm, in which force a number of Canadian members of this new division received their original training and served throughout the War of 1939-45.

The cruisers, 550 feet long, mount nine six-inch guns, and heavy anti-aircraft armament. They carry crews of nearly 800 and have a speed of more than 30 knots. H.M.C.S. *Uganda* was the one large Canadian ship of the present fleet to go into action during the War. H.M.C.S. *Ontario* was completed just in time to reach Japanese waters as hostilities ended.

The Tribals, fleet destroyers, are of about 2,000 tons and are the most heavily-armed vessels of their type. Three of them, British-built, saw much action in the closing years of the War. They are H.M.C.S. *Iroquois*, H.M.C.S. *Huron*, and H.M.C.S. *Haida*. The remaining four are notable as being the products of Canadian shipbuilders, and the first turbine warships ever built in the Dominion.

H.M.C.S. *Crescent* and H.M.C.S. *Crusader* are somewhat smaller destroyers than the Tribals and are thoroughly modern.

H.M.C.S. *Algonquin* and H.M.C.S. *Sioux* are Canadian "V" class fleet destroyers. They displace 1,700 tons and, while comparatively new ships, both have substantial battle records as units of Canada's wartime fleet.

H.M.C.S. *Qu'Appelle* and H.M.C.S. *Gatineau*, 1,350 tons, are older River class destroyers (retained for training purposes).

The frigates and Algerine minesweepers, war-developed as anti-submarine vessels, displace 1,445 and 1,000 tons, respectively.

Inclusion of bigger ships in the R.C.N. has provided sea-going training facilities for which it was previously necessary to send Canadians to the Royal Navy. Surplus wartime equipment has also made it possible to supply naval divisions with modern training gear on a generous scale.

Officers of the Royal Canadian Navy come from three sources: (a) Graduates from H.M.C.S. Royal Roads, the Royal Canadian Naval College at Esquimalt, B.C.; (b) Direct entry of certain specialists from the universities; (c) Promotions from the ranks.

To man these ships the personnel of the Royal Canadian Navy has been authorized at 10,000. During the interim period (until Sept. 30, 1947) this complement will contain not only permanent service R.C.N. men, who sign a five-year agreement, but will also draw on reservists who have extended their wartime enlistment until that date.

**The Reserve Fleet.**—The several Reserve organizations have now been incorporated in a single organization known as the Royal Canadian Navy (Reserve). Its strength will be built up to 18,000. Divisions of the R.C.N. (R) are established in 19 centres across Canada.

Training, operational and repair bases will be retained at Halifax and Esquimalt, both of which were greatly enlarged and modernized during the war years. Stress will be laid on a Navy trained under sea-going conditions.

The ships of the reserve fleet are:—

**Frigates—**

H.M.C.S. *Montreal*  
H.M.C.S. *Wentworth*  
H.M.C.S. *Springhill*  
H.M.C.S. *Port Colborne*  
H.M.C.S. *St. Stephen*  
H.M.C.S. *Beaconhill*  
H.M.C.S. *New Waterford*  
H.M.C.S. *Capilano*  
H.M.C.S. *La Hulioise*  
H.M.C.S. *St. John*  
H.M.C.S. *Charlottetown*  
H.M.C.S. *Royalmount*  
H.M.C.S. *Kirkland Lake*  
H.M.C.S. *Antigonish*  
H.M.C.S. *Levis*  
H.M.C.S. *Orkney*  
H.M.C.S. *Grouard*  
H.M.C.S. *Swansea*  
Algerine Class Minesweepers—  
H.M.C.S. *Border Cities*  
H.M.C.S. *Fort Frances*

H.M.C.S. *Kapuskasing*  
H.M.C.S. *New Liskeard*  
H.M.C.S. *Oshawa*  
H.M.C.S. *Portage*  
H.M.C.S. *Rockcliffe*  
H.M.C.S. *Sault Ste. Marie*  
H.M.C.S. *Wallaceburg*  
H.M.C.S. *Winnipeg*  
H.M.C.S. *Boniface*  
H.M.C.S. *Middlesex*  
Wooden Minesweepers—  
H.M.C.S. *Revelstoke*  
H.M.C.S. *Llewellyn*  
Motor Launches—  
H.M.C.S. *Q 121*  
H.M.C.S. *Q 116*  
H.M.C.S. *Q 124*  
H.M.C.S. *Q 106*  
Anti-submarine Yacht—  
H.M.C.S. *Sans Peur*  
Depot Ship—  
H.M.C.S. *Provider*

**Royal Canadian Navy (Reserve).** -There are two types of enlistment in the R.C.N. (R). Officers may be either Active or Retired. The first mentioned do periodic training. Retired officers may volunteer for training if they wish but it is not compulsory. Both classes are liable to mobilization in a time of emergency, though the latter are restricted to appointments within the limits of their age and physical ability.

Men are divided into Active and Emergency groups and are governed by the same conditions as apply to officers. They sign on for five-year periods. Authorized R.C.N. (R) Active complement is 18,000. There is no complement for Retired officers and Emergency men.

Naval Divisions are commanded by R.C.N. (R) Active officers, under whom are R.C.N. staff officers and instructors. The staff officers are instructional specialists. Naval divisions are not only the local training centres for Reservists but are recruiting offices for the R.C.N. The various Divisions and the Centres at which they are established are:—

H.M.C.S. Haligonian, Halifax, N.S.	H.M.C.S. Hunter, Windsor, Ont.
H.M.C.S. Queen Charlotte, Charlottetown, P.E.I.	H.M.C.S. Prevost, London, Ont.
H.M.C.S. Carleton, Ottawa, Ont.	H.M.C.S. Griffon, Port Arthur, Ont.
H.M.C.S. Catarqui, Kingston, Ont.	H.M.C.S. Chippawa, Winnipeg, Man.
H.M.C.S. Brunswick, Saint John, N.B.	H.M.C.S. Queen, Regina, Sask.
H.M.C.S. Montcalm, Quebec, Que.	H.M.C.S. Unicorn, Saskatoon, Sask.
H.M.C.S. Donnacona, Montreal, Que.	H.M.C.S. Tecumseh, Calgary, Alta.
H.M.C.S. York, Toronto, Ont.	H.M.C.S. Nonsuch, Edmonton, Alta.
H.M.C.S. Star, Hamilton, Ont.	H.M.C.S. Discovery, Vancouver, B.C.
	H.M.C.S. Malahat, Victoria, B.C.

Administrative and operational headquarters for the Royal Canadian Navy is at Naval Service Headquarters, Ottawa, Ont.

#### THE ROYAL CANADIAN NAVAL COLLEGE

The Naval Service Act of 1910, which authorized the establishment of the Royal Canadian Navy, provided for the creation of a college for training naval officers. Halifax was selected as the most suitable site, and the old naval hospital in the dockyard was chosen as being an adequate building for the Royal Naval College of Canada. It was recognized, however, that as soon as possible a more suitable building would have to be constructed. This naval hospital building had accommodation for 45 cadets. The college was opened in January, 1911, the naval staff being lent by the Admiralty while the civilian instructors were obtained in Canada. In October, 1910, the King's permission was obtained to add the prefix "Royal" to the title of the College, a privilege which that institution received before the Royal Canadian Navy itself.

After the explosion in Halifax harbour on Dec. 6, 1917, the College building remained standing with its walls and roof intact, yet its condition was such that the staff and cadets had to be sent to Kingston, Ont., for the ensuing term. In September, 1918, the College was transferred to Esquimalt where it remained until 1922. The move to Esquimalt had never been regarded as permanent but before a final location had been determined severe naval financial retrenchment removed the problem entirely. The estimates for the entire Service in 1922 were \$1,500,000. The College closed and for the next twenty years Canada's permanent naval officers received their training in the Royal Navy. The Admirals and other senior officers of to-day's R.C.N., however, had been produced before the R.N.C.C. passed from sight.

The modern version of the institution, the Royal Canadian Naval College at Royal Roads, B.C., started its first term in 1942. The change in name also represented a certain change in character. Although influenced by the fine traditions of the Royal Navy, it has a more distinctively Canadian character than was the case with the original College. It is located ten miles from Victoria on the former Dunsmuir estate. Surrounded by 600 acres containing some of the finest gardens in that beautiful area, the castle-like residence forms the administration centre of an establishment made up of both converted and newly constructed buildings. The College takes its name from the anchorage immediately offshore in the Straits of Juan de Fuca, "Royal Roads" having long appeared on early charts and records. A natural lagoon, separated from the Straits by a mile-long spit, provides year-round facilities for boatwork.

While the primary function of the College is to train men capable of assuming leadership in Canadian naval affairs, such a career is not obligatory for graduates. The only requirement for those who do not wish to continue in the R.C.N. is that they shall accept commissions in the R.C.N. (R) should their services be required. In the event of war, all graduates are liable for service if they are considered suitable in all respects.

In peacetime, a graduate returning to civil life following the two-year course can, if he wishes to qualify for a Master's or Mate's (Foreign Going) certificate in the Merchant Navy, be credited with one year's service at sea. Should he wish to continue his studies at a university, admission to second year applied science and first or second year arts may be gained. The extent of the university recognition of a graduate's standing depends on the quality of his passing-out certificate and the requirements of the institution concerned. A cadet must choose at the beginning of his second term whether he wishes to enter the Navy or civilian life on graduation.

Those proceeding into the Engineering Branch of the Service complete their advanced studies at the Naval Engineering College at Devonport, England. Electrical Branch graduates continue their courses at appropriate universities. The Executive Branch, comprising approximately 80 p.c. of the officer material required, and the Supply and Secretariat Branch, complete their training at sea and in the various naval establishments. Training cruises and, on occasion, familiarization flights in aircraft are included in a cadet's training.

Candidates for entry in the College must have reached the age of fifteen years, ten months, and not have reached the age of eighteen years, ten months. Entry is by competitive examination and interview. Several scholarships are available. The total cadet complement of the College is 110.

## Section 2.—The Canadian Army

### Subsection 1.—Pre-War Organization

The National Defence Act which came into force Jan. 1, 1923, provided for a Department of National Defence presided over by the Minister of National Defence. The organization of and the terms of service in the military forces of Canada (collectively called the "Militia") are prescribed in the Militia Act (R.S.C. 1927, c. 132). Under the Militia Act, the Canadian Militia was composed, at the outbreak of war in 1939, of an Active and a Reserve Militia. The Active Militia comprised the "Permanent" and "Non-Permanent" Forces.

Supplemental to, but not an integral part of the pre-war Militia were the Royal Military College, authorized Cadet Corps, and Rifle Associations and Clubs.

**The Active Militia.**—*The Permanent Force.*—The Permanent Force, Canada's Regular Army, with an authorized establishment of 10,000, had an actual strength of about 4,500 before the War of 1939-45. The duties of this Permanent Force were, broadly speaking, to provide the staffs required at National Defence Headquarters and the Military Districts, and to conduct schools of instruction and training depots for the Non-Permanent Active Militia. Enrolment was voluntary and enlistment was for a period of three years for General Service.

*The Non-Permanent Active Militia.*—The Non-Permanent Active Militia had an authorized strength of some 86,000 all ranks, while its actual enrolment was about 50,000 when war was declared in September, 1939. Enlistment into the Non-Permanent Active Militia was voluntary and part-time training took place throughout the year at schools conducted by the Permanent Force, at local armouries and at summer camps. The normal period of enlistment was three years.

*The Reserves of the Militia.*—The Reserves of the Active Militia comprised all Reserve categories of the Active Militia, namely: (a) Reserve of Officers (General List); (b) Corps Reserves and Reserve General Lists of Officers of the Non-Permanent Active Militia; (c) Reserve Regimental Depots; (d) Special Reserve List of technical officers.

**The Reserve Militia.**—A Reserve Militia was authorized but no units were formed under this portion of the Reserve.

### Subsection 2.—Wartime Establishment

**The Canadian Army Overseas.**—On Aug. 25, 1939, details of previously selected units of the Canadian Militia were called out under Section 63 of the Militia Act to guard "vulnerable points" across the Dominion of Canada. One week later, orders were issued for the mobilization of certain selected Militia units, both Permanent and Non-Permanent, and these units, together with the required staffs, were placed on Active Service under Section 64 of the Militia Act. On Sept. 10, 1939, the Canadian Government formally entered into a state of war with the German Reich. During the weeks that followed, two infantry divisions were mobilized. In November, Canadian Military Headquarters was established at London, England, under Brigadier (later General) H. D. G. Crerar, and in December, the 1st Canadian Division, under the command of Major-General (later General) A. G. L. McNaughton, disembarked in Scotland—the first of the five divisions that were despatched overseas. By Apr. 1, 1940, the strength of the Canadian Army Overseas, including the 1st Canadian Division and ancillary troops, and the staff of Canadian Military Headquarters, totalled 23,408 all ranks.

The Allied defeats in Europe in the months of May and June of 1940 brought prompt decisions towards a strengthening of Canada's Forces abroad and defences at home. The despatch abroad of the 2nd Canadian Division and reinforcements for the 1st Division was accelerated, and the 3rd Canadian Division was authorized to mobilize. To increase the effectiveness of the home defences and the defences of territories of strategic importance in relation to extended lines of communication,

action was taken in consultation with the British Government to garrison Iceland with a mixed force of Imperial and Canadian troops. Canadian forces were also despatched to strengthen the defences of Newfoundland, Jamaica and Bermuda. Following the evacuation of the British Expeditionary Force from Dunkirk in June, the mobilization of the 4th Division was ordered.

On Dec. 25, 1940, the Canadian Corps was formed in the United Kingdom, consisting of the 1st and 2nd Divisions and Corps Troops.

Lessons of the campaign in France had been studied during the year by the British Imperial Staff, and observations of the German successes pointed to: (a) The necessity for providing a greater degree of anti-aircraft defence and anti-tank protection; (b) increased mobility; and (c) greatly increased use of armoured units.

The reorganization planned as a result of these studies involved considerable changes in the structure of Corps and Divisions, and the Canadian Army was reorganized to conform to the new British establishments and Orders of Battle.

By Apr. 1, 1941, a rapid expansion of the Canadian defence forces had been effected, reaching a total strength of 367,920 all ranks. This total was divided as follows:—

Active Army Overseas.....	66,037
Active Army in Canada.....	117,676
Reserve Army in Canada.....	104,006
Reserve Recruits trained or under training under the provisions of the National Resources Mobilization Act ....	80,201

During the summer of 1941 the 3rd Canadian Division was despatched overseas. The 1st Canadian Army Tank Brigade, which had been organized in 1940, was despatched abroad, where, after a suitable period of intensive training, it was included in the Order of Battle of the Canadian Corps. Later during this same year the 5th Canadian Armoured Division, which had been organized in Canada, reached England. The number of ancillary units necessary to maintain this larger force overseas was correspondingly increased. Some of these units were formed overseas, but the majority were organized in and despatched from Canada.

In November, 1941, two infantry battalions and a brigade headquarters were sent to strengthen the British garrison at Hong Kong. After a valiant stand they were forced to surrender to overwhelming Japanese forces on Dec. 25, 1941.

By Mar. 31, 1942, the forces in the United Kingdom had grown to a Corps of three divisions, an Army Tank Brigade, an Armoured Division, and an expanded quota of ancillary units. The total of forces overseas was in excess of 130,000.

During 1942, further organizational changes were undertaken. The most important of these was the formation of an Army Headquarters and an additional Corps Headquarters. Headquarters, First Canadian Army, under the command of Lieutenant-General A. G. L. McNaughton, came into being on Apr. 6, 1942. During the year the 4th Canadian Division was converted from an infantry to an armoured division and was despatched to England. A second Army Tank Brigade was organized. In the same year the 1st Canadian Parachute Battalion, which later became part of the British 6th Airborne Division, and the 1st Canadian Special

Service Battalion, which served as the Canadian component of the combined Canadian-United States Special Service Force, were formed. Both of these units subsequently saw service in Europe.

As in previous years, the organization of the Army Overseas continued to require detailed changes in units and establishments in order to reflect similar changes in organization of the British Army made in the light of battle experience. During the year ended Mar. 31, 1944, the main effort was directed towards the completion of the requirements of the Overseas Forces and the consequent movement from Canada of the necessary units and personnel estimated to be required to maintain the Army in the offensive operations then anticipated. The reorganization of the Canadian Forces in order to obtain a greater degree of conformity to British Army organization continued, and included the formation in February, 1944, of a Corps of Royal Canadian Electrical and Mechanical Engineers. This new Corps assumed responsibility for all engineering and maintenance functions, both mechanical and electrical, formerly carried out by the Royal Canadian Ordnance Corps, and certain engineering and maintenance functions which up to this time had been carried out by the Royal Canadian Artillery, Royal Canadian Engineers, and Royal Canadian Corps of Signals.

During 1943 the 1st Canadian Infantry Division and the 1st Canadian Tank Brigade took part in the Sicilian campaign; later in the year they were joined by Headquarters 1st Canadian Corps and the 5th Canadian Armoured Division. As part of the British Eighth Army, the 1st Canadian Corps fought in Italy. In 1944-45, the First Canadian Army, under the command of General H. D. G. Crerar, including the 2nd and 3rd Canadian Infantry Divisions, the 4th Canadian Armoured Division, and the 2nd Canadian Armoured Brigade, together with British and Polish formations, contributed to the Allied victory in northwest Europe, and participated in the closing phases of the War against Germany.

The repatriation and demobilization of the Canadian Army Overseas began shortly after V-E Day in May, 1945, and was virtually complete by the spring of 1946.

**The Army in Canada.**—At the beginning of the War, the operational troops of the Army in Canada were employed in guarding vulnerable points throughout the country, and in manning the defences of the east and west coasts. Subsequently "Vulnerable Points" became the responsibility of the Royal Canadian Mounted Police. By the end of March, 1940, the strength of the Army in Canada, exclusive of units being organized for despatch overseas, amounted to 31,451.

During the year 1940-41, fixed fortress defences were improved and augmented on the east and west coasts. Steps were taken to increase the strength of the coastal defences by the concentration of a force comprising a complete division within the Atlantic area. The organization of Atlantic and Pacific Commands to provide for improved operational control of the field forces within the Military Districts adjoining coastal areas was authorized.

In May, 1940, the Veterans Guard of Canada, comprised of men who had served in the War of 1914-18, was formed to undertake the guarding of prisoners in Internment Camps and other duties in connection with internal security. The National Resources Mobilization Act was passed in June, 1940, authorizing the Governor General in Council to require "persons to place themselves, their services

and their property at the disposal of His Majesty in the right of Canada as may be deemed necessary or expedient for securing the public safety, the defence of Canada, the maintenance of public order, or the efficient prosecution of the War, or for maintaining supplies or services essential to the life of the community", with the exception that persons could not be compelled to serve outside of Canada and its territorial waters. This restriction was subsequently removed by amendment. The first recruits were called up under this Act for thirty days' training in October, 1940. In 1941 the period of training was extended to four months, and the trainees were posted to Army units in Canada for the duration of the War.

The necessity of training reinforcements for the Canadian Army Overseas and the recruits called up under the National Resources Mobilization Act necessitated the organization of additional training centres during 1940 and 1941. By the end of March, 1941, the strength of the Army in Canada had grown to 86,929 all ranks.

The formation of the Canadian Women's Army Corps was authorized in August, 1941. From September, 1941, to March, 1942, the Corps functioned as an auxiliary to the Army. In March, 1942, it became officially a Corps of the Active Militia of Canada.

On the entry of Japan into the War in December, 1941, additional measures were taken to strengthen the Army in Canada. Early in 1942, the Order of Battle of the 6th Division, of which three Infantry Brigades had been formed in 1941, was completed. The effective strength of the defence forces of the Dominion was increased by intensifying the training of certain units of the Reserve Army, which were grouped as Reserve Brigade Groups with Active Army commanders and staffs.

In March, 1942, the Army in Canada, with a strength of 156,667 (which included reinforcements in training for the Army Overseas and administrative units), was further increased. Coast and anti-aircraft defences were augmented and in the spring and summer of that year the Brigade Groups of the 7th and 8th Divisions were authorized to mobilize.

In the next year, owing to the general improvement in the over-all strategic position, these two latter formations were disbanded and certain artillery units were withdrawn from vulnerable areas of secondary importance. In the latter part of 1944 the 6th Division, which had been retained as a reserve against future need, was disbanded and personnel of the units concerned were made available as reinforcements for overseas.

**The Canadian Army Pacific Force.**—The Army component of the Canadian Army Pacific Force was set at 30,000 all ranks, including an Infantry Division, a Tank Battalion and certain ancillary units. The organization, training and equipment of this force conformed to the United States Army practice, and the force was to operate as part of a United States formation. Upon the defeat of Japan the force was released from its commitment and disbanded.

**The Canadian Army Occupation Force.**—The Canadian Army Occupation Force in Germany, including the Canadian sections of the British Hanover Corps District Headquarters, British Zone, amounted to a total commitment of 20,000 all ranks. This force included an Infantry Division, and Base and Line of Communication Troops.

### Subsection 3.—Post-War Organization

The post-war organization provides for a general regrouping of pre-war units, and for the formation of five operational commands embodying the eleven pre-war military districts. The Canadian Land Forces will in future be designated "The Canadian Army" (instead of "The Militia of Canada"), and will comprise:—

- (a) The "Active Force" (instead of the "Permanent Active Militia") consisting of units of all arms, coast defence units, training and school establishments, headquarters, research and development and intercommunication units, and services.
- (b) The "Reserve Force" (instead of the "Non-Permanent Active Militia") comprising personnel engaged voluntarily to serve for a three-year period, who will train on a part-time basis for a period of not more than 45 days in each year.
- (c) The "Supplementary Reserve" consisting of units and personnel not subject to, but not precluded from annual military training.

---

### THE ROYAL MILITARY COLLEGE

The Royal Military College of Canada was founded in 1876 by the Honourable Alexander Mackenzie, then Prime Minister of Canada. From its foundation up to 1942, 2,788 gentlemen cadets were enrolled. In 1942 Cadet training at the Royal Military College ceased, to make room for essential war purposes.

The Royal Military College as a cadet college has a very distinguished record in connection with wars fought since its foundation. Of the 2,338 graduates and ex-cadets who have served in wars fought by the British Empire, 273 were reported as killed in action, died of wounds, or missing. Ex-cadets of the college won the following honours and decorations: 2 Victoria Crosses; 1 George Cross; 219 Distinguished Service Orders; 162 Military Crosses; 22 Distinguished Flying Crosses; 582 other British decorations; 200 foreign decorations. Fifty-seven ex-cadets have attained the equivalent rank of Major-General or higher in the Armed Forces of the British Empire.

The establishment of the College, as stated in the Act of 1874 (37 Vict., c. 36) was "for the purpose of imparting a complete education in all branches of military tactics, fortifications, engineering, and general scientific knowledge in the subjects connected with and necessary to a thorough knowledge of the military profession, and for qualifying officers for command and staff appointments". In addition to the foregoing, the cadet course of instruction was such as to afford a thorough practical and scientific training in civil engineering, surveying, physics, chemistry, English and French. The strict discipline that was maintained was a valuable feature, and the constant practice of gymnastics, riding, drills and outdoor exercises of all kinds promoted the health and good physical condition of the cadets.

The College is situated one mile from Kingston on the St. Lawrence River where it emerges from Lake Ontario. The buildings of the College proper occupy a beautiful peninsula of 60 acres, lying between the mouth of the Cataraqui River and Navy Bay. Additional adjacent grounds, on which stands the historic Fort Henry,

make up a total of about 500 acres which are at the disposal of the College for use as a training area. On the point of the peninsula is situated Fort Frederick, built in 1837 just before Kingston became the capital of the "Province of Canada", the Fort forming part of the defences of Kingston at that time. The College is under the supervision of the Department of National Defence, and was inspected annually by an advisory board composed of leading Canadian citizens, both civil and military, which made its report and recommendations to the Minister of National Defence. The College is commanded by a Commandant, who is assisted by a Director of the Canadian Staff College and a competent staff of civil and military professors and instructors.

The pre-war four-year Cadet course led to a 'diploma with honours', a 'diploma' or a 'certificate of military qualification'. A number of commissions in the Canadian Permanent Force and the Royal Canadian Air Force, as well as commissions in the British Regular Forces, the Indian Army, and the Royal Air Force, were offered annually to graduates. For cadets who desired to obtain commissions in the Royal Canadian Navy a limited number of Naval Cadetships were available each year to cadets who successfully completed the first two years of study, and who were not over 20 years of age on the first of September of the year in which they desired to enter the Navy. To those graduates joining the British Army, the privilege of one and one-half years seniority was granted. This had been arranged in order to equalize the seniority of graduates of the Royal Military College of Canada with those of the Royal Military Academy, Woolwich, or the Royal Military College, Sandhurst, since the courses at the latter institutions are shorter than the Canadian.

The principal Canadian universities admitted recommended graduates to the fourth year of their civil engineering courses and to the third year of other engineering courses; and some of the universities admitted graduates to the third years of arts and science courses. Cadets in their graduating year were, in recent years, allowed to take special courses in mechanical, electrical, and mining engineering which, subject to recommendation, permitted them to enter fourth year in these subjects at University.

The R.M.C. diploma was accepted by the law societies and bar associations of Nova Scotia, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia as the equivalent of a B.A. degree for admission to the study of law. The Dominion Association of Chartered Accountants likewise accepted R.M.C. graduates as registered students under the same conditions as university graduates.

Entrance to the College was on a competitive basis. Candidates were required to pass a rigid medical examination, and to have obtained junior matriculation or an acceptable equivalent.

During the war years 1942-45, the College was used as a centre for many different types of courses for officers, the principal ones being Canadian War Staff Courses, of which there were 12 intermediate courses and 7 junior courses run and 1,072 officers qualified as trained staff officers.

The Royal Military College has been chosen as the site of the Canadian Staff College which will commence in June, 1946, to train for staff employment officers from the Canadian Army, the R.C.A.F., and, on a limited scale, officers from the armies of other countries in the British Empire.

The future of the College as a cadet institution has not as yet been decided.

### Section 3.—The Royal Canadian Air Force

The Royal Canadian Air Force, composed of a Regular or Permanent Force, Auxiliary and Reserve Forces together with a Women's Division and the Air Cadets, developed considerably during the war years. On Sept. 10, 1939, the Regular and Auxiliary Force had 4,606 officers and men. At its peak in December, 1943, the R.C.A.F. numbered 206,350 of whom 15,153 were women. Forty-eight squadrons took part in operations overseas and many thousands of its personnel were sent to Royal Air Force squadrons and other units scattered all over the world. Another 40 squadrons were held in Canada for home defence. In addition, the R.C.A.F. undertook the operation of the British Commonwealth Air Training Plan, whereby 131,553 trained members of aircrew were provided for British and Dominion Air Forces (see pp. 1090-1099).

To facilitate the transition from wartime to peacetime conditions, an Interim Force has been set up which will continue in existence until Sept. 30, 1947, when a plan for a permanent establishment, authorized in February, 1946, will go into effect.

The peacetime Permanent Force is to consist of Regulars, Auxiliaries and Reserves and will contain fighter, bomber and transport squadrons together with their necessary ancillary units. There will be eight operational squadrons and eight composite flights in the Permanent Force with a total strength of 16,100 officers and men. Two bomber-reconnaissance, two transport, one fighter-reconnaissance, one fighter-bomber, one air observation and one photographic squadron will comprise the operational force. The composite flights will provide for communications, air-sea rescue, target-towing, gliding, and practice flights for members of aircrew engaged in administrative duties. Both the glider unit and the air observation squadron will employ Army as well as Air Force personnel.

Fifteen auxiliary squadrons are projected. These will have a total strength of 4,500 officers and men. Ten of these squadrons will be fighters, three fighter-bombers and two fighter-reconnaissance. The auxiliary squadrons will be situated, so far as possible, at those cities the names of which were used by operational squadrons during the War. Collectively they will provide a force, fully organized, manned and equipped so that they can be mobilized as a Tactical Air Force for co-operation with the Army in a manner similar to that whereby R.C.A.F. wings formed a part of the Second Tactical Air Force in 1944-45.

The Air Cadets will continue, as in the past, to prepare young men for entry into the Regular and Auxiliary Forces or into civil aviation.

The Department of National Defence for Air will also employ a number of civilians. These employees on Mar. 31, 1946, numbered 5,936.

It is estimated that the cost of the Regular Force will be \$55,650,000 per annum, of the Auxiliary Force \$3,000,000 and of the Reserve about \$500,000. The annual total for the R.C.A.F. will therefore be \$59,150,000.

The Air Force is at present administered from Ottawa, Ont. Under the Minister of National Defence for Air are a Deputy Minister, the Chief of the Air Staff and four other members of the Air Council. Under the direction of Air Force Headquarters are five geographical commands. These commands on Mar. 31, 1946, were: No. 1 Air Command (Trenton); No. 2 Air Command (Winnipeg); Eastern Air Command (Halifax); Western Air Command (Vancouver); and North West Air Command (Edmonton). Maintenance Command (Uplands), created

in August, 1945, directs and co-ordinates supply, equipment, aeronautical and construction engineering and aeronautical inspection services throughout the Air Force. Besides these, other higher formations were: No. 9 Transport Group (Rockcliffe); R.C.A.F. Overseas Headquarters (London, England); Air Member Canadian Joint Staff (Washington, D.C.); and the Air Attachés (Washington, D.C., and Paris, France).

The R.C.A.F., on Mar. 31, 1946, had five squadrons with ancillary units and 9,025 officers and other ranks still overseas. The grand total effective strength on the same date was 37,272, including civilians.

The R.C.A.F. maintains a Staff College at Toronto, Ont., where senior officers are trained for command and staff positions. At the School of Aviation Medicine, Toronto, Ont., there are facilities for consultant and specialist officers, laboratories for nutritional activities in relation to messing, a statistical section, well-equipped laboratories, a human centrifuge, a cold low-pressure chamber and a tropical room.

In aircrew training the tendency towards a high degree of specialization developed during the War has already shown signs of diminishing, it being considered advisable that each member of a crew should know as much as possible about the duties of the others. The same trend is noticeable in groundcrew training. In co-operation with the Navy and Army, the R.C.A.F. has standardized many trades and the same names for the same trades are being used throughout the three Services.

#### THE BRITISH COMMONWEALTH AIR TRAINING PLAN — A SUMMARY OF THE R.C.A.F.'S MAJOR ROLE IN THE WAR OF 1939-45

##### Historical Sketch

The battle of Waterloo, it has been said, was won on the playing fields of Eton. The historian of the War of 1939-45 may, with some justification, record that the air battle of Europe was won on the flying fields of Canada. This story can now be told in the proper perspective. For five years the Dominion was a great aerodrome where, in the schools of the British Commonwealth Air Training Plan, over 130,000 aircrew were trained for service with the Royal Air Force, the Royal Australian Air Force, the Royal Canadian Air Force and the Royal New Zealand Air Force.

The Plan had its inception in an Agreement signed Dec. 17, 1939, at Ottawa, by representatives of the Governments of the United Kingdom, Canada, Australia and New Zealand. The Government of Canada was designated as administrator of a co-operative air-training scheme capable of producing, when fully developed, 520 pilots with elementary training, 544 pilots with service training, 340 observers and 580 wireless operator-air gunners every four weeks. To meet this objective 3 Initial Training Schools were to be established, 13 Elementary Flying Training Schools, 16 Service Flying Training Schools, 10 Air Observer Schools, 10 Bombing and Gunnery Schools, 2 Air Navigation Schools and 4 Wireless Schools. In addition there were to be schools for the training of the necessary staff, and appropriate command, recruiting and maintenance organizations, embracing schools for air armament, aeronautical engineering, administration, equipment and accounts, flying instructors and technical training, as well as recruit, repair and equipment depots and a record office—a grand total of 74 units. The first three flying schools were to open in May, 1940, and all were to be in operation by the end of April, 1942.

The task thus entrusted to the Royal Canadian Air Force, which became the general manager of the Plan, was a tremendous undertaking. When the War began

the R.C.A.F., numbering about 4,000 officers and men, was called upon to produce almost five times that many fully trained aircrew annually. Undaunted by the magnitude of the task the Force, ably assisted by civilian flying clubs throughout the Dominion, set to work: the first schools opened on schedule and all units of the original program (with the exception of three Bombing and Gunnery Schools) were in operation by the end of September, 1941, seven months ahead of schedule. Further, 8 Elementary Flying Training Schools had been established in addition to the 13 originally planned.

Between May, 1940, and September, 1941, the Plan had to face a crisis upon which its whole fate depended. France fell, and Britain stood alone in the breach, with the massed strength of Nazidom only 27 miles across the Channel. There was a strong temptation to scrap the British Commonwealth Air Training Plan and hurry every available pilot and aircraft to meet the threatened invasion. The Plan required time for development, time to make its effect felt in the field of battle. Many feared, in the spring and summer of 1940, that there was no time to spare. Fortunately, the long-range view prevailed, the Plan was continued—and history has recorded the verdict.

The original partnership was to remain in force until Mar. 31, 1943, but before that date a new Agreement was signed at Ottawa, on June 5, 1942, to continue until Mar. 31, 1945. The number of training units was increased from 58 to 67 (including 21 double schools) with 10 additional specialist schools. The following statement compares the two programs:—

	1939 <i>Plan</i>	1942 <i>Plan</i>
TRAINING UNITS—		
Initial Training Schools (I.T.S.).....	3	7
Elementary Flying Training Schools (E.F.T.S.).....	13	16 (12 were to be double schools)
Service Flying Training Schools (S.F.T.S.)	16	20
Air Observer Schools (A.O.S.) and Air Navigation Schools (A.N.S.).....	12	10 (9 were to be double schools)
Bombing and Gunnery Schools (B. and G.S.)	10	10
Wireless Schools.....	4	4
TOTALS, TRAINING UNITS.....	58	67
SPECIALIST SCHOOLS—		
General Reconnaissance School (G.R.S.)..	—	1
Operational Training Units (O.T.U.).....	—	4
Flying Instructors' Schools.....	—	3
Central Flying School.....	—	1
S.B.A. and Link Trainer School.....	—	1
GRAND TOTALS.....	58	77

Further details concerning the personnel of these schools are given at pp. 1096-1098.

In addition, the R.C.A.F. was given the administration of 27 R.A.F. units (6 E.F.T.S., 10 S.F.T.S., 3 A.N.S., 1 B. and G.S., 1 G.R.S., 4 O.T.U., 1 Radio School and 1 Personnel Depot) which that Force had transferred to or established in Canada.

The Plan reached its peak at the close of 1943 with 73 B.C.A.T.P. and 24 R.A.F. flying schools in operation, complemented by 184 ancillary units. Early in the following year, by the Power-Balfour Agreement of February, 1944, it was arranged, in view of the large reserve of aircrew already trained or under instruction, to begin

gradual reduction of pupil intake and schools. In October, 1944, the closing of schools was accelerated so that the Plan might terminate, as scheduled, on Mar. 31, 1945. By the close of 1944 the number of B.C.A.T.P. schools had been reduced to 50 and those of the R.A.F. to 2; schools and units remaining on Mar. 31, 1945, were absorbed by the R.C.A.F. During the five years that the Plan was in operation approximately 360 schools and ancillary units had been established on 231 sites. From these schools had come 131,553 aircrew graduates to take their places in the R.A.F., the R.A.A.F., the R.C.A.F., and the R.N.Z.A.F. Thirty-eight out of every 100 graduates were pilots (49,808); 23 navigators, including navigators "B" and "W" (29,963); 12 air bombers (15,673); 14 wireless operator-air gunners (18,496); 12 air gunners (15,700 including 704 naval air gunners); and the hundredth was a flight engineer (1,913). The R.C.A.F.'s contribution was the largest, representing 55.4 p.c. (72,835) of the total; the R.A.F. provided 32 p.c. (42,110), the R.A.A.F. 7.3 p.c. (9,606), and the R.N.Z.A.F. 5.3 p.c. (7,002).

Behind these simple statistics lies a story of achievement unparalleled in Canadian history—a story written not only by instructors and pupils whose yellow-painted trainers were so familiar a sight in Canadian skies, but written also by service and civilian personnel working in offices and factories, doing all the tasks necessary to convert blue-prints into flying schools, get aircraft into the air and keep them flying.

### Details of the Main Plan

**Construction Engineering Program.**—The initial burden of putting the B.C.A.T.P. into operation fell most heavily upon the Construction Engineering and Equipment Divisions of the R.C.A.F. Before pupils could begin training it was necessary to select sites, erect hangars and barracks, prepare runways and roads, and procure aircraft, engines, trucks, clothing, and all the other necessary supplies.

The small Construction Engineering Section of 1939 was expanded by recruiting engineers, designers and draftsmen from civilian life, and invaluable assistance was given by R.A.F. specialist officers who came to Canada early in 1940. When the Plan was initiated no standard design existed for hangars, accommodation buildings, mess halls and other structures. Plans for these and other buildings, which became necessary as technical training equipment was perfected (e.g., turret-training buildings), were developed chiefly at Air Force Headquarters at Ottawa, where 30,000 sketch plans and drawings were prepared and approximately 1,500,000 blue-prints issued.

The first contract was awarded in February, 1940; by the late summer of that year over 500 had been signed, involving expenditures totalling about \$60,000,000. The peak was reached in 1942 when 1,000 contracts were awarded for an aggregate expenditure of \$80,000,000. Thereafter the number decreased sharply until, in the last year of the Plan's operation, there were slightly more than 100 contracts for about \$4,000,000. Contracts ranged from large double-size flying schools to relatively small relief fields, and covered the construction of buildings of all types, the installation of water, electrical, heating and sewage systems, and the laying of railway spurs, runways, roads, parade grounds and footpaths.

Pre-war airfields served as a starting point for flying training, but it was necessary to enlarge them and construct many new ones and the required satellites. The Department of Transport undertook the construction and extension of runways and laid 35,000,000 square yards of asphalt or concrete, the equivalent of a 20-foot

highway extending 2,700 miles—or from Ottawa to Vancouver. The Canadian climate with its extremes of heat and cold presented a major problem in airfield maintenance. To ensure continuous 24-hour flying serviceability during the winter, special snow-handling equipment was devised and definite programs of snow compaction, removal, or a combination of the two, were organized.

Approximately 7,000 hangars, accommodation buildings and drill halls were designed and constructed, with all the requisite heat, water and sewage facilities, including central boiler stations, individual hot-air heaters, water-pumping stations, storage reservoirs and tanks, sewage treatment plants, and gasoline and oil storage tanks. On many sites it was also necessary to design an electric power system, using diesel, steam or gasoline generator plants. The strain that this program, which coincided with large-scale projects on behalf of the other Services, placed upon the manufacturing facilities of Canada often necessitated control and restriction of material. Frequently improvisation was necessary, especially in the early days of mushroom growth when, in many instances, "more ingenuity than engineering skill" was required from the mechanical and electrical engineering staff. Despite this, a high standard was set and maintained.

**Equipment.**—In problems of supply, as in those of construction engineering, the success of the B.C.A.T.P. owed much to the help received from qualified equipment officers of the R.A.F. who, in the early days of the Plan, occupied key positions at Air Force and Command Headquarters. The R.C.A.F. had few qualified equipment officers available at the outbreak of war and, until these could be reinforced by men with industrial experience drawn from civil life, the assistance received from the Air Ministry was invaluable.

The task of equipping the vast B.C.A.T.P. organization—tremendous even under normal conditions—was greatly complicated in the summer of 1940, when development was getting into its stride, by the inability of the United Kingdom to provide aircraft, engines and other material, which it had originally agreed to supply as its contribution to the cost of the Plan. Even when the menace of invasion had receded, the submarine campaign in the Atlantic at times made the flow of supplies from the United Kingdom uncertain. Spares for Battle and Anson aircraft and for Cheetah and Merlin engines were in especially short supply and for a time the training program suffered.

A further complication, when the Plan began, was the shortage or complete lack in Canada of every considerable item from complete aircraft down to the smallest detail of personal equipment. For example, the R.C.A.F. in September, 1939, had only 191 airframes and 267 engines suitable for training and many of these were obsolescent. Since much of the equipment necessary for the Plan had to be obtained from British and United States sources, R.C.A.F. liaison offices were established in the United Kingdom and the United States to handle supply matters and facilitate deliveries.

Through the Department of Munitions and Supply the manufacture in Canada of all possible types of equipment was undertaken with such energy and vigour that in the case of certain items, e.g., aircraft instruments and electrical equipment, production exceeded Canadian requirements and it was possible to provide quantities for the United Kingdom.

Plan requirements reached a peak in 1943 and then reduction began, presenting problems almost as complex as the earlier days of expansion. Future requirements

had to be calculated carefully and surplus stocks disposed of. Aircraft and engines retained for future needs were placed in stored reserve, while surplus stocks were allotted to special storage for disposal by the War Assets Corporation.

**Aeronautical Engineering.**—In September, 1939, the R.C.A.F. had only 24 aeronautical engineering officers and about 1,000 technical non-commissioned officers and skilled tradesmen. These were augmented by 12 experienced R.A.F. officers and a considerable number of professional engineers and technicians recruited from civilian life. Upon these men fell the initial burden of getting the Plan airborne and maintaining the aircraft in serviceable condition, despite lack of spare parts, tools, and ground equipment.

The spare parts situation became critical in the late summer of 1940 when the *Luftwaffe* 'blitzed' Britain's industrial centres, and U-boats began to prey upon Atlantic convoys. Steps were taken to start manufacture of tools and spare parts in Canada, but in the interval, before these supplies came into production, engineering officers were forced to use many ingenious devices to maintain aircraft serviceability. Fortunately their initiative and resourcefulness did not fail.

In 1943, the peak year of the Plan, aircraft flew 7,000,000 hours, setting a record of 677,000 hours in the month of July. Despite the pressure which was placed upon the maintenance staffs, immediate aircraft serviceability averaged 77 p.c. throughout the year. For 48-hour serviceability the annual average was over 86 p.c. In 1944, when the situation had eased with gradual reduction of the Plan, serviceability figures continued their steady rise to an average of 87 p.c. in the fourth quarter of the year.

The Battle aircraft used in B. and G. Schools in the early period of the B.C.A.T.P. presented many maintenance problems to the engineering staffs, as did the conversion of Bolingbroke aircraft for gunnery training purposes. Other difficulties were encountered with the Cornell and its Ranger engine. Coupé tops, cockpit heating, blind-flying instruments and night-flying equipment had to be engineered, and the engine modified to remove certain faults.

To facilitate rapid production of aircraft in Canada, the design and development engineers of the R.C.A.F. re-designed equipment to suit local manufacturing facilities. For example, five types of the Anson Twin-Engine Trainer were developed for different engines and to incorporate various modifications.

All types of aircraft had to be adapted for operation in Canadian winter weather. Considerable investigation and development were necessary for each individual type, to devise oil dilution, cabin heating, and carburettor, windscreen and propeller de-icing equipment.

Other problems claiming the attention of the aeronautical engineers, in collaboration with manufacturers, were the development of compressed-wood propeller blades, the Hoover controllable-pitch hub, porous chrome plating for worn cylinder barrels, centrifugally cast cylinders, and rubber substitutes, such as synthetic aircraft tires, fuel lines and electrical cable. R.C.A.F. engineers also designed a cartridge type of practice bomb, cheaper and technically better than the acid-filled model.

R.C.A.F. repair depots played an important part in the Plan in salvaging aircraft. In 1943 about 990 damaged aircraft were salvaged, many from isolated locations. Repair and overhaul was done by civilian contractors with the repair depots assisting when the demand exceeded their capacity. When the Plan began,

facilities for airframe and engine overhaul in Canada were virtually negligible; by 1943, however, there were 147 civilian contractors handling \$188,000,000 worth of work.

**Personnel.**—The first need in personnel was for flying instructors and ground staff to man the schools as they were opened. Canadian 'bush' pilots and United States commercial pilots supplied a nucleus of instructors, while veterans of 1914-18 filled many of the administrative posts. The R.A.F. also provided over 250 personnel for staff positions in the first months of 1940. Further expansion in staff was met largely by graduates from Plan schools who were trained as instructors and retained for duty in Canada. This policy was followed by all four partners in agreed proportions. Staff strength reached a peak in December, 1943, when 104,113 service and civilian personnel were employed. When the Plan terminated over 66,000 were on the staff. Members of the Women's Division of the R.C.A.F., which was organized in the summer of 1941 and enrolled almost 17,000 recruits, played an active and important part in the expansion and success of the Plan.

In the original agreement of December, 1939, it was stipulated that the United Kingdom would provide up to 10 p.c. of the pupil intake necessary to produce the required number of aircrew graduates; Canada would supply about 70 p.c., Australia 10-12 p.c. and New Zealand 6-10 p.c. In the revised Agreement of 1942 the United Kingdom undertook to send not less than 40 p.c. of the pupils required to fill the courses. So far as Canada was concerned there was no shortage of aircrew recruits except in the summer of 1943. Indeed at times the rush of recruits was so great that surplus applicants, beyond the capacity of the Plan to accept for immediate training, were assigned to guard duty until required. In February, 1941, the policy was adopted of placing surplus recruits on leave without pay, to be recalled when needed.

Through the Air Cadet League of Canada and the War Emergency Training Program potential aircrew and ground crew were given preliminary training under R.C.A.F. direction.

Exhaustion of the pool of aircrew reserve in the summer of 1943 was relieved by acceleration of pre-aircrew training courses, a program of co-operative recruiting with the Army, and remusterings from ground to aircrew. An adequate supply of trainees was then available until early in 1944, when, with the reduction of the Plan, quotas were lowered, and finally, in June 1944, enlistments were suspended. A surplus of trained pilots necessitated some re-allocation of personnel under instruction. Approximately 4,200 R.C.A.F. pre-aircrew personnel were discharged for transfer to the Army, and over 10,000 graduates surplus to immediate needs were transferred to the Reserve, subject to recall as required. By Nov. 6, 1944, all untrained aircrew had been posted to courses to be graduated before Mar. 31, 1945.

The total number of R.C.A.F. intake for Plan schools was 103,000 (enlistments and remusters) of whom 91,113 began training. The three overseas partners maintained a steady flow of aircrew to Canada except for a short period immediately following the outbreak of war with Japan in December, 1941. The total number of trainees from all four partners (excluding those who entered too late to complete their courses by Mar. 31, 1945) was 157,614. Of these, 26,061 failed to graduate for one reason or another. Pupils who failed in their courses were carefully re-examined for remustering to another aircrew trade. More than 50 p.c. of the failures were thus salvaged by reselection boards and resumed training in another aircrew category.

## AIRCREW INTAKE FOR THE BRITISH COMMONWEALTH AIR TRAINING PLAN

<i>Service</i>	<i>Trainees</i>	<i>Graduated</i>	<i>Casualties</i>
R.C.A.F.....	91,113	72,835	469
R.A.F.....	48,576	42,110	291
R.A.A.F.....	10,350	9,606	65
R.N.Z.A.F.....	7,575	7,002	31
	157,614	131,553	856

One significant development of the Plan was the introduction in October, 1941, of scientific tests to determine "ability to learn" of aircrew applicants, rather than, as previously, to judge them by formal educational standards. Selection of trainees was further modified a year later by making the classification into specific categories at Manning Depots instead of on enlistment. In 1943, use of the visual Link Trainer was adopted as an aid in the primary classification of trainees at the Depots. Recruits provisionally selected for pilot, navigator or bomber were then sent to Initial Training Schools before final selection for one of these trades.

Mention should be made of the contribution to the success of the B.C.A.T.P. of the medical service of the R.C.A.F., especially in the study of nutrition, medical selection, treatment of mental and physical stress and fatigue. In specialized medical research units the Franks flying suit and other aids to high-speed flying were developed.

**Training.**—The original Plan provided for the training of three categories of aircrew—pilot, observer, and wireless operator-air gunner. Pilots, after a preliminary course at an Initial Training School, received *ab initio* instruction at Elementary Flying Training Schools which were operated, under direct R.C.A.F. supervision, by civilian flying clubs. The R.C.A.F. provided the airfields, buildings and aircraft, while the clubs supplied instructors (many of whom were graduates of the B.C.A.T.P. on leave without pay from the R.C.A.F.), mechanics and maintenance staff. The first intake of pilot trainees entered No. 1 I.T.S. on Apr. 29, 1940—zero day—and passed thence to an E.F.T.S. for an 8-week course on light aircraft. Throughout the lifetime of the Plan the basic E.F.T.S. syllabus underwent relatively little change, except for an extension of the course to 10 weeks to allow more Link instruction, the introduction of night flying, and an increase of flying time from 50 to 60 hours.

On completion of the Elementary Flying Training School stage the trainee proceeded to a Service Flying Training School for instruction on heavier single-engined or twin-engined aircraft. At first the course was 12 weeks, providing at least 100 hours flying, 10 hours Link, and 235 hours ground instruction. The urgent need for pilots late in 1940 caused a temporary reduction in the course to 10 weeks, but thereafter the course was progressively lengthened from 12 to 20 weeks, and eventually in June 1944, when there was a surplus of pilots overseas, to 28 weeks. With the extension of the course, greater emphasis was placed upon navigation, Link training, instrument flying and night flying. New subjects, such as aircraft recognition, night cross-country exercises, bombing and gunnery and beam approach training, were added to the syllabus. A total of 49,808 pilots were graduated from the B.C.A.T.P., including 25,747 R.C.A.F., 17,796 R.A.F. (of whom 2,629 were Fleet Air Arm), 4,045 R.A.A.F. and 2,220 R.N.Z.A.F.

The Air Observer Schools, like the E.F.T.S., were operated by civilian companies under R.C.A.F. supervision. The first school opened on May 27, 1940, with a 12-week course devoted largely to dead reckoning navigation and map reading. The trainees then went to a B. and G.S., the first of which commenced on Aug. 19, 1940, for a 6-week course, followed by a special 4-week course in astro-navigation at the Central Navigation School.

In March, 1942, the original category of air observer was abolished and replaced by four new types—navigator, navigator “B”, navigator “W” and air bomber. Each of the three types of navigator received the same standardized training. The navigator trainee began with a 10-week course at an I.T.S. (in contrast to the observer’s 4-week course) and then went to an A.O.S. for 18 (later 20) weeks, during which he received 98 hours flying time in addition to training on synthetic devices and the astro course formerly given at the C.N.S.

Since the navigator “B” combined bomb aiming with his navigation duties, he was given a 6 (later 8) week course at a B. and G.S. between the I.T.S. and A.O.S. stages. In February, 1944, the gunnery instruction at B. and G.S. was discontinued. Navigators “B” were chiefly used in Coastal Command and the trainees received a 6-week general reconnaissance course before going to an O.T.U.

The navigator “W” served as wireless operator as well as navigator and, in addition to the usual navigation course, received special signals training. Courses for navigator “W” began in the autumn of 1943 and, until December of that year, were filled with R.A.F. pupils. When R.C.A.F. navigators “W” were trained the pupils were selected from the best wireless operator-air gunners graduating from Wireless Schools.

Training of air bombers began in August, 1942. The trainee’s duties were varied; in addition to bombing he had to have some knowledge of navigation, gunnery, and piloting. After the usual 10-week course at I.T.S., the air bomber trainee went to B. and G.S. for a course which was initially 8, then 12, and finally 10 weeks. This was followed by a 6 (later 10) week course at an A.O.S., making a total instruction period of 30 weeks.

The output of navigators and air bombers was as follows:—

<i>Class</i>	<i>R.C.A.F.</i>	<i>R.A.F.</i>	<i>R.A.A.F.</i>	<i>R.N.Z.A.F.</i>	<i>Total</i>
Navigator.....	7,280	6,922	944	724	15,870
Navigator B <sup>1</sup> .....	5,154	3,113	699	829	9,795
Navigator W.....	421	3,847	Nil	30	4,298
Air Bomber.....	6,659	7,581	799	634	15,673
	<u>19,514</u>	<u>21,463</u>	<u>2,442</u>	<u>2,217</u>	<u>45,636</u>

<sup>1</sup> Including air observers.

The wireless operator-air gunner trainee entered directly at Wireless School where, during an 18-week course, elementary ground armament training was given. Operational requirements led to a lengthening of the course from the original 18-week term to 28 weeks by 1942. At the same time the second stage of training at a B. and G.S. was extended from 4 to 6 weeks. The number of rounds fired in air exercises was trebled, from 1,800 in 1941 to 5,400 in 1944.

In the early period the training was of necessity crude, as only obsolete types of machine-guns were available and air exercises had to be carried out on Fairey Battle aircraft which were not fitted with turrets. In 1941 a few Bristol, Boulton

Paul and Fraser-Nash turrets were obtained from Great Britain and in the following year Bolingbroke aircraft began to replace the outmoded Battles. Of the 18,496 W.O.A.G. trained by the B.C.A.T.P. over two-thirds (12,744) were R.C.A.F.; the R.A.A.F. provided 2,875, the R.N.Z.A.F. 2,122 and the R.A.F. 755. At the request of the Admiralty 704 telegraphist-air gunners, or naval-air gunners, were trained at B.C.A.T.P. schools in 1943-45 for the Fleet Air Arm.

Originally W.O.A.G. trainees who failed the wireless course were remustered as air gunners and given a 4-week gunnery course at B. and G.S. Eventually, however, the demand for air gunners in heavy bombers led to the establishment in 1942, of a special syllabus for air gunners covering a period of 12 weeks, equally divided between ground instruction and air firing. Of the 14,996 trainees graduated as air gunners, over 86 p.c. (12,917) were R.C.A.F., 9 p.c. (1,392) R.A.F., and the remainder R.A.A.F. (244) and R.N.Z.A.F. (443).

In November, 1943, training of flight engineers was introduced to meet another need in heavy-bomber expansion. The original course of 23 weeks was extended in July, 1944, by a 7-week type training syllabus, which previously had been given to trainees on arrival in the United Kingdom. The Air Ministry provided two four-engined aircraft for this purpose. All the 1,913 flight engineers, graduated from the Plan were R.C.A.F.

In addition to the courses outlined, operational training was also provided in Canada on six different types—single-engine fighter, twin-engine fighter bomber, medium bomber, heavy bomber, flying boat, and medium range transport. Courses varied from 8 to 14 weeks according to type. Between July 1, 1942, and Mar. 31, 1945, Canadian Operational Training Units and General Reconnaissance Schools graduated 22,431 aircrew, including 1,682 matched crews graduated during the last year of the Plan.

#### SUMMARY OF AIRCREW GRADUATION OF THE BRITISH COMMONWEALTH AIR TRAINING PLAN

**Accident Investigation and Prevention.**—On Mar. 1, 1942, an Accidents Investigation Branch was established at Air Force Headquarters to analyse systematically all training accidents and apply the accumulated information to the prevention of accidents. Under the Chief Inspector of Accidents there were specially qualified aeronautical engineers (Inspectors of Accidents), with investigating officers at Command Headquarters. The work of the Branch resulted in a steady decrease in the accident rate. Its research into the causes of accidents led to modifications in flying regulations and training methods and in aircraft design and equipment.

The number of accidents per 1,000 hours flown decreased steadily from 1.363 in 1940-41 to 0.523 in 1944-45, while the number of hours flown per accident rose from 733 to 1,908, an increase of over 150 p.c. The fatal accident rate per 1,000 hours flown declined from 0.089 to 0.044 during the same period, while hours flown per fatal accident were doubled, from 11,156 to 22,388.

Statistics reveal several interesting points. Landing and taxiing accidents constituted, in each year except 1940, more than one-half the total number of accidents. Accidents in flight varied from 56.9 p.c. (1940) to 24.2 p.c. (1943). Trained pilots were involved in more than one-half of the flying accidents.

O.T.U. showed the highest ratio of accidents per 1,000 hours flown, with S.F.T.S. second, and E.F.T.S. the lowest. This was true of fatal as well as of all types of accident.

**Concluding Note.**—One unpremeditated result of the Plan was the promotion of better understanding between the peoples of Canada and the other Commonwealth partners and United Nations whose personnel trained in Canada. Indicative of this understanding is the fact that over 3,750 Canadian girls married men of the R.A.F., R.A.A.F., R.N.Z.A.F. or other air forces stationed in the Dominion.

During the European phase of the War of 1939-45, four members of the R.C.A.F. won the George Cross for heroism and gallantry of the highest order. Two were trainees under instruction at B.C.A.T.P. schools in Canada. LAC Karl M. Gravell, a student W.O.A.G., despite burns and injuries to which he subsequently succumbed, courageously endeavoured to rescue his pilot instructor from the blazing wreckage of their crashed aircraft. LAC Kenneth G. Spooner, a student navigator, sacrificed his own life in order that other members of the crew might leave the aircraft by parachute as it fell out of control. It was the spirit of self-sacrifice and devotion to duty, so fully exemplified by these men, that brought the British Commonwealth Air Training Plan to a success far surpassing the dreams of its original planners and enabled it to play so vital a part in the defeat of Germany and Italy.

## Section 4.—The Director General of Defence Research

More than any other factor, the War of 1939-45 demonstrated the decisive importance of the technical initiative. The evolution of new weapons and counter weapons was so rapid as constantly to affect strategy. This new factor of total war demanded a full mobilization of the scientific and industrial resources of the nation and resulted in Canada making a substantial contribution to the Allied cause in research, development and production of weapons as well as in manpower and ordinary economic factors. It became apparent that research and development of new weapons should be one of the fundamental principles of future defence policy to ensure optimum economy and co-operative effort between the research activities of industry and of the Armed Services.

To provide for this principle, the Government appointed, in December, 1945, a Director General of Defence Research whose primary function is to co-ordinate the research and development activities of the Navy, Army and Air Force and to provide a link between the Armed Services and the whole scientific community in Canada. A secondary but important object is to apply for the peaceful economic and industrial benefit of Canada the many technical achievements of wartime and future developments in defence science.

The position of the Director General of Defence Research is that of Executive Head of a sub-Department of National Defence corresponding in function and responsibility to the several Chiefs of Staff of the three Services. He is a member of the Defence Council and of the Chiefs of Staff Committee. Under his direction is being created an organization which will provide for the application of new scientific and engineering knowledge to defence planning, organization, training and armament.

The organization of the Director General of Defence Research constitutes a new scientific Service of Defence closely integrated with the sea, land and air forces at the point of policy and executive control.

**Canadian Criminal Law and Procedure.**—A review of the development of the Criminal Code in Canada is given at pp. 1085-1087 of the 1934-35 edition of the Year Book; it includes a résumé of procedure and an account of the jurisdiction of the various classes of judges and magistrates.

The statistics presented in this Chapter are summarized from the "Annual Report of Statistics of Criminal and Other Offences", and are collected directly from the criminal courts in the different judicial districts throughout the Dominion. There are 156 judicial districts, including 2 sub-districts, divided by provinces as follows: Prince Edward Island 3, Nova Scotia 18, New Brunswick 15, Quebec 25, Ontario 47, Manitoba 6, Saskatchewan 21, Alberta 12, British Columbia 8 and Yukon 1.

### Section 1.—General Analyses

Crime is divided into two definite classes, criminal or 'indictable' offences, which include all serious crime covered by the Criminal Code (see pp. 1107-1112), and summary or 'non-indictable' offences, which comprise breaches of municipal by-laws, traffic laws and other less serious crimes (see pp. 1112-1116). Generally, indictable offences are triable by jury, although in certain cases the accused is accorded the right of election as to whether he be tried by jury or before a judge without the intervention of a jury, but in other cases the jurisdiction of the magistrate as to trial is absolute and does not depend upon the consent of the accused. Non-indictable offences are usually dealt with summarily by police magistrates under the Summary Convictions Act. The term "indictable" applies to offences of adults, similar offences committed by juveniles† being termed "major" offences; what are termed non-indictable offences when committed by adults are referred to as "minor" offences when committed by juveniles.

During 1944, there were 479,351 cases of adult offenders handled by the courts as compared with 512,735 cases in 1943. Of this total 48,624 cases were of an indictable nature while 430,727 cases were non-indictable. The corresponding figures for 1943 were 47,420 indictable and 465,315 non-indictable cases. In the case of juvenile offenders (under 16 years of age) 11,554 young persons were brought before the courts, of whom 1,637 were dismissed or had their cases adjourned *sine die*.

\* Revised by H. M. Boyd, Chief, Judicial Statistics Branch, Dominion Bureau of Statistics. The sixty-ninth "Annual Report of Statistics of Criminal and Other Offences", for the year ended Sept. 30, 1944, is obtainable from the Dominion Bureau of Statistics, Price 50 cents.

† The term "juvenile" is restricted to persons under 16 years of age.

**Convictions for All Offences.**—Total convictions in 1944 numbered 483,155, a decrease of 6·6 p.c. as compared with 1943. Of the total convictions, 9,917 were cases in which juveniles were found guilty of major or minor offences, a decrease of 379 or 3·7 p.c. as compared with 1943. Ontario led the provinces in convictions per 100,000 population during 1944, the ratio being 5,599; Quebec was second and Manitoba third.

*Adults.*—Ontario led among the organized provinces in the rate of convictions for indictable offences, Alberta was second, British Columbia third, with Manitoba fourth. Ontario's rate of 5,043 convictions for non-indictable offences per 100,000 population was the highest with Quebec second and Manitoba third.

*Juveniles.*—The ratios for juvenile crime are, of course, relatively small, but they are very important from a sociological standpoint. Prince Edward Island led in major offences per 100,000 population in 1944, and Ontario in minor offences.

### 1.—Convictions per 100,000 Population, by Provinces, 1944

Province or Territory	Adult Convictions			Juvenile Convictions			Grand Total
	Indictable	Non-indictable	Total Adult	Major	Minor	Total Juvenile	
Prince Edward Island.....	288	1,414	1,702	90	30	120	1,822
Nova Scotia.....	291	1,431	1,722	59	19	78	1,800
New Brunswick.....	284	2,063	2,347	79	24	103	2,450
Quebec.....	297	4,188	4,485	35	30	65	4,550
Ontario.....	444	5,043	5,487	73	39	112	5,599
Manitoba.....	330	3,088	3,418	47	10	57	3,475
Saskatchewan.....	245	921	1,166	42	8	50	1,216
Alberta.....	387	1,461	1,848	53	16	69	1,917
British Columbia.....	367	2,346	2,713	51	31	82	2,795
Yukon and N.W.T.....	482	2,412	2,894	Nil	Nil	—	2,894
<b>Canada.....</b>	<b>355</b>	<b>3,597</b>	<b>3,952</b>	<b>55</b>	<b>28</b>	<b>83</b>	<b>4,035</b>

*War-time Trends.*—During the five-year period from Sept. 30, 1939, to Sept. 30, 1944, convictions for all crime in Canada decreased from 484,328 to 483,155 or 0·2 p.c. During a similar period of time preceding the War (1934-39) convictions increased 31·5 p.c., from 368,234 to 484,328. Thus the high rate of increase during the five years preceding the War has been changed to a small decrease during the five war years. While decreased rates of convictions during the war years have occurred in adult crime, increased rates are shown for juvenile crime. It is significant that at no time since statistics of juvenile crime have been compiled separately (1922) has any period shown such a marked acceleration as during the five war years, although an improvement shown in 1943 has been continued in 1944.

The most significant figures in Table 2 are those of indictable offences per 100,000 population. Indictable offences, which had decreased steadily from 1939 to 1942, showed an increase in 1943 and a further small increase in 1944.

## 2.—Convictions for All Offences (Juveniles Included), Classified by Indictable and Non-Indictable Offences, Years Ended Sept. 30, 1931-44

NOTE.—Figures for the years 1886 to 1930 will be found at pp. 1050-1051 of the 1939 Year Book.

Year	Indictable Offences							Non-indictable and Minor Offences, Total and Ratios			Grand Total Convictions
	Offences Against—			Other Indictable Offences	Indictable and Major Offences, Total and Ratios						
	The Person	Property with Violence	Property without Violence					No.	No.	P.C. of All Offences

### Section 2.—Offences of Adults

The statistics in Table 5 are comparable with those shown for juvenile offenders in Table 20. The separation between adult and juvenile offenders is available only for the years beginning with 1922, but totals of adult offences for the years 1931-39 may be obtained by subtracting those of Table 20 from those of Table 2.

**Wartime Trends.**—There was a decrease of 11.6 p.c. in the convictions for indictable offences during the period Sept. 30, 1939 to Sept. 30, 1944, as compared with a 51.8 p.c. increase during the five years (1934-39) preceding the War. "Forgery and offences against currency", which had increased 208.1 p.c. during the five pre-war years, decreased 56.1 p.c. during the war years; "Offences against property without violence", which had increased 34.7 p.c. from 1934-39 showed a 25.6 p.c. decrease during the war years; "Offences against property with violence" increased 45.0 p.c. in the five pre-war years, but showed a 13.9 p.c. decrease during the War; "Offences against the person" increased 52.7 p.c. in the five years preceding

the War and only 1.3 p.c. during the War, while "various unclassified offences" which had increased 79.2 p.c. from 1934-39 showed a much slower (14.3 p.c.) increase during the five war years.

### 5.—Convictions of Adults for Indictable and Non-Indictable Offences, by Class of Offence, Years Ended Sept. 30, 1940-44

NOTE.—In this table "Offences against property without violence" includes Classes III and IV, and "Other" includes Classes V and VI of Table 9, pp. 1109-1110.

**Subsection 1.—Convictions of Adults for Indictable Offences**

The progress of a community, from a moral point of view, is often judged by the number of convictions for indictable offences, as these are less affected than non-indictable offences by extraneous circumstances and the varying methods of law enforcement in different areas and in different years. However, in the study of such statistics it is important to have comparable figures over a period of years. Table 6, along with the figures published in earlier editions of the Year Book (see headnote to table), provides the necessary background.

During the period from 1900 to 1944 the number of crimes increased from 5,768 to 42,511 or 637 p.c. The increase in the population during the same period was 126 p.c., revealing that the increase in the crime rate was five times that of the population.

*Wartime Trends.*—Convictions for indictable offences, which had increased by 51.8 p.c. from 1934 to 1939, decreased during the five war years despite increases from 1942 to 1943 and from 1943 to 1944. The 1944 total shows a decrease of 11.6 p.c. from the 1939 total.

### 6.—Convictions of Adults for Indictable Offences, by Provinces, Years Ended Sept. 30, 1931-44

NOTE.—Figures for 1900-20 are given at p. 1016 of the 1933 Year Book and for 1921-30 at p. 908 of the 1942 edition.

1944....	262	1,782	1,310	10,386	17,613	2,420	2,074	3,164	3,418	71	11	42,511

**Multiple Convictions.**—The total number of convictions for any one year must not be confused with the total number of persons convicted for the same period since an increasing number of persons tried for indictable offences have been convicted for more than one offence at the same trial. The trend of such multiple convictions is of value to students of sociology.

### 7.—Persons Convicted of More than One Crime at the Time of Trial Compared with Persons Convicted of One Crime, Years Ended Sept. 30, 1940-44

**Acquittals in Relation to Convictions.**—In 1944, Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Manitoba, Alberta, British Columbia and the Territories show increases in the number of convictions for indictable offences as compared with 1943. The percentages of acquittals to convictions vary greatly as between provinces in different years.

### 8.—Charges, Convictions, and Percentages of Acquittals of Adults Charged with Indictable Offences, by Provinces, Years Ended Sept. 30, 1942-44

Province or Territory	1942		1943		1944		Percentages of Acquittals

British Columbia.....	3,130	2,792	3,475	3,092	3,882	3,418	10.8	11.0	12.0
Yukon and N.W.T.....	35	31	43	42	99	82	11.4	2.3	17.2
<b>Canada.....</b>	<b>45,283</b>	<b>39,309</b>	<b>47,420</b>	<b>41,752</b>	<b>48,624</b>	<b>42,511</b>	<b>13.2</b>	<b>12.0</b>	<b>12.6</b>

**Classes of Indictable Offences and Analyses of Convictions.**—Convictions for 1944 were 1.82 p.c. higher than in 1943. Theft, assault, aggravated assault, burglary, robbery, receiving stolen goods, forgery and uttering, gambling and “keepers and inmates of bawdy houses”, accounted for the highest percentage of all indictable offences, but were leaders in the decline of indictable offences during the War. They were also leaders in the heavy increase of indictable crime during the five years preceding the War. Convictions for theft, which had shown a 21.4 p.c. increase in the five pre-war years, decreased 22.0 p.c. during the five war years. Theft comprises over one-fourth of all indictable crime.

**Convictions of Females.**—The number of females convicted of indictable offences decreased 33 p.c. in 1944 as compared with 1943, mainly accounted for by the fact that convictions for females in Quebec were less than half as high as they were in 1943. Decreases were also shown in Nova Scotia, Ontario, Manitoba and Saskatchewan.

**Recidivism.**—The number of offenders who relapse into crime after a first conviction decreased each year from 1939 to 1942 but increased slightly in 1943 and 1944. However, the number of recidivists and the percentage of total convictions they represent have shown a general tendency to decline in recent years. The number of first offenders, which had also declined in 1941 and 1942, showed a slight increase in 1943 and 1944.

**Subsection 2.—Convictions of Adults for Non-Indictable Offences**

The following statistics relate to non-indictable offences of adults (persons 16 years of age or over) and disposed of by police magistrates or other justices of the peace, under authority of the Summary Convictions Act. Such convictions during 1944 showed a decrease of 7.4 p.c. as compared with 1943; the numerical decrease in Quebec alone was greater than that for Canada as a whole.

#### 14.—Convictions of Adults for Non-Indictable Offences, by Provinces, Years Ended Sept. 30, 1931-44

NOTE.—Figures for 1900-12 are given at p. 1020 of the 1933 Year Book and for 1913-30 at p. 913 of the 1942 edition.

The increase in the past twenty years in non-indictable offences has been due mainly to increases in convictions for breaches of traffic regulations, which have risen from £ 3,778 in 1925 to 270,021 in 1944 or from 42 p.c. of the total in 1925 to 62.7 p.c. in 1944. The decline in the convictions from non-indictable offences from 1943 to 1944 is accounted for mainly by the 79.1 p.c. decrease in convictions for "radio without licence", only 7,194 convictions being shown for this offence in 1944 as compared with 34,434 in 1943.

**Offences Against the Liquor Acts.**—Until the War of 1914-18, alcoholic liquors were generally sold under specified conditions by licensed hotels or licensed shops. Offences against the liquor Acts usually represented a breach of the conditions of sale. During that War, prohibition was generally established but in more recent years the Provincial Governments have taken over the sale of liquor through commissions. Eight of the nine provinces now have such liquor commissions, Prince Edward Island being the only province in which prohibition prevails. In 1929, the number of convictions for offences against the liquor Acts reached the highest figure on record, viz., 19,327; convictions in 1944 numbered 17,093. Most of the increase of 13.2 p.c. over 1943 was shown in Ontario.

**17.—Convictions for Offences Against the Liquor Acts, by Provinces, Years Ended Sept. 30, 1931-44**

NOTE.—Figures for 1900-20 are given at p. 1022 of the 1933 Year Book and for 1921-30 at p. 915 of the 1942 edition.

**Breaches of Traffic Regulations.**—At the beginning of the century, when the motor car was scarcely known and to-day's speeds even for freight movement were unheard of, convictions for breaches of traffic regulations numbered only 185 for all Canada. By 1942 the total convictions had risen to 399,957 the highest number ever recorded and accounted for 69 p.c. of all non-indictable offences in that year.

A strong influence in reducing convictions under breaches of traffic regulations in 1943 and 1944 was the removal, owing to wartime restrictions, of a large number of

private and passenger vehicles from the highways. The number of convictions in 1943 (274,573) was the lowest since 1936 (237,183). The figure 270,021 for 1944 showed a further decline representing a decrease of over 33 p.c. from the peak year of 1942.

### 18.—Convictions for Breaches of Traffic Regulations by Provinces, Years Ended Sept. 30, 1931-44

NOTE.—Figures for 1900-20 are given at p. 1023 of the 1933 Year Book and for 1921-30 at p. 915 of the 1942 edition.

<sup>1</sup> Since 1937 convictions for driving a car while drunk have been classed as indictable offences. In 1938 and later years dangerous and reckless driving was so classed and since 1939 the breach of Defence of Canada Regulations and leaving the scene of an accident have also been so classed. <sup>2</sup> Includes one in the Northwest Territories. No convictions were reported for the Northwest Territories for other years.

For the year 1944, Ontario, which had 44.9 p.c. of the registrations of motor-vehicles in Canada (see p. 663), had 54 p.c. of the total convictions; Quebec in the same year had 14.9 p.c. of the motor-vehicles and 32 p.c. of the convictions, and Manitoba 6.2 p.c. of the motor-vehicles and 6 p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. Thus, the above three provinces have large urban centres, while in provinces with lower degrees of urbanization such as the Maritimes, Saskatchewan and Alberta, convictions were low in proportion to the number of motor-vehicles registered.

**Convictions of Females.** The number of females convicted of non-indictable offences in 1944 was 20,442, a decrease of 11.4 p.c. as compared with 1943. The exceptional decline in Quebec together with small decreases in Prince Edward Island, Saskatchewan, Alberta and the Territories more than offset the increases in the other provinces.

Among the more important offences listed, breaches of street and traffic regulations were the most important single offences, accounting for 8,763 convictions as compared with 7,146 in 1943; drunkenness came next with 3,006 compared with 3,030; and 1,196 convictions as compared with 1,202 in 1943 were recorded as infractions of the liquor laws. Vagrancy accounted for 1,780 convictions as compared with 1,697 in 1943.

Among the total of 20,442 convictions in 1944, no less than 482 were convictions for the relatively minor offence of operating a radio receiving set without a licence.

### Section 3.—Juvenile Delinquency

The terms indictable and non-indictable are applied only to offences of adults, similar offences committed by juveniles (persons under 16 years of age) being termed "major" offences and "minor" offences, respectively.

Table 20 shows the numbers of convictions of juveniles for all offences, classified as major and minor offences, for the judicial years 1931-44. No separation by class of offence is available for earlier years. The rates per 100,000 population in this table apply to the total population, estimates of population by age not being generally available for intercensal years.

**20.—Convictions of Juveniles, for Major and Minor Offences, by Class of Offence,  
Years Ended Sept. 30, 1931-44**

NOTE.—In this table "Property Without Violence" includes Classes III and IV, and "Other Major Offences" includes Classes V and VI of Table 9, pp. 1109-1110. For figures for 1922-30, see p. 916 of the 1942 Year Book.

While, officially, juveniles are persons under 16 years of age, in response to increased public interest in offences committed by young persons, the following table has been compiled, in which the convictions for indictable offences of persons aged 16 to under 21 have been added to the figures of juveniles found guilty of major offences. The rates per 100,000 population are the proportions of the offences committed by persons in any one age group: the population figure for 1941 is taken from the Census of 1941 while for the other years official estimates are used.

**22.—Convictions of Juveniles for Major Offences and of Adults for Indictable Offences,  
Years Ended Sept. 30, 1939-44**

Year	Juveniles (7-16)			Adults (16-21)		
	Convictions	Rate per 100,000 Population	Percentage Change from Preceding Year	Convictions	Rate per 100,000 Population	Percentage Change from Preceding Year

1944.....	6,529	335	+0.5	11,430	1,022	+13.7

*War-time Trends.*—Immediately after the beginning of the War, major offences by juveniles began to show an increase. During the year ending Sept. 30, 1940, convictions had increased 5.6 p.c. over the preceding year. Accelerated increases of 17.1 p.c. and 11.5 p.c. were shown in 1941 and 1942.

This condition caused a united effort by Welfare Societies, courts and other youth agencies to concentrate on an effort to lessen the growing epidemic of crime among juveniles. This effort succeeded in the halting of increases and for 1943 a decrease of 6.2 p.c. in the number convicted of major offences was shown with figures remaining about the same for 1944.

Meanwhile, in the age group 16-21, indictable crime showed decreases of 9.6 p.c., 9.4 and 1.3 p.c., respectively, for 1940, 1941 and 1942. This trend was the very opposite of the trend in the juvenile group (7 to 16 years).

During the years 1943 and 1944, when the efforts of the authorities seemed to have arrested the sizable juvenile increases, crime in the 16 to 21 group showed increases of 18.7 and 13.7 p.c.

**Major Offences.**—From Table 23 it will be observed that theft and receiving stolen goods; breaking, entering and theft; and other wilful damage to property account for the great bulk of the offences. In 1944, 92.9 p.c. of the major offences were in these classes.

**Wartime Trends.**—Major offences for juveniles, which had decreased 6.3 p.c. during the five years immediately preceding the War, increased by 30.1 p.c. during the war years, 1939-41. The increases were chiefly in theft, burglary, damage and common assault. Theft, which had decreased 8.9 p.c. in the five years preceding the War, increased 9.4 p.c. during the war years. Theft of automobiles and bicycles, which are not included in above classification of theft have also shown great increases during the War, though convictions for theft of automobiles were increasing just as rapidly during the five-year pre-war period. The rate of increase

for burglary, which had been 11.0 p.c. in the 1934-39 period, has been accelerated to a 43.1 p.c. rate of increase during the war years. Convictions for common assault declined 42.6 p.c. from 1934 to 1939 and showed an increase of 21.2 p.c. since 1939. Malicious damage to property which decreased 25.5 p.c. from 1934 to 1939 showed a 70.4 p.c. increase during the war years.

**Recidivism.**—The number of juvenile delinquents who have previously appeared before a court has generally increased although the fluctuations between individual years are rather wide over the period for which figures are available.

**24.—Juvenile Offenders, Convicted for Major Offences and Number of Times Convicted, Years Ended Sept. 30, 1931-44**

Year	Times Convicted					Total Offenders	Total 'Repeaters'	'P.C. of Repeaters' to Total Offenders

*War-time Trends.*—An increase of 5.8 p.c. shown in convictions of juveniles for minor offences during the five years preceding the War has been accelerated to 30.6 p.c. during the 1939-44 war period. Breaches of municipal by-laws which recorded a 33.7 p.c. increase in the five years preceding the War has shown the much more rapid increase of 78.6 during the war years. Disturbing the peace, convictions for which offence had decreased 27.1 p.c. in the 1934-39 period showed an increase of no less than 714.3 p.c. during the five war years. Truancy with an increase of 88.6 p.c. during the war years, reversed a 1.5 p.c. decline in the five pre-war years.

### Section 4.—Municipal Police Statistics

Police statistics were collected from 188 cities and towns of 4,000 or over population in 1944. The aggregate population of this group of cities and towns was 5,134,078 and the total number of policemen was 5,729 or one for every 896 of population.

A total of 492,725 offences were reported to the police. Arrests numbered 128,466 and 226,688 summonses were issued. There were 344,446 prosecutions and 304,881 convictions.

Automobiles stolen numbered 8,869 with 8,812 recovered. Bicycles stolen numbered 17,277 with 13,452 recovered. The value of other goods reported to the police as stolen was \$3,760,860. Value of stolen goods recovered totalled \$1,821,309.

Automobile accidents numbered 39,390 as the result of which 481 persons were killed and 13,158 injured. Other accidents caused 548 killed and 8,774 injuries.

The number of doors found unlocked by the police was 37,472; 30,226 persons were given shelter in police stations and 10,484 stray children were returned to their homes.

#### 26.—Police Statistics of Canadian Cities and Towns, by Provinces, 1944

Province	Cities and Towns	Population	Police	Arrests	Summonses	Population per Policeman	Arrests per Policeman
Prince Edward Island.	2	19,855	16	670	455	1,241	42

### Section 5.—Penitentiary Statistics\*

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries of Canada. Seven institutions are included in the system, the two largest of which are at Portsmouth, Ont., and St. Vincent de Paul, Que., while the other five are at Dorchester, N.B.; Prince Albert, Sask.; Stony Mountain, Man.; New Westminster, B.C.; and Collins Bay, Ont. During the fiscal year ended Mar. 31, 1945, the average daily population of these institutions was 3,062.2 and the total net cash outlay for the year was \$2,871,195 or \$2.57 per convict per diem, compared with 3,028 average daily population and \$2,689,059 total net cash outlay or \$2.43 per convict per diem for the year 1941.

Female convicts committed to penitentiaries in the different provinces are sent to the penitentiary at Kingston, Ont., where special quarters and staff are maintained for their detention and supervision. Female convicts in custody on Mar. 31, 1945, numbered 52 compared with 43 in 1944 and 46 in 1941.

**Movement of Population of Penal Institutions.**—Penal institutions may be classified under three headings: (1) penitentiaries, with slow turnover, since prisoners have long sentences; (2) reformatories and training schools, also with rather slow turnover; and (3) common gaols, where the turnover is extremely rapid. If the average population for the year be taken as the average of the figures for inmates at the beginning and at the end of the year, and the number discharged be the turnover, the percentage turnover in 1944 was: in penitentiaries, 51.6 p.c.; in reformatories and training schools, 164 p.c.; in gaols, no less than 1,728 p.c. In dealing with these figures it must be borne in mind that the common gaol population changes from day to day, and is partly made up of accused persons awaiting trial who may be either liberated or sent to a penitentiary or reformatory.

\* Revised in co-operation with the Superintendent of Penitentiaries, Department of Justice.

## 27.—Population of Penal Institutions, 1942-44

NOTE. Penitentiary statistics are for the years ended Mar. 31, for other institutions, the figures are for the years ended Sept. 30.

Year and Type of Institution	In Custody, Beginning of Year	Admitted during Year	Discharged during Year	In Custody, End of Year
<b>1942</b>				
Penitentiaries.....	3,688	1,241	1,697	3,232

<b>Totals, 1944.....</b>	<b>10,862</b>	<b>65,929</b>	<b>65,569</b>	<b>11,222</b>

Tables 28 to 30 give the more important penitentiary statistics as reported to the Bureau of Statistics. The number of convicts in penitentiaries was 1,865 in 1911, rose to 2,118 in 1916 and declined to 1,468 in 1918. After demobilization and the depression of 1921, the number of convicts rose to 2,640 in 1922, declined to 2,225 in 1924 and then increased to 4,164 in 1932. The increase was particularly rapid after 1929, amounting to 1,395 or 50.4 p.c. in three years. The number of convicts in 1936, at 3,098, was lower than in any year since 1929, but in 1937 there was an increase of 5.4 p.c. with further increases of 9.7 p.c. in 1938 and 6.2 p.c. in 1939. By 1943 a decrease of 21.9 p.c. over the 1939 figure was shown, but in 1944 there was an increase of 3.7 p.c. over the previous year. The number of paroles (ticket-of-leave) was 243 in 1944.

## 28.—Movement of Convicts in Penitentiaries, Years Ended Mar. 31, 1941-45

<b>In Custody, Ends of Years.....</b>	<b>3,688</b>	<b>3,232</b>	<b>2,969</b>	<b>3,078</b>	<b>3,129</b>

Table 29 shows the ages of convicts by groups. In 1945, of the total of 3,129, 14 p.c. were under 21 years of age and 44 p.c. between 21 and 30 years of age; thus 58 p.c. were 30 years of age or less. In 1914, there were 2,093 convicts of whom 9.3 p.c. were under 20 and 44.4 p.c. between 20 and 30, a total of 53.7 p.c. under 30. In 1923, there were 2,486 convicts and 11.3 p.c. were under 20, 46.6 p.c. between 20 and 30, or 57.9 p.c. under 30 years of age. Detailed statistics of the place of birth, conjugal state, sex and religion of convicts are presented in Table 30.

29.—Ages of Convicts in Penitentiaries, as at Mar. 31, 1938-45

Age Group	1938	1939	1940	1941	1942	1943	1944	1945

<sup>1</sup> The classification of convicts by place of birth was changed in 1939. For figures according to the previous classification for the years 1932-38, see p. 1073 of the 1939 Year Book. <sup>2</sup> Not recorded separately. <sup>3</sup> None reported. <sup>4</sup> These persons returned themselves as Methodists although union with Presbyterians and Congregationalists to form the United Church of Canada was completed in 1926.

# CHAPTER XXXI.—MISCELLANEOUS ADMINISTRATION

## CONSPECTUS

	PAGE		PAGE
SECTION 1. PUBLIC LANDS.....	1124	Subsection 1. The Indians of Canada..	1130
Subsection 1. Dominion Public Lands..	1125	Subsection 2. The Eskimos of Canada..	1133
Subsection 2. Provincial Public Lands..	1129	SECTION 4. DEPARTMENT OF THE SECRETARY OF STATE.....	1134
SECTION 2. DEPARTMENT OF PUBLIC WORKS.....	1130	SECTION 5. ROYAL CANADIAN MOUNTED POLICE.....	1137
SECTION 3. THE INDIANS AND ESKIMOS OF CANADA.....	1130	SECTION 6. THE CIVIL SERVICE OF CANADA	1139

NOTE.—Certain phases of Dominion Government activity, such as the operations of the International Joint Commission and certain scientific activities of the Department of Mines and Resources were dealt with in this Chapter of the 1930 edition of the Year Book (pp. 1014-17). These branches of the Miscellaneous Administration have not undergone wide change and, therefore, the material has not been republished since that time.

## Section 1.—Public Lands

In Table 1, summarizing the land area of Canada, items 3, 4 and 5 are obtained from Dominion Government sources and items 1, 2 and 7 from Provincial Government sources. In the majority of cases the area of provincial lands (item 6), as calculated by balancing the figures, agrees with the area as estimated by the Provincial Departments concerned. Thus, any differences reported from year to year in the area of lands alienated or in process of alienation are compensated for by the adjustment of lands still remaining under the Crown in the right of the provinces concerned.

### 1.—Classification of Lands in Canada, by Tenure (*circa*) 1945

NOTE.—The land area of Canada classified by surface resources is shown at pp. 29-30.

Tenure	P.E.I.	N.S.	N.B.	Que.	Ont.
	sq. miles	sq. miles	sq. miles	sq. miles	sq. miles
1. Alienated, patented, granted, etc.....	2,173	16,723 <sup>1</sup>	16,600	37,500	40,147 <sup>1</sup>
2. In process of alienation.....	Nil	—	300	6,000	—

<b>Totals, Land Area.....</b>	<b>219,723</b>	<b>237,975</b>	<b>248,800</b>	<b>359,279</b>	<b>1,458,784</b>	<b>3,462,103</b>

<sup>1</sup> Includes lands in process of alienation.<sup>2</sup> Less than one square mile.<sup>3</sup> Includes the

Gatineau Park (25 miles) and the Quebec Battlefields Park (0.36 miles) which are under Dominion jurisdiction but which are not technically "National Parks".

<sup>4</sup> For provinces indicated only.<sup>5</sup> Includes 752,282 square miles set aside by Order in Council as native

game preserves in which only Indians and Eskimos may hunt, as game sanctuaries in which hunting and trapping is forbidden, and as reserves for reindeer grazing, but which are not regarded as national parks.

<sup>6</sup> Includes Wood Buffalo Park (which, although reserved by the Dominion, is not administered as a national park) and the Tar Sands Reserve (2,068 acres).<sup>7</sup> Includes that portion of the Wood Buffalo Park in N.W.T.

## Subsection 1.—Dominion Public Lands\*

The public lands under the administration of the Dominion Government comprise: lands in the Northwest Territories, including the Arctic Archipelago and the islands in Hudson Strait and Bay and James Bay; lands in Yukon Territory; National Parks and historic sites (see pp. 30-35); forest experiment stations; experimental farms; Indian reserves (see pp. 1130-1131); Ordnance and Admiralty lands; and, in general, all lands held by the several Departments of the Dominion Government for various purposes connected with Dominion administration including the Tar Sands Reservation comprising four areas, amounting in all to 2,068 acres, in the Fort McMurray District of Alberta. The lands and other natural resources lying within the boundaries of the Provinces of Manitoba, Saskatchewan, Alberta and British Columbia that had formerly been administered by the Dominion Government, were transferred in 1930 to the administration of the provinces concerned.

The great bulk of the land areas under Dominion administration are those of Yukon and the Northwest Territories, amounting to about 1,458,784 square miles or 42 p.c. of the land surface of Canada. In general, the southern border of both Yukon and the Northwest Territories is 60° N. latitude. In Europe, the cities of Oslo, Stockholm and Leningrad are near this line; about three-fourths of Norway, two-thirds of Sweden, Finland and a large portion of Russia are north of it. This northern part of the national domain is under the administration of the Lands, Parks and Forests Branch of the Department of Mines and Resources. The Royal Canadian Mounted Police maintain law and order throughout Yukon and the Northwest Territories.

**The Northwest Territories.**—An account of the administration of the Northwest Territories given at pp. 946-948 of the 1941 Year Book was brought up to 1944 at pp. 1095-1098 of the 1945 edition.

\* Prepared under the direction of R. A. Gibson, I.S.O., Director, Lands, Parks and Forests Branch, Department of Mines and Resources, Ottawa.

# LAND AREA OF CANADA

## CLASSIFIED

## BY TENURE

## BY PROVINCES

# LAND AREA

## CLASSIFIED AS

## AGRICULTURAL, FORESTED OR UNPRODUCTIVE

## BY PROVINCES

The wave of prospecting and staking that followed reports of spectacular discoveries from diamond-drilling on properties of Giant-Yellowknife Gold Mines, Limited, continued during 1945. During that year, 9,481 claims were recorded and in the first three months of 1946 an additional 1,605 claims were registered. Prospecting and staking have been extended from the Yellowknife River area—in which producing mines such as Con, Rycon, and Negus are located—northward to Indin Lake about 135 miles from Yellowknife settlement, northeastward to the treeless barrens in the vicinity of MacKay and Courageous Lakes, and eastward along Hearne Channel of Great Slave Lake. Considerable activity has also been evident in the Thompson Lake, Gordon Lake, and Beaulieu River areas within 75 miles of Yellowknife. More than 200 mining companies have been incorporated for operations in the Mackenzie District—the greater number in the Yellowknife area—and about 70 have programs of exploration in various stages of development.

Gold production in the Yellowknife District was resumed in August, 1945, when the mill of Negus Mines Limited was reopened: 7,198 fine ounces of gold were milled during the year. Announcement has been made of the reopening of the Con and Rycon mines of Consolidated Mining and Smelting Company of Canada, Limited, and of Thompson-Lundmark Gold Mines, Limited, by the autumn of 1946.

Of the properties under development, those of Giant-Yellowknife Gold Mines, Limited, and Crestaurum Mines, Limited, have shown considerable progress. At the Giant property, one shaft has been sunk to a depth of 600 feet and a second shaft commenced. Two large ore bodies have also been determined, and it is expected that gold-milling operations will be commenced early in 1948. In May, 1946, the sinking of a three-compartment shaft to a depth of 500 feet had been commenced on the Crestaurum property. Roads connecting the Giant and Crestaurum properties with the settlement of Yellowknife are under construction.

An important development in the Yellowknife District will result from the decision of the Dominion Government to undertake a hydro-electric power development on Snare River, about 80 miles north of Yellowknife settlement. Completion of the first stage of the project will provide about 8,000 h.p., which is urgently required for use at the Giant and other mines. The new plant will supplement power furnished at present by a development on Yellowknife River near Prosperous Lake which is incapable of taking on additional loads.

Concurrent with increased mining activity at Yellowknife has been the expansion of the settlement. To meet the demands for additional sites required for business and residential buildings, an addition to the townsite was surveyed in 1945, and a large number of lots have been sold. Among the new buildings planned are a government administration building, staff quarters, and liquor dispensary. Plans are also under way for construction of a Red Cross hospital.

The Norman Wells oil field continued to be an important source of petroleum products for the Northwest Territories. Although crude oil production on the Canol Project account was terminated on Mar. 8, 1945, production sufficient to meet local needs was maintained, and the necessary oil products were distilled at the Norman Wells refinery. The total crude petroleum production in the Territories in 1945, all of which came from the Norman Wells field, was 353,117 bbl.

During 1945, two major oil companies had parties making reconnaissance geological surveys in areas outside those under permit. Imperial Oil, Limited, had two parties exploring the Mackenzie River region south of Fort Norman and two parties in the vicinity of Fort Good Hope. Socony Vacuum Oil Company had two geological parties on reconnaissance surveys, and these confined their work to

the region between Fort Good Hope and Aklavik. Imperial Oil, Limited, also carried out considerable geophysical prospecting on permit areas in the region between Fort Norman and Fort Good Hope, where exclusive rights to explore had been granted.

In addition to the geological and geophysical work carried on, Imperial Oil, Limited, completed seven productive oil wells for the Canol Project during 1945. They also drilled 10 wildcat wells on their own account in the areas which they hold under permit. These wildcat wells were drilled in an attempt to find new fields but, although carried to a depth of more than 5,000 feet, no oil was discovered. The proven field comprises an estimated area of 4,010 acres, of which 1,870 acres lie beneath Mackenzie River. The latest estimate of the recoverable oil reserve from the field is 36,250,000 bbl.

Late in 1945, the Frobisher Exploration Company, Limited, obtained a permit to explore in the Hay River region at the west end of Great Slave Lake. In April, 1946, the Company commenced diamond-drilling a series of test holes with the object of defining the rock structure and ascertaining whether the region is favourable for locating oil wells.

The production of concentrated pitchblende ore—from which radium is obtained—was continued at the mine and mill of Eldorado Mining and Refining at Great Bear Lake. Transportation of concentrates by water from the mine to railhead at Waterways, Alta., for shipment to the Company's refinery at Port Hope, Ont., is being facilitated by the extension of the existing road around rapids on Great Bear River. Completion of this road is expected in 1946. The revelation of the part that uranium—one of the principal products obtained from the concentrates—plays in atomic research, made it imperative that the highly valuable deposits at Great Bear Lake be placed under Government control. Consequently, the mine, mill and other assets of the Company were acquired by the Dominion Government in January, 1944, and have since been operated by a Crown Company. For security reasons, production figures are treated as confidential.

Steps to improve facilities for transportation to the Territories were undertaken in 1945. An agreement was reached between the Dominion Government and the Province of Alberta providing for the construction of an all-weather road linking Grimshaw, Alta., terminus of a line of the Northern Alberta Railways, with Hay River Settlement on Great Slave Lake. The Dominion Government will share with the Province the cost of construction of 247 miles lying within the Province, and will bear the whole cost of the building of 80 miles of road north of the provincial boundary. This route will supplement the Athabaska Slave-Mackenzie River water route northward from Waterways, Alta., and its completion is expected to facilitate delivery of freight to Yellowknife and other points in the Territories.

Surveys were also undertaken by the Dominion Government with a view to improving navigation conditions along the Mackenzie waterway. Special equipment was built to carry on dredging at the mouth of Athabaska River and elsewhere.

Aerial transportation in the Territories has been facilitated by the construction of improved landing fields equipped with weather stations at a number of the larger settlements in the Mackenzie District. These fields were constructed by United States Army engineers, with expenditures reimbursed by Canada. Development of a modern aerodrome has been undertaken by the Department of Transport at Yellowknife and one permanent strip was completed in 1945. Additional work will be undertaken in 1946 to complete the project, which permits the year-round use of modern wheel-equipped aircraft.

The fur trade continued to be an important factor in the economy of the Territories, as it provides most of the native population with a means of livelihood. In the year ended June 30, 1944, the total fur catch in the Territories was 297,633 pelts having a value of \$2,199,132. During 1945, steps were taken to establish a modern forest and wild life protection service in Mackenzie District, with headquarters at Fort Smith. Added forest protection should have a beneficial effect on the supply of game and fur animals.

**Yukon Territory.**—An account of the administration of Yukon Territory is given at p. 948 of the 1941 Year Book. The following paragraphs bring that review up to date.

The initiation of joint defence projects in northwestern Canada in 1942 was followed by a period of great activity in Yukon Territory, which continued well into 1945 when United States Forces and construction personnel were largely withdrawn after the cessation of hostilities. Of the war projects undertaken in Yukon Territory, the construction of the Alaska Highway and the Canol pipeline were the most notable. The highway, constructed in 1942-43 from Dawson Creek, B.C., to Fairbanks, Alaska, a distance of 1,523 miles, crosses the southern part of Yukon Territory, and is supplemented by access roads serving airports situated along the Northwest Staging Route. A cut-off road linking Haines, Alaska, with a point on the Alaska Highway about 80 miles west of Whitehorse, was also built. Maintenance of the Alaska Highway was continued by United States authorities until Apr. 1, 1946, when its administration passed to the Canadian Department of National Defence (Army). Travel on the highway is restricted, and is controlled by a Traffic Control Board with headquarters at Edmonton, Alta.

Developments associated with the Canol Project entailed the construction of a pipeline and access road from Norman Wells, N.W.T., across Mackenzie Mountains to Whitehorse, Y.T., and erection of an oil refinery at Whitehorse. The pipeline was put into operation in April, 1944, and the pumping of oil and operation of the refinery was more or less continuous until about Apr. 1, 1945, although drilling and production of oil on Canol account had been ordered terminated by the United States Government on Mar. 8, 1945.

Mining continued to be the principal industry of the Territory, and an increase in gold production, as well as in mining activity, occurred during 1945. Total production for 1945 was 31,721 fine ounces, as compared with a total of 23,818 fine ounces in 1944. The total value of mineral production in Yukon to the end of 1945 has been estimated at \$241,019,000 of which amount gold accounted for \$209,750,000, and silver \$20,995,000.

The greater part of the 1945 production came from the Dawson District, where dredges were operated in the Klondike area and from Clear Creek. Operations were also carried out at several other locations including Shorty, Iron, Bates, and Burwash Creeks in Whitehorse District. An interesting development in 1945 was the acquisition by eastern Canadian interests of properties formerly owned by Treadwell-Yukon Corporation, Limited, in the vicinity of Keno Hill and Galena Hill in the Mayo District.

The fur trade continued to be a source of revenue for inhabitants of Yukon Territory, and in the year ended June 30, 1944, a total catch of 78,005 pelts, valued at \$467,188, was taken.

### Subsection 2.—Provincial Public Lands

In the Maritime Provinces and in Quebec, Ontario and British Columbia (except the Railway Belt and the Peace River Block) the public lands have been

administered by the Provincial Governments since Confederation. Since the transfer by the Dominion Government of the natural resources of the Prairie Provinces and of sections of British Columbia (see also p. 1019 of the 1931 Year Book), public lands in all provinces have been under provincial administration. In Prince Edward Island, all of the land is alienated and there are no provincial public lands.

Information regarding provincial public lands may be obtained from the following officials of the respective provinces: Minister of Lands and Forests, Halifax, N.S.; Deputy Minister of Lands and Mines, Fredericton, N.B.; Deputy Minister of Lands and Forests, Quebec, Que.; Deputy Minister of Lands and Forests, Toronto, Ont.; Director of Lands, Department of Mines and Natural Resources, Winnipeg, Man.; Director of Lands, Department of Natural Resources, Regina, Sask.; Director of Lands, Department of Lands and Mines, Edmonton, Alta.; Deputy Minister of Lands, Victoria, B.C.

## Section 2.—Department of Public Works

The constructing department of the Dominion Government, since before Confederation, has been known as the Department of Public Works. The work of the Department is divided into three principal branches, viz., the Engineering Branch, the Architect's Branch and the Telegraph Branch. An account of the work of each of these branches is given at pp. 949-950 of the 1941 Year Book, and a description of the five dry docks constructed by the Department is given at p. 618 of the 1942 edition. The Department of Public Works submits details of all proposed construction works to the Department of Reconstruction and Supply (see pp. 454-455), in categories as to urgency and usefulness, and the latter Department, after listing the works to be proceeded with immediately, advises when the postponable works should be undertaken.

## Section 3.—The Indians and Eskimos of Canada

### Subsection 1.—The Indians of Canada\*

The Indians of Canada, whose affairs are administered by the Indian Affairs Branch, Department of Mines and Resources, number 125,686 (according to a departmental census taken in 1944). The popular opinion that the race is disappearing is not in accordance with fact. Before the advent of the European, the number of Indians was undoubtedly larger, but little reliable information as to the aboriginal population, during either the French or the early British regimes, is available. The best estimate, however, of the aboriginal or Indian population of what is now Canada was slightly in excess of 200,000 or about double the present figure. During this twentieth century the trend has been upward with a gradual but fairly steady increase.

**Administration.**—Reserves have been set aside for the various bands of Indians throughout the Dominion and the Indians located thereon are under the supervision of the local agents of the Department. The activities of the Department, as administrator of the affairs of the Indians, include the control of Indian education and health†, the development of agriculture and other pursuits among them, the administration of their lands, community funds, estates and the general supervision of their welfare.

\* Revised under the direction of R. A. Hoey, Acting Director, Indian Affairs Branch, Department of Mines and Resources. For an outline of the early administration, see p. 937 of the 1932 Year Book.

† Indian Health Services were transferred to the Department of National Health and Welfare as from Nov. 1, 1945.

The local administration of the Indian bands on the reserves scattered throughout the Dominion is conducted through the Department's agencies, of which there are 98 in all. The number of bands in an agency varies from one to more than 30 and the staff of an agency usually includes, in addition to the agent, various officials such as medical officer, clerk, farming instructor, field matron, constable, stockman, etc., according to the special requirements of the agency in question. The work of the agencies is supervised from headquarters at Ottawa and, in the field, by the Department's inspectors, each inspector having charge of a certain number. In British Columbia the supervision of the Indian agencies is under the direction of the Indian Commissioner for British Columbia. Expenditures for the assistance of destitute Indians on reserves are made by the Dominion Government, either from public funds or from tribal funds of the Indians.

The Government has undertaken a number of special projects for the various sections of the Indian population in accordance with their needs, including fur development enterprises in selected areas; the promotion of Indian handicraft; and planned agricultural operations.

The Indian Act provides for the enfranchisement of Indians. When an Indian is enfranchised he ceases to be an Indian under the law and acquires the full status of citizenship. In the older provinces, where the Indians have been longer in contact with civilization, many are becoming enfranchised. Great discretion, however, is exercised by the Government in dealing with this problem, as Indians who become enfranchised lose the special protection provided by the Indian Act, so that it is necessary to guard against premature enfranchisement.

**Treaties.**—In the older eastern provinces, the history of the Indians has been one of slow development with that of the community. In western Ontario, the Prairie Provinces and the Territories the situation has been different. There, the rapid spread of civilization made it necessary to take prompt and effective measures to protect the moral claims of the Indians, which are recognized by the Government. Accordingly, treaties were entered into with the Indians whereby the latter ceded to the Crown their aboriginal title and interest in the country. In consideration of such cession the Crown agreed to: set aside adequate land reserves; make cash grants; provide per capita annuities; give assistance in agriculture, stock-raising, hunting, trapping, etc., as particular circumstances might require; provide education for the Indian children; and otherwise safeguard the interests of the Indian population. These treaties were made from time to time as occasion arose and as new territories were opened up. No treaty has been made with the Indians of British Columbia, except in the Peace River Block, but their welfare has received no less attention from the Government on that account.

**Family Allowances.**—The Family Allowances Act, 1944, [Sect. 11(d)] provides "that in the case of Indians and Eskimos payment of the allowance shall be made to a person authorized by the Governor in Council to receive and apply the same". Indians receive the family allowance in the same amount as other persons. The administration of family allowances for Indians is being conducted jointly by the Indian Affairs Branch and the Department of National Health and Welfare. In certain outlying areas, where distribution of the allowances is impracticable, the allowance is given in kind.

**Government Expenditure.**—At Mar. 31, 1945, the balance of the Indian Trust Fund, which a year earlier had amounted to \$15,793,184, had increased to \$16,637,651. The amounts expended from the Consolidated Revenue Fund were

as follows: voted by Parliament for the purposes of the Department, \$5,879,077; statutory Indian annuities, \$284,563; and special fur conservation supplementary, \$68,341.

**Population.**—The Indian Affairs Branch takes a quinquennial census of the Indians under its control. The results of the latest of these censuses, taken in 1944, show a total of 125,686 Indians as compared with 118,378 in 1939 and 112,510 in 1934, an increase of 11·7 p.c. in ten years. Details are given in the Annual Report of the Department of Mines and Resources for 1944. The figures given in Table 2 are those of the eight Dominion Decennial Censuses since Confederation, and include some thousands of persons of Indian racial origin who are not on the reserves but are living as ordinary citizens of Canada.

## 2.—Indian Population of Canada at the Decennial Censuses of 1871-1941

Province or Territory	1871 <sup>1</sup>	1881 <sup>1</sup>	1891 <sup>2</sup>	1901	1911	1921	1931	1941

<b>Canada.....</b>	<b>102,358</b>	<b>108,547</b>	<b>120,638</b>	<b>127,941<sup>4</sup></b>	<b>105,492</b>	<b>110,596</b>	<b>122,920</b>	<b>118,316</b>

<sup>1</sup> Census figures in the organized provinces and estimates for the rest of Canada. <sup>2</sup> Racial origin not taken in 1891; the figures have been taken from the report of the Department of Indian Affairs of that year.

<sup>3</sup> The decrease in the Indian population of the Northwest Territories is due to the extension of the boundaries of Quebec, Ontario, and Manitoba in 1912. This also accounts for the increase in the 1921 Indian population of these provinces.

<sup>4</sup> Includes 34,481 'half-breeds'.

**Indian Education.**—For information on this subject, see Chapter XXVII, Education and Research, at pp. 1027-1028.

**Economic Data.**—Detailed statistics relating to the agricultural and stock-raising activities of the Indians, and to their real estate and personal effects, will be found in the Annual Report of the Department of Mines and Resources.

## 4.—Indian Lands, by Classes and Provinces, as at Mar. 31, 1944

<sup>1</sup> Includes income received from timber and mining dues, from annuities earned as interest on Indian trust funds, and from money received from land rentals.

<sup>2</sup> Includes Yukon.

## Subsection 2.—The Eskimos of Canada\*

The Eskimos in Canada are found principally north of the tree-line on the northern fringe of the mainland and around the coasts of the islands in the Arctic Archipelago and in Hudson Bay. Most of the Eskimos are essentially coastal dwellers, obtaining much of their food and clothing from the mammals of the sea. However, there are bands of Eskimos living in the interior of Keewatin District on the west side of Hudson Bay, who are inland people and who subsist chiefly on fish and caribou.

The Decennial Census of Canada in 1941 established the Eskimo population at 7,205, of which 5,404 were located in the Northwest Territories, 1,778 in northern Quebec, and the remainder, 23, in other provinces. Delayed returns received too late for inclusion in the Census, would raise the 1941 Eskimo population to a total of 7,639 of which 1,965 were located in northern Quebec.

The administrative care of the Eskimos devolves upon the Lands, Parks and Forests Branch of the Department of Mines and Resources, which, by regulative measures—including the setting aside of game preserves where only natives may hunt, and the establishment of reindeer herds—conserves the natural resources necessary to their subsistence. An account of the Dominion Government's reindeer experiment, which was undertaken primarily to improve the economic condition of the native Eskimos, appears on pp. 17-23 of the 1943-44 Year Book.

The medical care and hospitalization of the Eskimos is now a function of the Department of National Health and Welfare.

Contact with the Eskimos is maintained through permanent stations, at a number of which medical officers are located, in the Eastern, Central and Western Arctic; by patrols of the Royal Canadian Mounted Police; by radio communication; by means of the annual Canadian Eastern Arctic Patrol by steamship; and by auxiliary motor vessels.

\* Prepared under the direction of R. A. Gibson, I.S.O., Director, Lands, Parks and Forests Branch, Department of Mines and Resources.

## Section 4.—Department of the Secretary of State\*

The Department of the Secretary of State was constituted in its present form in 1873, through the merging of the previously existing offices of the Secretaries of State for Canada and for the provinces. The Secretary of State is the official mouthpiece of the Government, as well as the medium of communication between the Dominion and Provincial Governments, all correspondence between the Governments being conducted by him with the Lieutenant-Governors. He is also the custodian of the Great Seal of Canada and the Privy Seal as well as being the channel by which the general public may approach the Crown.

The Secretary of State is also the Registrar General, registering all proclamations, commissions, licences, warrants, writs and other instruments issued under the Great Seal and the Privy Seal. He is further charged with the administration of the Boards of Trade Act, the Companies Act, the Canada Temperance Act, the Copyright Act, the Naturalization Act, the Patent Act, the Trade Unions Act, the Ticket of Leave Act, the Unfair Competition Act (1932), the Bankruptcy Act, and with the collection and tabling of parliamentary returns. Other Acts and Regulations administered by the Secretary of State as a result of the declaration of war are: the Patents, Designs, Copyright and Trade Marks Emergency Order (1939), and the Revised Regulations Respecting Trading with the Enemy (1943). The Secretary of State deals with the organization and administration of the Office of the Custodian of Enemy Property (see the External Trade chapter of this volume, pp. 492-493). Statistics regarding patents and copyrights appear in Chapter XVII at pp. 580-582.

**Charters of Incorporation.**—Statistics of companies incorporated under the Companies Act are given in Table 6.

\* Revised by E. H. Coleman, C.M.G., K.C., LL.D., Under Secretary of State, Department of the Secretary of State.

## 6.—Numbers and Capitalizations of Companies Incorporated Under the Companies Act and Amending Acts, Fiscal Years 1936-45

NOTE.—Statistics for the years 1900-25 will be found at p. 1061 of the 1938 Year Book and for 1926-35 at p. 934 of the 1942 edition. Capitalization includes consideration of the amounts of capital received on the issue of shares without nominal or par value.

Year	New Companies		Old Companies with—				Gross Increase in Capitalization	Net Increase in Capitalization
			Increased Capitalization		Decreased Capitalization			
	No.	Capitalization	No.	Amount	No.	Amount		
		\$		\$		\$	\$	\$

**Naturalization.**—The naturalizations effected under the Naturalization Act (R.S.C. 1906, c. 77) for the calendar years 1908-17, inclusive, are given at p. 594 of the 1919 Year Book. Since Jan. 1, 1918, the only method of obtaining naturalization has been under what is known as the "Imperial" Naturalization Act, which came into force on Jan. 1, 1915. This Act was known under the title of the Naturalization Act, 1914, until July 7, 1919, when it was repealed and the Naturalization Act, 1919, came into force. On July 1, 1920, the Naturalization Act, 1919, was repealed, and the Naturalization Act, 1914, was revived and amended under the title of the Naturalization Acts, 1914 and 1920. By an amendment passed by Parliament in 1923, the restriction by which persons of alien enemy birth were ineligible to receive certificates of naturalization for a period of 10 years after the termination of the War was removed. All these Acts have been consolidated in R.S.C. 1927, c. 138. At the present time any alien, regardless of his nationality, may apply for naturalization, but, according to Sect. 4, Part II of the Act, the granting of a certificate of naturalization to the applicant is left entirely to the discretion of the Minister, who may, without assigning any reason, give or withhold the certificate as he thinks most conducive to the public good. Since Jan. 15, 1932, female British subjects, marrying aliens, retain British nationality, unless they, by marriage, acquire their husbands' nationalities, and the wives of aliens no longer become British subjects automatically through their husbands' naturalization. They must apply to the Secretary of State.

By Order in Council under the War Measures Act (R.S.C. 1927, c. 206) dated July 9, 1942 (5842) as amended by Order in Council dated Sept. 23, 1942 (P.C. 8499), effective Jan. 1, 1943, all aliens who are required to apply for naturalization by filing their applications through the courts must first file Declarations of Intention. They are not qualified to file applications for naturalization under Sect. 4 of the Naturalization Act until one year after the date of filing the Declarations of Intention.

By the terms of Para. I of the Regulations laid down in Order in Council P.C. 5842 of July 9, 1942, as amended by P.C. 4309 of June 5, 1944, the Secretary of State may grant a certificate of naturalization to any alien serving outside Canada with the Naval, Military or Air Forces of Canada and to any alien who has enlisted for general service with the Naval, Military or Air Forces of Canada and who has served on active service in any of the said forces for a period of not less than eighteen months, and who is still serving on active service in any of the said forces, provided the applicant has satisfied the Secretary of State by the filing of such documents and evidence as may be prescribed by the Secretary of State and the Minister of National Defence, that he is a fit and proper person to be naturalized in Canada as a British subject. No fee shall be payable on such certificate of naturalization.

Table 7 shows the number of naturalization certificates issued to single persons or heads of families under these Acts during the calendar years from 1942 to 1945. The total numbers of persons naturalized during the same years, including (except as stated above) the wives and minor children of those to whom naturalization certificates were issued, are shown in Table 8.

**Naturalized and Alien Population by Racial Origin.**—Persons naturalized under the Naturalization Act are entitled to all the political and other rights, powers and privileges, and are subject to all the obligations, duties and liabilities of a natural-born British subject, and from the date of naturalization have the same status as a natural-born British subject.

Table 9 gives an analysis of the non-British and non-French naturalized and alien population of Canada for the two censuses, 1931 and 1941.

## 9.—Naturalized and Alien Population by Racial Origin, 1931 and 1941

**The New Citizenship Act as it Relates to Canadian Citizens and to Aliens.**—The Canadian Citizenship Act defining Canadian citizenship was proclaimed July 1, 1946, at the 2nd Session of the 20th Parliament of Canada and comes into force on Jan. 1, 1947.

Because of the large number of members of the Armed Forces who have married overseas, the status of married women is to-day of special importance in all countries of the British Commonwealth. The legislation follows an understanding between the United Kingdom, Canada, Australia, New Zealand and South Africa by which the principle that a married woman of another nationality would lose that nationality only if she acquired her husband's is recognized.

The legislation deals broadly with the subject of naturalization and the status of aliens. Part I of the Act defines "natural-born Canadian citizens"; Part II defines "Canadian citizenship other than natural born"; and Part III is concerned with the grounds on which Canadian citizenship may be forfeited.

The status of aliens is dealt with in Part V of the Act, which sets forward the rights and disabilities of aliens in regard to the holding of property.

## Section 5.—Royal Canadian Mounted Police

The Royal Canadian Mounted Police is a Civil Force, maintained by the Dominion Government. It was organized in 1873, and was then known as the North West Mounted Police, whose duties were confined to what was then known as the Northwest Territories. By 1904, the work of the Force received signal recognition when the prefix "Royal" was bestowed upon it by King Edward VII. In 1905, when Alberta and Saskatchewan were constituted Provinces, an arrangement was made whereby the Force continued to discharge its duties as formerly, each Province making a contribution towards defraying the cost. This was continued until 1917.

In 1918, the Royal North West Mounted Police was assigned the duty of the enforcement of Dominion Legislation for the whole of Western Canada, west of Port Arthur and Fort William. Soon after the close of the War of 1914-18, an

extension of governmental activities made it obvious that the enforcement of Dominion statutes throughout Canada must be the responsibility of a Dominion Force and, therefore, the jurisdiction of the Royal North West Mounted Police was extended to the whole of Canada early in 1920. In that year, the name of the Force was changed to the Royal Canadian Mounted Police and the former Dominion Police with Headquarters at Ottawa, whose duties were largely connected with guarding public buildings in that city and the Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., were absorbed by the Royal Canadian Mounted Police.

**Control and Organization.**—The force is controlled and administered by a Minister of the Crown (at present the Minister of Justice) and, as already intimated above, it may be employed anywhere in Canada.

From a total of 300 in 1873, the Force grew to over 4,700 by 1944 and has now a strength of approximately 3,000. Its means of transport consist of 144 horses, 839 motor-vehicles, 4 aeroplanes, 302 sleigh dogs, and 16 trained police dogs (for tracking). It is re-forming its Marine Section which before the War consisted of about 30 vessels of comparatively small size. A small Aviation Section is also being established.

The Force is organized into 13 Divisions of varying strength, distributed over the entire country. Recruiting at the present time is once again in full swing, the term of engagement being for five years. The officers are commissioned by the Crown.

Recruits are trained at Regina, Sask., and Rockcliffe, Ont. Police Colleges are also maintained at these centres, where courses of training and instruction are given to keep the Force abreast of the latest developments in criminology. In 1937, a Reserve was established which now numbers over 500: units are located principally at such large centres as Montreal, Toronto, Winnipeg, Edmonton, Calgary and Halifax, where men can be congregated easily, and where instruction can be given in the evenings.

**Provincial and Municipal Services.**—Under the Royal Canadian Mounted Police Act, any province of Canada may enter into an agreement with the Dominion Government for the services of the Royal Canadian Mounted Police to enforce provincial laws and the Criminal Code in the rural districts, upon payment for such services. There are such agreements in force at the present time with six of the provinces: Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta. These agreements have been in existence for approximately 14 years in the case of five of the provinces mentioned, and for about 18 years in the case of Saskatchewan.

During more recent years, the Force has entered into agreements with certain cities, towns and municipalities within the six provinces mentioned above. They are principally in the Prairie Provinces, but the Eastern Provinces are now requesting similar agreements. There are over 50 such agreements in existence at the present time.

**Services to Other Police Forces and Other Duties.**—The Royal Canadian Mounted Police maintains two scientific laboratories and, for the identification of criminals, places at the disposal of all police forces its fingerprint, *modus operandi*, firearms, anti-counterfeiting and other facilities.

From Apr. 1, 1932, onwards, the Royal Canadian Mounted Police Force has been responsible throughout Canada for the enforcement of the laws against smuggling by land, sea and air. It also enforces the provisions of the Excise Act, is responsible for the suppression of the traffic in narcotic drugs, the enforcement of the Migratory Birds Convention Act, the Indian Act, the Ticket of Leave Act, and numerous other Dominion statutes, and assists many Departments of the Dominion Government, such as Mines and Resources, Fisheries, Agriculture, etc., in executing the provisions of their respective Acts, and, in some cases, in administrative duties. It is responsible for the protection of government buildings, and some of the more important dockyards, and is the sole police force operating in Yukon Territory and the Northwest Territories. It is the only police force in Canada which undertakes secret and security services for the Dominion Government.

The Force is continually attempting to keep abreast of the times, and recently established a Personnel Department, which attempts to see that, from psychological and other points of view, the right man is assigned to the right place. It has also recently added the services of dietitians to its establishment.

During recent years, extraordinary progress has been made in a movement intended to assist the youth of Canada in their games, their outlook upon citizenship, their responsibilities and privileges, with the view of lessening the number of those brought before the Courts under the Juvenile Delinquents Act and in several provinces the Boards of Education and other authorities are giving hearty co-operation. The Police personnel for this work are carefully selected and the Youth Movement shows great promise for the future.

**Two Voyages Through the Northwest Passage.**—During the summer of 1944, the Royal Canadian Mounted Police schooner *St. Roch* completed the voyage through the Northwest Passage, from Halifax to Vancouver, in a little over 80 days. This was the second successful voyage through the Passage. The previous one, from west to east, made in 1940-42, took more than two years to accomplish.

## Section 6.—The Civil Service of Canada

**Organization.\***—During the War of 1939-45, many new Departments and Branches of Government were formed which, being set up under the War Measures' Service Act, were not automatically governed by the provisions of the Civil Service Act. Under an Order in Council of April, 1940, appointments by the Governor in Council under the War Measures' Service Act were, in the main, subject to the approval of the Treasury Board after investigation of need and rates of pay by the Civil Service Commission, and appointments were to be made by the Civil Service Commission after such tests of qualifications as the Commission considered practicable and in the public interest. During the War, nearly all appointments were made on a temporary basis and the permanent organization of the Departments remained unchanged.

Since the close of the War, other questions have increasingly demanded the attention of the Commission. Reduction of staffs in Departments expanded by war activity is being proceeded with, thus providing opportunity for the release of married women and those wishing to return to their homes. Replacements and new appointments are being made so far as possible from among ex-service personnel.

\* Revised by R. Morgan, Acting Secretary, Civil Service Commission, Ottawa.

A unit in the Commission is fully engaged in conferring with veterans and securing their temporary appointment as vacancies become available. The staffing of new Departments such as Reconstruction and Supply and National Health and Welfare, and the rapid expansion of the Department of Veterans Affairs constitutes a task of considerable magnitude. A great many individual reclassifications made necessary through changes occurring during the war years have been carried out and general reclassification through unit surveys is being resumed. Extensive salary revisions for technical and professional classes have been made and consideration is now being given to other classes in the Service. Progress is being made in reverting to regular competitions qualifying for permanent appointment and as these are completed, the Service will tend to become more stabilized by the resumption of permanent appointments.

**Civil Service Statistics.\***—Since April, 1924, a monthly return of personnel and salaries has been made by each Department to the Dominion Bureau of Statistics, according to a plan that ensures comparability between Departments and continuity in point of time. The institution of this system was preceded by an investigation covering all years back to 1912.

From 1914 to 1920, the number of employees increased very rapidly, as a result of the extension of the functions of government and of the imposition of new taxes which necessitated additional officials as collectors. New services, such as the Department of Pensions and National Health and the Soldier Settlement Board were also created during this period. In January, 1920, 47,133 persons were employed; this number was the highest reached prior to January, 1940, when employees numbered 49,700.

Between March, 1939, and March, 1945, there was an increase of 69,802 in the total number of permanent and temporary employees. The bulk of this wartime increase was accounted for as follows: Department of National Defence, 36.5 p.c.; new wartime Departments and Boards (Munitions and Supply, National War Services, Wartime Information Board, Wartime Prices and Trade Board) 16.1 p.c.; Unemployment Insurance, 9.2 p.c. Much of the remaining increase was due to the creation of new wartime branches within permanent departments, e.g., National Selective Service in the Department of Labour.

Despite the large wartime increase in the total Civil Service employment, the number of permanent employees was less in March, 1945, than in March, 1939. The number of temporary employees, however, increased steadily during the war years. Consequently, in March, 1945, temporary employees represented 73.9 p.c. of the total as compared with 30.3 p.c. of the total in March, 1939, and 34.5 p.c. of the total in March, 1925, the first year for which these statistics were published.

The following sequence of tables is condensed from a recently published historical series covering the years 1925 to 1945. Table 10 gives the total numbers and percentages of permanent and temporary Civil Service employees in the month of March over the period. Table 11 gives comparable information regarding salaries and wages paid during each of the fiscal years of the period. Tables 12 and 13 give parallel data to those shown in Tables 10 and 11 but limited to the permanent and temporary employees employed at departmental headquarters. Tables 14 and 15 give index numbers of permanent and temporary employees

\* Revised in the Public Finance Statistics Branch, Dominion Bureau of Statistics.

and of wages paid to them for the same years of the series. Table 16 gives detailed information of employees and expenditures by Departments and Branches for the months of March 1944 and 1945.

**10.—Numbers and Percentages of Permanent and Temporary Civil Service Employees, Months of March, 1925-45**

Month of March—	Permanent		Temporary		Total

# CHAPTER XXXII.—SOURCES OF OFFICIAL STATISTICAL AND OTHER INFORMATION RELATIVE TO CANADA

## CONSPECTUS

	PAGE		PAGE
SECTION 1. THE DOMINION BUREAU OF STATISTICS.....	1149	SECTION 4. PUBLICATIONS OF PROVINCIAL GOVERNMENTS.....	1174
SECTION 2. ACTS ADMINISTERED BY DOMINION DEPARTMENTS.....	1163	SECTION 5. DOMINION AND PROVINCIAL ROYAL COMMISSIONS.....	1185
SECTION 3. PUBLICATIONS OF DOMINION DEPARTMENTS.....	1166		

The chief source of information on the current state of the country is the Dominion Bureau of Statistics, organized as the central statistical bureau for Canada, and described in Section 1. Section 2 contains a list of the Acts of Parliament administered by the several Departments of the Dominion Government, and Section 3 a bibliography of the publications of these Departments. This is followed, in Section 4, by a bibliography of the publications of Provincial Governments and, in Section 5, by a list of Royal Commissions appointed by the Dominion or the provinces as well as British Royal Commissions concerned with Canada.

**Canadian Information Service.** The Canadian Information Service was established on Sept. 28, 1945, by Order in Council, P.C. 6300, to "provide means and facilities for distributing abroad, information concerning Canada, and for co-ordinating and assisting the public information services of the Government".

The Service is under the supervision of a committee representative of members appointed by the President of the Privy Council; the Secretary of State for External Affairs; the Department of Trade and Commerce; the Canadian Broadcasting Corporation; the Government Film Commissioner; and the Information Service. The Committee reports to the Cabinet through the Honourable Brooke Claxton, the Minister responsible for the Service.

The Canadian Information Service collects information in many forms and supplies Canadian representatives abroad with up-to-date information about Canadian events, libraries of Canadian books, photographs, etc., background material on happenings in Canada, and also prepares material for direct distribution abroad by Canadian representatives through diplomatic missions or Trade Commissioner's Offices. The Service maintains offices at New York, London, Washington, Paris and Canberra. These offices, which work very closely with Canadian diplomatic representatives in the areas concerned, act as distribution points for Canadian information.

Journalists and information people from other countries are encouraged to come to Canada and, schools and universities abroad are provided with information about Canada for use in their curricula.

Canadian Information Service provides information officers to assist the Canadian delegations to international conferences. It has also assisted in setting up press arrangements for those international organizations that have held meetings in Canada during the past few years.

**National Film Board.**—The Canadian Government, through the National Film Board, produces films, filmstrips, photographs, posters, silk screens, wall-hangers, booklets and other graphic material for distribution in almost every country in the world. The Board's International Distribution Division at Ottawa, Ont., directs the flow of these materials through Film Board offices at London, England; New York, Chicago, Washington, Los Angeles, United States; Sydney, Australia; and Mexico City, Mexico; through Canadian Embassies, Legations, Trade Commissions, and Information Offices in other countries; and through professional theatrical and non-theatrical distributors within all these territories.

Aside from films and other graphic materials in English and French, the Board has also produced or secured the production of Canadian films in French for distribution in France and her colonies; in Spanish for Spain and Latin America; in Portuguese for Brazil, Portugal, Portuguese West Africa and Portuguese Guinea; in Danish for Scandinavia, Greenland and Iceland, in Dutch for the Netherlands, the Netherlands East Indies, and the Netherlands West Indies, in German for Switzerland, Austria and the British- and American-occupied zones of Germany, in Russian and Ukrainian for the U.S.S.R.; in Turkish for Turkey, and in Arabic for Egypt, Tripolitania, Cyrenaica, Lebanon, Syria and Iraq.

The National Film Board's technicians are keeping abreast of such recent developments as improved colour productions, stereoscopic films and television. Already over 100 Canadian films have been featured on Columbia Broadcasting System television programs in the United States.

There is another and almost equally important distribution and exchange of unedited footage among commercial, documentary and educational film organizations the world over. The British Ministry of Information, the United States Office of War Information, the French Ministry of Public Health, the Soviet Government Film Organization, and such companies as Universal and the "March of Time" have used Canadian footage in this manner and have returned the courtesy by putting their unedited material at the disposal of the National Film Board. This practice has proved an important contribution to practical internationalism.

Photographs on all aspects of Canadian life are distributed by the Board to Government Departments, tourist bureaus, newspapers, magazines and publishing houses within Canada and to Trade Commissioners and other representatives abroad who may request them.

**Canadian Broadcasting Corporation.**—Since radio broadcasting was made possible by progress in the field of wireless telegraphy following the War of 1914-18, this medium has become a rival means of giving information to the public along with newspapers, films and other means of communication. This is true in all countries whether, as in the United States, the systems are privately owned or whether, as in Canada and the United Kingdom, they are organized on a national basis. In the latter case, however, they can more properly be included under official sources of information, since the news and informative material given to the public is officially censored.

The Canadian Broadcasting Corporation, since its establishment in 1936, has indeed become one of the most effective channels through which official information is broadcast to the Canadian people. Because of the widely distributed population and especially of the sparsely peopled areas of the northwest and the far north, radio is relatively more important to Canada than to any other people.

Without it the country could not be so effectively linked as it is, for to-day the posts of the far north can receive their news and enjoy the entertainments that the radio provides equally with their fellow citizens living in Halifax, N.S., Montreal, Que., or Vancouver, B.C.

News broadcasts and programs occupy a considerable proportion of national and regional network time. They include news, drama, informative talks, children's programs, religious programs, public services broadcasts, sports, women's activities, etc.

An important development that the War has brought about has been the world coverage of news broadcasts from international centres that are picked up by the CBC short-wave receiving stations and rebroadcast to Canadian listeners. Thus it is that CBC is taking its rightful place among the official sources of information available to Canadians.

## Section 1.—The Dominion Bureau of Statistics

The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43).<sup>\*</sup> The Act was a consolidation of all previous statistical legislation and was based on the report of a Commission on Statistics, appointed in 1912, which recommended (1) a series of specific reforms and enlargements in Canadian statistics, and (2) a policy of statistical co-ordination for the Dominion, under central direction. In 1915, following the recommendations in this report, the office of Dominion Statistician was created but it was not until 1918 that the recommendations of the Commission were embodied in legislation.

The 1941 Year Book, at pp. 968-969, gives salient features of the Statistics Act and outlines the growth, organization and purpose of the Bureau.

**Publications.**—The Dominion Bureau of Statistics is the largest publishing department of the Dominion Government: the subjects of its reports cover all phases of the national economy. Items in the vote of the Bureau, passed by Parliament each year, provide limited funds for the printing and processing of reports and bulletins. Reports printed from type are set up by the King's Printer, but the Bureau itself operates its own offset printing presses and all processed reports and bulletins are completely printed as well as published by the Bureau of Statistics.

The present policy with regard to the distribution of publications is based on sales to the public at actual cost of paper and presswork only; compilation, editing and other overhead costs are not included. The object is to extend the service to the public as widely as possible and so spread the compilation and overhead, which are the big items in total costs. A special subscription rate of \$30 per year entitles the subscriber to receive a copy of each publication as issued, with the exception of news bulletins. Other special rates are set for series of publications in related groups; these are referred to in the respective sections of the list below. This list, for convenience to the reader, is set up alphabetically, by subject, as follows:—

- |                          |                         |                        |
|--------------------------|-------------------------|------------------------|
| 1. Administration        | 6. Labour, Unemployment | 10. Trade              |
| 2. Economic and Business | and Earnings            | 11. Transportation and |
| Conditions               | 7. Population           | Communications         |
| 3. Education             | 8. Production           | 12. General            |
| 4. Finance               | 9. Public Health and    |                        |
| 5. Justice               | Welfare Institutions    |                        |

<sup>\*</sup> Consolidated as the Statistics Act (c. 190, R.S.C., 1927).

Applications for reports should be sent to the Bureau of Statistics; they should indicate the individual publication or series of reports in which the applicant is interested and include the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada, Ottawa.

### 1. ADMINISTRATION—

Annual Report of the Dominion Statistician. (Included in the Annual Report of the Department of Trade and Commerce, *Price 25 cents.*)

### 2. ECONOMIC AND BUSINESS CONDITIONS—

*Business Statistics.*—The Monthly Review of Business Statistics—a statistical summary with charts, text, and tables covering 1,600 factors on current economic conditions in Canada, *Price \$1 per year*. Special Supplements, *Price 25 cents each*—Twelve Years of the Economic Statistics of Canada, 1919-30; Monthly Indexes of the Physical Volume of Business in Canada, 1919-32; Original Monthly Statistics of Chief Economic Importance, 1919-33; Recent Economic Tendencies in Canada, 1919-34; Economic Fluctuations in Canada During the Post-War Period, 1919-38.

*Economic Conditions.*—Economic Conditions in Canada in Elapsed Months of Current Year, *Price \$1 per year*.

### 3. EDUCATION—

*Annual Survey of Education in Canada* (1921-36), includes a bibliography of Canadian studies in education and a directory of Dominion and provincial associations in the field of education (since 1932) and an index of Canadian education periodicals (since 1934) (issues of 1921, 1923 and 1928-31 out of print), *Price 50 cents*.

*Biennial Survey of Education in Canada* (since 1936) published as three separate documents, viz.: (1) Elementary and Secondary in Canada, including a directory, bibliography and index of periodicals, *Price 50 cents*. (2) Higher Education in Canada, including enrolment, graduates and staff for the years since 1921, bibliography on higher education in Canada, *Price 35 cents*. (3) Survey of Libraries in Canada, listing the public, university and college, government, technical society and other special libraries with their addresses, size, etc., *Price 35 cents*.

*SPECIAL EDUCATIONAL BULLETINS.*—*Directory of Private Schools in Eight Provinces, 1944*—shows addresses, *Price 25 cents*. *List of Public Secondary Schools in Canada, 1942*—shows addresses, *Price 50 cents*. *Health Education and Medical Services in Canadian Schools, 1941*, *Price 25 cents*. *Teachers' Salaries and Qualifications in Eight Provinces, 1944*—"Qualifications" include certificates, experience, tenure, *Price 25 cents*. *University and College Revenues, 1921-39*—Summary statistics showing trends over the 19-year period, *Price 15 cents*. *Museums in Canada, 1938*—a first report on Canadian museums, including art galleries; includes a classified directory, *Price 25 cents*.

NOTE.—Subscription price for all Education Branch publications, \$1 per year.

### 4. FINANCE—

#### NATIONAL WEALTH—

Annual reports on: Estimates of the National Wealth of Canada, by Provinces, Industries, etc., 1933, *Price 25 cents*.

#### NATIONAL ACCOUNTS—

The National Income of Canada, 1919-38, Part I. [A general analysis consisting of: (a) sections on the dimensions of national income, productive sources, types of payment, gainfully occupied, provincial distribution, monthly computation, disposal of family income, relation to other factors, other estimates, and international comparisons; (b) description of method, scope of enquiry and method of approach.] *Price 50 cents*. Economic Status. (Consists of an outline of Canada's national income, the productive sources of national income, income payments to individuals, and personnel.) (Reprint from "A Statistical Survey of Public Health in Canada".) National Accounts—Income and Expenditure, 1933-45. (Contains revised estimates of gross national product, gross national expenditure and personal income payments, also a description of the concepts involved and a summary of sources and methods used. Estimates of income distribution by income classes in 1942 are presented in an appendix.) *Price 50 cents*.

#### 4. FINANCE—concluded

##### DOMINION PUBLIC FINANCE—

Dominion Income Tax Statistics, *Price 25 cents.*

The Public Debt of Canada, Dominion, Provincial, and Municipal, 1934, 1936, 1937, 1938, 1939 and 1940 (1935 out of print), *Price 25 cents.*

Numbers of Personnel and Salary Expenditures, by Months: 1925-31; 1932-34; 1935-36; 1937-39; 1940-41-42; 1943; 1944; 1945. *Price 25 cents.*

##### PROVINCIAL PUBLIC FINANCE—

*Financial Statistics of Provincial Governments* including special summaries and analyses—  
(a) 1921 to 1937 (1923, 1924 and 1927-31 out of print); (b) 1940-43, *Price 25 cents.*

##### MUNICIPAL FINANCE—

(1) *Statistics of Cities and Towns*—(a) Urban Municipalities Having a Population of 10,000 and Over, 1919 and 1920; (b) 1925 to 1938 (1925 and 1928 out of print), *Price 25 cents*; (c) Urban Municipalities Having Populations of 3,000 to 10,000, 1919; (d) Urban Municipalities Having Populations of 1,000 to 3,000, 1920; (e) Urban Municipalities Having Populations of 5,000 and Over, and 1,000 to 5,000, 1922.

(2) *Assessment Valuations; Analysis by Classes of Municipalities*—(a) 1919 to 1923; (b) 1924 to 1938, *Price 25 cents.*

(3) *Bonded Indebtedness by Classes of Urban and Rural Municipalities*—1924 to 1938, *Price 25 cents.*

(4) *Municipal Tax Levies and Receipts*—Historical Analysis, 1913-38, *Price 25 cents.*

(5) *Manual of Instructions*—Balance Sheets, Revenues and Expenditures and Other Accounting Statements of Municipal Corporations, *Price 50 cents.*

(6) *Municipal Accounting Terminology*, *Price 25 cents.*

##### COMMERCIAL FINANCE

(1) *Bank Debits*—Monthly and Annual Reports of Cheques Cashed against Individual Accounts at the Clearing-House Centres of Canada, Analysis of Bank Debits, *Price 50 cents per year.*

(2) *Commercial Failures*—Quarterly and Annual Reports, *Price 50 cents per year.*

#### 5. JUSTICE—

*Criminal Statistics*—Annual Report (covering convictions, sentences, prison statistics, police statistics, pardons, appeals, commutations and executions), *Price 50 cents.*

*Juvenile Statistics*—Annual Report (covering all aspects of crime committed by persons who have not reached their sixteenth birthdays).

#### 6. LABOUR, UNEMPLOYMENT AND EARNINGS—

(1) *Employment and Payrolls*—Monthly and Annual Reports on Employment and Payrolls (with Index Numbers by Provinces, Economic Areas, Cities and Industries), *Price \$1 per year.*

(2) *Man-Hours and Hourly Earnings*—Monthly reports on average hours per week worked by hourly rated wage-earners, and average hourly earnings, by industries, in the Dominion, the provinces and the larger industrial cities, *Price \$1 per year.*

(3) Reserve of Labour among Canadian Women, *Price 10 cents.*

#### 7. POPULATION—

##### 1. CENSUS

(A) *Report of the Seventh Census of Canada, 1931:—*

Vol. I. General—Administrative Report of the Seventh Census followed by a summary of the leading facts of the Censuses of Population and Agriculture, Institutions, Merchandising and Service Establishments, etc., and cross-analyses relating thereto. The Appendix gives a complete bibliography of census materials and reproduces the more salient figures for specified years, chronologically arranged, back to 1605. The volume also contains a series of life tables for the Dominion and each province. *Price, Cloth \$1.50, Paper \$1.*

Vol. II. Population by Local Subdivisions—Conjugal condition, racial origin, religion, birthplace, year of immigration, language, literacy, school attendance, etc. *Price, Cloth \$1.50, Paper \$1.*

## 7. POPULATION—continued

## I. CENSUS—continued

(A) *Report of the Seventh Census of Canada, 1931*—concluded

Vol. III. Ages of the People—Classified by sex, conjugal condition, racial origin, religion, birthplace, language, literacy, year of immigration, naturalization, etc. *Price, Cloth \$1, Paper 75 cents.*

Vol. IV. Birthplace, Racial Origin, and Year of Immigration of the People—Classified and cross-classified by conjugal condition, naturalization and citizenship, religion, language, literacy, school attendance. *Price, Cloth \$1, Paper 75 cents.*

Vol. V. Earnings of Wage-Earners, Dwellings, Households, Families, Blind and Deaf-Mutes—Cross-classified by birthplace, conjugal condition, year of immigration, naturalization and citizenship, racial origin, religion, language, literacy, school attendance. *Price, Cloth \$1, Paper 75 cents.*

Vol. VI. Unemployment—Classified by industry, occupation, cause, age, sex, conjugal condition, period of idleness, birthplace, racial origin, year of immigration. *Price, Cloth \$1, Paper 75 cents.*

Vol. VII. Occupations and Industries—Cross-classified by birthplace, race, age, sex, etc. *Price, Cloth \$1, Paper 75 cents.*

Vol. VIII. Agriculture—Agricultural population, farm holdings and land area, tenure, value of farm property and farm products, acreage and yields of crops, live stock, mortgage indebtedness and farm expenses, farm machinery, facilities and roads, co-operative marketing, etc. *Price, Cloth \$1, Paper 75 cents.*

Vol. IX. Institutions—Hospitals for the Sick—Type, bed capacity, facilities, movement of patient population, personnel, capital investment, maintenance, receipts and expenditures, etc. Mental Hospitals—Movement of patient population; their psychoses, age, nativity, racial origin, economic condition, conjugal condition, environment, literacy, religion, administration and personnel, etc. Charitable and Benevolent Institutions—Type, movement and population, finance, inmates, age, sex, administration and personnel, etc. Penitentiaries and Corrective and Reformatory Institutions—Inmates, offences, sentences, age, birthplace, citizenship, racial origin, previous employment, environment, educational status, conjugal condition, social habits, overseas service, administrative staff, receipts and expenditures. *Price, Cloth \$1, Paper 75 cents.*

Vol. X. Merchandising and Service Establishments—Retail merchandise trade showing number of stores, employment and wages, operating expenses, sales and stocks, by provinces, with tables in lesser detail for incorporated places of 1,000 population or over. *Price, Cloth \$1, Paper 75 cents.*

Vol. XI. Merchandising and Service Establishments—Similar information to that given in Vol. X for retail service and for wholesale establishments. Special sections dealing with chain stores, hotels and the distribution of manufacturers' sales. *Price, Cloth \$1, Paper 75 cents.*

Census Monographs—Consisting of a series of studies of outstanding Canadian problems as follows:—

Vol. XII. (1) The Canadian Family; (2) Fertility of the Population of Canada; (3) Housing in Canada; (4) Illiteracy and School Attendance in Canada; (5) The Age Distribution of the Canadian People; (6) Canadian Life Tables. *Price, Cloth \$1, Paper 75 cents.*

Vol. XIII. (7) Unemployment; (8) Dependency of Youth; (9) Rural and Urban Composition of the Canadian People; (10) Racial Origins and Nativity of the Canadian People. *Price, Cloth \$1, Paper 75 cents.*

(B) *Report of the Quinquennial Census of the Prairie Provinces, 1936:—*

Vol. I. Population and Agriculture. *Price \$1.*

Pt. I. POPULATION—Age, conjugal condition, birthplace, racial origin, immigrant population, citizenship, naturalization, language and mother tongue, years at school, literacy, school attendance.

## 7. POPULATION—continued

## I. CENSUS—continued

(B) *Report of the Quinquennial Census of the Prairie Provinces, 1930—concluded*

PT. II. AGRICULTURE—Farm population, farm workers and weeks of hired labour, area and condition of occupied farm land, farm values and value of farm products, farm revenues, farm expenses, mortgages, liens and rates of interest, size of farm, tenure, field crops, crop failure, live stock, stock sold alive, stock slaughtered and animal products, type of farm, farm machinery, co-operative buying and selling, non-resident farms, vacant or abandoned farms, age of farm operator, years a farmer and years on present farm, birthplace of farm operator, racial origin of farm operator, immigrant farm operators and period of residence in Canada, apiaries.

VOL. II. Gainfully Occupied, Wage-Earners, Unemployment on June 1, 1936, Earnings and Employment during the Census year ended June 1, 1936, Buildings, Dwellings, Households and Families—Occupation, age, conjugal condition, birthplace, period of arrival of immigrants, racial origin, status, years at school, industry, retired males, cause of unemployment on June 1, 1936, duration of unemployment, relief, potential wage-earners (14-24 years), buildings, dwellings, all households, normal households, wage-earner households, tenure and sub-tenure, value of home, monthly rent, rooms occupied, kind of dwelling, size of household, families in household, lodgers, earnings of heads of households, all families, normal families, wage-earner families, female heads of families, earnings of heads of families. Price \$1.

[NOTE.—Vols. I and II are published for each province, Price 50 cents each.]

(C) *Report of the Eighth Census of Canada, 1941:—*

VOL. II. Population by Local Subdivisions—Sex, age, conjugal condition, racial origin, religion, birthplace, immigration, citizenship, language spoken, mother tongue, school attendance, years of schooling, age of women at first marriage, movement of population, etc. Price, Cloth \$2, Paper \$1.

VOL. VIII. Census of Agriculture—Separate reports for the following provinces are available: Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Alberta and British Columbia. These reports cover final figures from the 1941 Census on Farm Population and Workers; Farm Values and Indebtedness; Area and Condition of Occupied Farm Lands; Area, Production and Value of Crops; Livestock Numbers, Value and Disposition; Production and Value of Animal Products; Number of Occupied Farms by Size, by Tenure and by Type; Farm Facilities and Expenditures; Age, Birthplace, Racial Origin, Farm Experience and Residence in Canada of the Farm Operators. Individual reports for each province. Price 25 cents.

VOL. X. Census of Merchandising and Service Establishments—The number of stores and value of sales for stores classified according to kind of business for Canada, each province, each county or census division and each incorporated locality of 1,000 population or over. Tables for Canada and the provinces showing employment and wage facts, cash, credit and instalment sales, operating expenses and other features of the retail marketing structure. Price, Cloth \$2, Paper \$1.

(Certain mimeographed reports emphasizing details and giving summary results of the 1941 Census of Merchandising and Service Establishments are published by the Merchandising and Service Establishment Branch and are listed under "Internal Trade".)

(D) *Bulletins (rotaprinted) of the Eighth Census of Canada, 1941:—*

- (1) POPULATION—Final Bulletins—(Price 10 cents each) (in the case of Bulletins A-1 to A-9 there are 10 bulletins under each heading, one for Canada and one for each province):—  
 (A-1) Population of the Counties and Census Divisions of Canada and the Provinces, by Sex, classified as Rural and Urban; (A-2) Population Classified by Conjugal Condition and Sex for Canada and the Provinces, Rural and Urban, and for Urban Centres of 5,000 and Over; (A-3) Age; (A-4) Racial Origin; (A-5) Religion; (A-6) Birthplace; (A-7) Immigration and Citizenship; (A-8) School Attendance and Years of Schooling; (A-9) Language and Mother Tongue; (A-10) Population of Canada by Provinces, Federal Electoral Districts and Subdistricts; (A-11) Population of all Cities, Towns and Incorporated Villages in each Province of Canada; (A-12) Population of the "Greater Cities", i.e., those cities which have well-defined satellite communities in close economic relation to them—Montreal, Toronto, Vancouver, Winnipeg, Ottawa, Quebec, Hamilton and Windsor; (A-13) Population of the "Greater Cities" classified by Sex, Age, Racial Origin, Religion, Birthplace, Immigration and Citizenship, School Attendance and Years of Schooling and Language and Mother Tongue; (A-14) Movement of Population—Giving Population by Years of Residence in Province of Residence at the Date

## 7. POPULATION—continued

## I. CENSUS—continued

(D) *Bulletins (rotaprinted) of the Eighth Census of Canada, 1941—continued*

of the Census and by the Province or Country of Last Residence; (A-15) Population of Municipal Wards of Cities of 100,000 Population and Over by Sex, Age, Racial Origin, Religion, Birthplace, Immigration and Citizenship, School Attendance and Years of Schooling and Language and Mother Tongue; (A-16) Population by Sex, Conjugal Condition, Age, Racial Origin, Religion, Birthplace, Immigration and Citizenship, School Attendance and Years of Schooling and Language and Mother Tongue for Social Areas of Vancouver and Winnipeg; Blind and Blind Deaf-Mutes in Canada; Deaf-Mutes.

(2) B SERIES—Racial Origin by Conjugal Condition, Age, Religion, Birthplace, Period of Immigration and Naturalization and Citizenship, Official Language and Mother Tongue, School Attendance and Years of Schooling. A bulletin has been issued separately for Canada and each province.

(3) C SERIES—Population classified by Age, Conjugal Condition, Racial Origin, Religious Denomination, Birthplace, Immigration and Citizenship, Official Language and Mother Tongue, and Schooling. A bulletin has been issued separately for Canada and each province.

(4) (F-1) Trends in Canadian Family Size, Canada, 1941; (F-2) Cultural differences in Family Size; (F-3) Occupational differences in Fertility; (F-4) The Future Population of Canada.

(5) (I-1) Canadians and Other Nationals.

(6) (M-1) Interprovincial Migration in Canada, 1931-41.

(7) OCCUPATIONS, EMPLOYMENT AND EARNINGS, HOUSEHOLDS AND FAMILIES—*Preliminary Bulletins (Price 10 cents each)—*

(A) *(The bulletins are based on a 10 p.c. sample tabulation of the family-occupation card.)*

(1) Earnings of Wage-Earners and Wage-Earner Heads of Families, for Canada and Regions, Rural and Urban; (2) Gainfully Occupied by Occupation Groups, Industry Groups and Status, for Canada and Regions, Rural and Urban; (3) Wage-Earners by Cause of Unemployment, Weeks Employed, and Amounts of Earnings and Wage-Earner Families by Amounts of Earnings, for Canada and Regions, Rural and Urban; (4) Households by Type of Tenure, Value or Rent of Dwelling, and Number of Rooms, Persons and Lodgers per Household, for Canada and Regions, Rural and Urban; (5) Families by Size and Composition, for Canada and Regions, Rural and Urban; (6) Earnings by Occupation of Male Wage-Earners, for Canada and Regions.

(B) (U-1) Wage-Earners Not at Work, June 2, 1941, for Canada and the Provinces, Rural and Urban and for Individual Urban Centres of 1,000 Population and Over; (HF-1) Buildings, Dwellings, Households and Families for Counties or Census Divisions, Rural and Urban, for Urban Areas by Size, and for Individual Urban Centres of 5,000 Population and Over; (HF-2) Value of Home and Monthly Rent paid for the "Greater Cities" of Halifax, Hamilton, London, Montreal, Ottawa, Quebec, Saint John, Toronto, Vancouver, Victoria and Winnipeg; (HF-3) The number of buildings used for Habitation, Dwellings, Households and Families; (O-1) Gainfully Occupied by Occupation and Industry Groups for Canada and the Provinces, Counties or Census Divisions, Urban Centres of 5,000 Population and Over, and the "Greater" City Areas of Montreal, Toronto, Vancouver and Winnipeg; (O-2) Occupations of the Gainfully Occupied Population on June 2, 1941, for Urban Centres of 10,000 and Over and Gainfully Occupied by Occupation Groups and Age for Cities of 30,000 Population and Over; (O-3) Series—Occupations of the Gainfully Occupied Population on June 2, 1941, by Sex, Age, Conjugal Condition, Industrial Status, Schooling, Birthplace, Period of Immigration and Racial Origin—a bulletin has been issued separately for Canada and each province; (O-4) Series—Gainfully Occupied by Industry, Sex, Age, etc.—a separate bulletin has been issued for Canada and each province; (O-5) Gainfully Occupied by Industry and Sex for Urban Centres of 10,000 and Over; (O-6) Occupational Trends, 1901-1941; (O-7) Distribution of Occupations by Industry; (E-1) Earnings and Employment among Wage-Earners During the 12 Months' Period Prior to the Date of the Census, June 2, 1941, for Canada and the Provinces, Rural and Urban,

## 7. POPULATION—continued

## I. CENSUS—continued

(D) *Bulletins (rotaprinted) of the Eighth Census of Canada, 1941—continued*

- Counties or Census Divisions, Urban Centres of 5,000 Population and Over, and for the "Greater Cities" (having 100,000 Population and Over in the City Proper); (E-2) Earnings of Wage-Earners by Occupation classifying Male and Female Wage-Earners by Occupation to show Average Earnings and Average Weeks Employed and also Number of Male and Female Wage-Earners earning Specified Amounts; (E-3) Earnings of Wage-earners by Industry Group and Occupation.
- (8) HOUSING—A series of bulletins on housing conditions in Canadian cities of 30,000 population or over, *Price 10 cents each*. (1) Regina. (2) Ottawa. (3) Victoria. (4) Halifax. (5) Windsor. (6) Hamilton. (7) Saskatoon. (8) Calgary. (9) Edmonton. (10) Vancouver. (11) Saint John. (12) Toronto. (13) Three Rivers. (14) London. (15) Winnipeg. (16) Fort William. (17) Kitchener. (18) Brantford. (19) Sudbury. (20) Verdun. (21) Sherbrooke. (22) Montreal. (23) Hull. (24) Quebec. (25) St. Catharines. (26) Kingston. (27) Outremont. (28) Summary Bulletin on Dwellings and Households in Cities of 30,000 Population and Over. (29) Crowding in Canadian Cities of 30,000 Population and Over. (30) Average Earnings per Person, and Rooms per Person Among Wage-Earner Private Families. (31) Canadian Farm Homes and Households. (32) Refrigeration Facilities in Canada. (33) Canadian Homes in Need of External Repair. (34) Automobiles, Radios, Telephones and Vacuum Cleaners. (35) Bathing Facilities in Canadian Dwellings. (MB-1) The Farm Dwellings of Canada. (36) Heating Systems and Heating Fuels in Canadian Cities. (37) Lighting Facilities in Canadian Homes. (D-1) Saskatchewan Housing Data—Electoral District Summary. (D-2) Manitoba Housing Data—Electoral District Summary. (D-3) Ontario Housing Data—Electoral District Summary. (D-4) Quebec Housing Data—Electoral District Summary. (D-5) Maritime Provinces Housing Data—Electoral District Summary. (D-6) Alberta Housing Data—Electoral District Summary. (D-7) British Columbia Housing Data—Census Division Summary.
- (9) AGRICULTURE—*Preliminary Bulletins (Price 10 cents each)—*
- (a) Number of Farms.—A series of preliminary bulletins on Number of Occupied Farms and of Fruit and Vegetable Farms, *Price 10 cents each*. (3) Manitoba, by Census Division and Municipality. (4) Saskatchewan, by Census Division and Municipality. (5) New Brunswick, by County and Parish. (6) Prince Edward Island, by County and Township. (8) Alberta, by Census Division and Municipality. (9) Ontario, by County and Township. (12) British Columbia, by Census Subdivision. (14) Quebec, by County. (18) Nova Scotia, by County and Subdivision. (22) Canada, by Province. (38) Quebec, by County and Local Subdivision.
- (b) Farm Areas and Values.—(54) Canada: Farm Values and Farm Areas, 1941 and Rent Paid, 1940. (75) Canada: Area and Condition of Occupied Farm Land, 1941.
- (c) Abandoned or Idle Farms.—(76) Canada: Abandoned or Idle Farms, 1941.
- (d) Farm Population and Workers.—(31) Canada: Number of Farm Workers. (45) Canada: Farm Population 1941, Weeks of Hired Labour and Wages Paid 1940.
- (e) Age of Farm Operators.—(72) Canada: Farm Operators Classified by Age Groups, 1941.
- (f) Live Stock.—Number and Value of Live Stock on Farms: (24) Prince Edward Island; (25) Manitoba; (26) Ontario; (27) New Brunswick; (28) British Columbia; (29) Nova Scotia; (30) Saskatchewan; (32) Alberta; (33) Quebec; (34) Canada. (58) Canada: Live Stock Bought, Born or Hatched, Sold Alive and Slaughtered on Farms, 1940.
- (g) Animal Products.—Animal Products of Farms, 1940: (39) Nova Scotia; (42) Prince Edward Island; (43) New Brunswick; (44) Manitoba; (46) British Columbia; (47) Alberta; (49) Ontario; (50) Saskatchewan; (56) Quebec; (66) Canada.

## 7. POPULATION—concluded

### I. CENSUS—concluded

#### (D) *Bulletins (rotaprinted) of the Eighth Census of Canada, 1941—concluded*

- (h) Field Crops.—Area of Field Crops, 1941: (10) Manitoba; (11) Ontario; (13) Prince Edward Island; (15) New Brunswick; (16) Alberta; (17) Saskatchewan; (19) Quebec; (20) British Columbia; (21) Nova Scotia; (23) Canada. Area, Production and Value of Field Crops, 1940, and Area, 1941: (77) New Brunswick; (78) Prince Edward Island; (79) British Columbia; (81) Manitoba; (82) Alberta; (83) Nova Scotia.
- (i) Fruit and Vegetables.—(1) The Number of Vegetable and Fruit Farms in Canada by Provinces. (2) and (7) The Number of Farms, the Number of Vegetable and Fruit Farms and the Acreage, Production and Value of Vegetables in certain Counties of the Province of Ontario. Area, Production and Value of Vegetables, 1940, and Area, 1941: (36) Ontario; (40) British Columbia; (53) Quebec; (57) New Brunswick; (60) Nova Scotia; (62) Prince Edward Island; (63) Manitoba; (64) Alberta; (65) Saskatchewan; (73) Canada. Fruits and Nursery Products, Value of Production, 1940; Number of Trees, 1941: (37) Ontario; (41) British Columbia; (55) Quebec; (59) New Brunswick; (61) Nova Scotia; (68) Prince Edward Island; (69) Manitoba; (70) Saskatchewan; (71) Alberta; (74) Canada.
- (j) Forest Products.—(35) Canada: Forest Products of Farms by Province, 1940. (80) Canada: Forest Products of Farms by County or Census Division, 1940.
- (k) Farm Indebtedness.—(52) Canada: Farm Mortgages, Agreements for Sale and Debts Covered by Liens, 1941.
- (l) Farm Machinery.—(67) Canada: Farm Machinery, 1941.
- (m) Size of Farm.—(48) Canada: Number of Occupied Farms by Size of Holding.
- (n) Tenure of Farm.—(51) Canada: Number of Occupied Farms by Tenure, 1941.
- (o) Type of Farm.—(84) Canada: Type of Farm, 1940.
- (p) Farm Revenues and Expenses.—(85) Canada: Gross Farm Revenues and Expenses, 1940.

## II. INTERCENSAL ESTIMATES OF POPULATION

### III. VITAL STATISTICS

Annual Report on Vital Statistics of Canada, *Price \$1*. Preliminary Annual Report on Vital Statistics of Canada, *Price 25 cents*. Preliminary Quarterly Report on Vital Statistics of Canada, *Price \$1 per year*. Monthly Report of Births, Deaths and Marriages Registered in Cities, *Price \$1 per year*. A Study in Maternal, Infant and Neo-Natal Mortality, 1926-43, *Price 50 cents*. Annual Report on Divorce, *Price 25 cents*. Deaths from External Violence and Due to Motor Vehicle Accidents, *Price 25 cents*. Analytical Report No. 1, Census and Estimated Populations of Canada and the Provinces by Sex and Age Group, 1931-1945.

## 8. PRODUCTION—

### I. ANNUAL SURVEY OF PRODUCTION

Including and differentiating gross and net values of: (1) Primary Production (agriculture, forestry, fisheries, trapping, mining and electric power); (2) Secondary Production (general manufactures, custom and repair, and construction); and (3) Provincial and Per Capita Analyses, with explanation of method. The latest report covers the period from 1938 to 1943 on a comparable basis, *Price 25 cents*.

### II. AGRICULTURE (*Subscription price for all publications of the Agricultural Branch, \$10 per year.*)

- (1) *General Publications*—(a) Quarterly Bulletin of Agricultural Statistics with Annual Index. The official record of current and comparable statistical data pertaining to agriculture, summarized largely from the current reports listed below, *Price \$1 per year*; (b) Reprinted from the Quarterly Bulletin of Agricultural Statistics:

## 8. PRODUCTION—continued

## II. AGRICULTURE—concluded

The influence of precipitation and temperature on wheat yields in the Prairie Provinces, 1921-1940; Net Farm Income, Canada, *Price 10 cents*; (c) Semi-annual Reports on Cash Income from the Sale of Farm Products, *Price 10 cents*; (d) Seasonal Reports on Farm Wages, *Price 10 cents*; (e) Annual Summary of Cold Storage Holdings, *Price 25 cents*; (f) Wholesale Stocks of Food Commodities in Canada in Cold and Common Storage, 1920-1939, *Price 25 cents*.

- (2) *Field Crops*—(a) Telegraphic Crop Reports, May-September, for the Prairie Provinces and for all Canada; (b) Periodic Crop Reports covering area, quality, yield and value of principal field crops and carry-over stocks of Canadian grains, *Price \$2 per year*; (c) Seasonal Reports on the Tobacco Crop with estimates of area, yield and value, *Price 10 cents each*.
- (3) *Grain and Grain Products*—(a) Annual Report on the Grain Trade of Canada, *Price 50 cents*; (b) Monthly Review of the Wheat Situation, *Price \$1 per year*; (c) Quarterly Review of Canadian Coarse Grains, *Price \$1 per year*; (d) Weekly Report on Supplies and Movement of Canadian Grain, *Price \$2 per year*; (e) Monthly Report on Milling Statistics, *Price 50 cents per year*; (f) Location of Flour and Feed Mills with Capacity, annual, *Price \$1*; (g) World Trade in Barley, 1927-1937, *Price 50 cents*.
- (4) *Live Stock and Animal Products*—(a) Annual Report on Live Stock and Animal Products Statistics, *Price 50 cents*; (b) June and December Surveys of Live Stock and Poultry, *Price 10 cents each*; (c) Annual Estimates of the Consumption of Meats, *Price 10 cents*; (d) Monthly Report on Cold Storage Holdings of Meat and Lard, *Price \$1 per year*.
- (5) *Dairy and Poultry Products*—(a) Annual Report on Dairying Statistics of Canada, *Price 25 cents*; (b) Monthly Dairy Review of Canada, *Price \$1 per year*; (c) Annual Report on the Production of Poultry and Eggs, *Price 25 cents*; (d) Annual Report on Dairy Factories Statistics, *Price 25 cents*; (e) Annual Report on the Production of Processed Cheese, *Price 10 cents*; (f) Fluid Milk Sales and Distribution, Annual Report, *Price 10 cents*; (g) Monthly Report on Cold Storage Holdings of Dairy and Poultry Products, *Price \$1 per year*; (h) Advance Preliminary Statement, monthly, of Stocks of Butter, Cheese and Eggs in the Principal Cities of Canada, *Price 50 cents per year*; (i) Annual Review on the Dairy Situation in Canada.
- (6) *Fruit and Vegetables*—(a) Monthly Condition Reports (seasonal) with Preliminary Estimates of Fruit Production, *Price \$1 per year*; (b) Monthly Reports on Cold Storage Stocks of Fruits and Vegetables, *Price \$1 per year*.
- (7) *Honey, Sugar and Maple Products*—(a) Seasonal Reports on the Production and Marketing of Honey, *Price 10 cents*; (b) Monthly Reports on Sugar Production with Annual Summary, *Price \$1 per year (not available for general distribution)*; (c) Annual Report on Maple Products, *Price 10 cents*.

## III. FURS

Advance Reports on Fur Farms—four reports are issued covering: (1) Maritimes and Ontario. (2) Quebec. (3) Prairie Provinces and British Columbia. (4) Canada, *Price 10 cents per report*. Annual Report on Fur Farms, *Price 25 cents*. The Anticipated Pelt Production of Fur Farms, Canada, *Price 10 cents*. Advance Bulletin on Statistics of the Production of Raw Furs, *Price 10 cents*. Annual Bulletin on the Production of Raw Furs, *Price 25 cents*. List of Fur Farmers in Western Canada, 1943, *Price \$1*. List of Fur Farmers in Eastern Canada (except Quebec), 1943, *Price \$1*. List of Fur Farmers in Quebec, 1943, *Price \$1*.

[NOTE.—The above list is also published separately by individual provinces, *Price 25 cents each*.]

## IV. FISHERIES

Annual Report on Fisheries Statistics, *Price 50 cents*. Advance Bulletins on Fish Caught and Marketed, by Provinces, *Price 10 cents each*; Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, The Prairie Provinces and Yukon, British Columbia, Canada. Monthly Reports on Cold Storage Holdings of Fish, *Price \$1 per year*.

## 8. PRODUCTION—continued

## V. FORESTRY

Annual Summary of the Value, etc., of Forest Production (includes operations in the woods for sawmills, shingle mills, pulp and paper mills, etc., production of mining timber, production of poles and cross ties, and farm production of firewood, posts, etc.), *Price 25 cents.*

[See also Reports on Manufactures of Forest Products listed under "Manufactures", Section VII, Subsection (5).]

## VI. MINERAL PRODUCTION (MINING AND METALLURGY)

NOTE.—Subscription price for all Mines, Metallurgical and Chemical Reports [including Reports under groups (7), (8), (9) and (10)], pp. 1159-1160.] \$15 per year.

(1) *General*—(a) Annual Report on the Mineral Production of Canada (1939, 1940, 1941 and 1942 now available), *Price \$1*; (b) Preliminary Report on the Mineral Production of Canada, 1944, *Price 25 cents*; (c) Monthly Reports on Leading Minerals—reports on gold, copper-nickel, silver-lead-zinc, clay products, petroleum and natural gas, asbestos, cement and salt. *Yearly subscription, \$1 per report.*

(2) *Coal*—(a) Annual Report on Coal Statistics for Canada (1939, 1940, 1941, 1942 and 1943 now available), *Price 50 cents*; (b) Monthly Summary Report on Coal and Coke Statistics for Canada, *Price \$1 per year.*

(3) *Annual Bulletins on Mining—Metals*—The Gold-Mining Industry in Canada (including alluvial gold mining, auriferous quartz mining, copper-gold-silver mining, and tables showing Canadian and world production of gold), *Price 50 cents.* The Silver-Mining Industry in Canada (including silver-cobalt-arsenic mining and silver-lead-zinc mining), *Price 25 cents.* The Nickel-Copper Mining, Smelting and Refining Industry, *Price 25 cents.* The Non-Ferrous Smelting and Refining Industry, *Price 25 cents.*

*Non-Metals*—Abrases, *Price 15 cents*; Asbestos, *Price 25 cents*; Feldspar and Quartz, *Price 25 cents*; Gypsum, *Price 25 cents*; Iron oxides, *Price 15 cents*; Natural Gas, *Price 25 cents*; Petroleum, Crude, *Price 25 cents*; Salt, *Price 25 cents*; Talc and Soapstone, *Price 15 cents*; Miscellaneous Non-Metallic Minerals (including barytes, fluorspar, magnesium sulphate, mineral waters, moss, peat, phosphate, silica brick, sodium carbonate, sodium sulphate), *Price 25 cents.*

*Structural Materials*—The Cement Industry, *Price 25 cents*; Clay and Clay Products, *Price 25 cents*; Lime, *Price 25 cents*; Sand and Gravel, *Price 25 cents*; Stone, *Price 50 cents.*

*The Complete Mining Series of Reports (with the exception of Coal), Price \$7.*

[See also Reports on Iron and Steel and Their Products, Manufactures of Non-Ferrous Metals, Manufactures of Non-Metallic Minerals, and Chemicals and Allied Products listed under "Manufactures", Section VII, Subsections (7), (8), (9) and (10).]

## VII. MANUFACTURES

NOTE.—For publications on water-power and central electric station statistics, see under heading "Electric Stations", p. 1159.

(1) *General*—General Report on the Manufacturing Industries of Canada, *Price 50 cents.* Geographical Distribution of the Manufacturing Industries of Canada, *Price 25 cents*; also Reports for the Provinces and Leading Cities, *Price 25 cents each*: Quebec, Ontario, British Columbia, Prairie Provinces, and Maritime Provinces. Quantity of Manufacturing Production in Canada, 1923-29; Weekly Earnings of Male and Female Wage-Earners Employed in the Manufacturing Industries of Canada, *Price 25 cents.* List of Manufacturing Establishments Employing 50 Hands or More, 1941, *Price \$5.* List of Manufacturing Establishments Employing 200 Hands or More, 1943, *Price \$5.*

(2) *Manufactures of Vegetable Products*—General Report (biennial) on Manufactures of Vegetable Products, *Price 50 cents.* Annual bulletins as follows: (a) Miscellaneous Food including Coffee, Tea and Spices, *Price 25 cents*; (b) Fruit and Vegetable Preparations including Canning, Evaporating and Preserving, and Pickles, Sauces, Vinegar and Cider, *Price 25 cents*; (c) Flour and Feed Mill Products, *Price 25 cents*; (d) Bread and Other Bakery Products, *Price 25 cents*; (e) Biscuits and Confectionery, including Cocoa and Chocolate, *Price 25 cents*; (f) Macaroni, Vermicelli, etc., *Price 15 cents*; (g) Distilled Liquors, *Price 25 cents*; (h) Breweries, *Price 25 cents*; (i) Wine, *Price 25 cents*; (j) Rubber Industry (including rubber footwear), *Price 25 cents*; (k) Prepared Breakfast Foods, *Price 15 cents*; (l) Sugar Refineries, *Price*

## 8. PRODUCTION—continued

## VII. MANUFACTURES—continued

25 cents; (m) Tobacco Products, *Price 25 cents*; (n) Vegetable Oil Mills, *Price 15 cents*; (o) Canned Foods, *Price 25 cents*; (p) Ice Cream, *Price 15 cents*; (q) Pack of Fruits and Vegetables (preliminary), *Price 10 cents*; (r) Aerated Waters, *Price 15 cents*; (s) Stock and Poultry Foods, *Price 25 cents*; (t) Stocks of Unmanufactured Tobacco on Hand, (quarterly report), *Price 50 cents*; (u) Stocks of Canned Fruits and Vegetables, (quarterly report), *Price 50 cents*.

- (3) *Animal Products and Their Manufactures*—Annual Reports as follows: The Dairy Factory Industry, *Price 25 cents*. Advance Report on Production of Dairy Factories, *Price 10 cents*. Annual bulletins: (a) Slaughtering and Meat Packing and Sausage and Sausage Casings, *Price 25 cents*; (b) Processed Cheese, *Price 10 cents*; (c) Leather Tanneries, *Price 25 cents*; (d) Miscellaneous Leather Goods, Leather Belting, Leather Boot and Shoe Findings, *Price 25 cents*; (e) Leather Boots and Shoes, *Price 25 cents*; (f) Leather Gloves and Mittens, *Price 20 cents*; (g) Fur Goods and Fur Dressing, *Price 25 cents*. Monthly bulletin on Boot and Shoe Production, *Price \$1 per year* (including annual).

(See also *Reports on Live Stock, etc., listed under "Agriculture".*)

- (4) *Textile and Allied Industries* (Biennial)—General Report on the Textile Industries of Canada, *Price 50 cents*. Annual Bulletins as follows: (a) Cotton Textiles (cloth, yarn, thread and waste), *Price 35 cents*; (b) Woollen Textiles (cloth, yarn, waste, carpets, and woollen goods, *n.e.s.*), *Price 35 cents*; (c) The Silk and Artificial Silk Industry, *Price 25 cents*; (d) Men's Factory Clothing, including men's furnishings, *Price 25 cents*; (e) Women's Factory Clothing, *Price 25 cents*; (f) Hats and Caps, *Price 25 cents*; (g) Hosiery and Knitted Goods, *Price 25 cents*; (h) Oiled Clothing and Waterproofs, *Price 15 cents*; (i) Cordage, Rope and Twine, *Price 25 cents*; (j) Corsets, *Price 15 cents*; (k) Cotton and Jute Bags, *Price 15 cents*; (l) Dyeing and Finishing of Textiles, *Price 15 cents*; (m) Awnings, Tents and Sails, *Price 15 cents*.

- (5) *Manufactures of Forest Products*—Printed Reports, *Price 50 cents each*: (a) The Lumber Industry, 1938-39; (b) The Pulp and Paper Industry, 1938-39; (c) Wood-Using Industries, 1934-36; (d) Paper-Using Industries, 1934-37. Annual bulletins: (a) The Lumber Industry, *Price 35 cents*; (b) The Pulp and Paper Industry, *Price 30 cents*; (c) Wood-Using Industries (Summary), *Price 35 cents*. Annual Preliminary Reports on Wood-Using Industries: (a) Planing Mills, Sash and Door Factories, *Price 20 cents*; (b) Veneers and Plywoods, *Price 15 cents*; (c) Hardwood Flooring, *Price 15 cents*; (d) Furniture, *Price 15 cents*; (e) Boxes, Baskets and Crates, *Price 15 cents*; (f) Carriages, Sleighs and Vehicle Supplies, *Price 15 cents*; (g) Coopers, *Price 10 cents*; (h) Coffins and Caskets, *Price 10 cents*; (i) The Wooden Refrigerator Industry, *Price 10 cents*; (j) Boat Building, *Price 10 cents*; (k) Lasts, Trees and Shoe Findings, *Price 10 cents*; (l) Handles, Spools and Woodturning, *Price 10 cents*; (m) Wooden-ware, *Price 10 cents*; (n) Excelsior, *Price 10 cents*; (o) Beekeepers' and Poultrymen's Supplies, *Price 10 cents*; (p) Miscellaneous Wood-Using Industries, *Price 10 cents*. Annual Preliminary Reports on Paper-Using Industries: (a) The Printing Trades (comprising the following industries: Printing and Publishing; Printing and Bookbinding; Lithographing; Engraving, Stereotyping and Electrotyping; Trade Composition; and Blue Printing), *Price 35 cents*; (b) Paper Boxes and Bags, *Price 25 cents*; (c) Roofing Paper, *Price 10 cents*; (d) Miscellaneous Paper Goods, *Price 10 cents*. Monthly bulletins: (a) Asphalt Roofing Production and Domestic Sales, *Price 10 cents per copy, or 50 cents per year*; (b) Production, Shipments and Stocks on Hand of Sawmills, *Price 25 cents per copy, or \$2 per year*.

NOTE.—Subscription price for all Forestry publications \$5 per year.

- (6) *Electric Stations*—(a) Annual Report on Central Electric Stations in Canada, *Price 25 cents*; (b) Report on Index Numbers of Electric Light Rates, *Price 25 cents*; (c) Report on use of Electric Energy in Industries, *Price 25 cents*; (d) Monthly Report on Output of Central Electric Stations, *Price 50 cents per year*. Subscription price for all Central Electric Station reports, \$1 per year.
- (7) *Iron and Steel and Their Products*—Biennial Report, *Price 50 cents*. Annual bulletins as follows: Preliminary Summary on the Iron and Steel Industry, *Price 15 cents*. (a) Primary Iron and Steel, *Price 25 cents*; (b) Iron Castings, *Price 25 cents*; (c) Heating and Cooking Apparatus, *Price 25 cents*; (d) Boilers, Tanks and Plate-work, *Price 25 cents*; (e) Farm Implements and Machinery, *Price 25 cents*; (f) Automobile parts and Accessories, *Price 25 cents*; (g) Automobile Statistics for Canada, *Price 50 cents*; (h) Railway Rolling-Stock, *Price 25 cents*; (i) Wire and Wire

## 8. PRODUCTION—continued

## VII. MANUFACTURES—concluded

Goods, *Price 25 cents*; (j) Sheet Metal Products, *Price 25 cents*; (k) Hardware, Tools and Cutlery, *Price 25 cents*; (l) Bridge Building and Structural Steel, *Price 25 cents*; (m) Machinery, *Price 25 cents*; (n) Bicycles, *Price 15 cents*; (o) Shipbuilding, *Price 15 cents*; (p) Aircraft, *Price 15 cents*; (q) Miscellaneous Iron and Steel Products, *Price 25 cents*; (r) Iron and Steel and Their Products (final summary), *Price 10 cents*. Commodity bulletins on the production of pig-iron, steel, washing machines, cream separators, warm air furnaces, galvanized sheets, wire nails, wire rope and cable, steel wire, wire fencing, stoves, etc. Monthly Reports: (a) Pig-Iron, Steel, and Ferro-Alloys, *Price \$1 per year*; (b) Steel Ingots, *Price \$1 per year*; (c) Automobiles, *Price \$1 per year*; (d) Domestic Washing Machines, *Price \$1 per year*; (e) Primary Iron and Steel, *Price \$1 per year*; (f) Steel Wire, *Price \$1 per year*; (g) Nails, Tacks and Staples, *Price \$1 per year*; (h) Wire Fencing, *Price \$1 per year*. Quarterly Report on Galvanized Sheets, *Price \$1 per year*.

- (8) *Manufactures of Non-Ferrous Metals*—Biennial Report, *Price 50 cents*. Annual bulletins as follows: (a) Aluminum Products, *Price 15 cents*; (b) Brass and Copper Products, *Price 25 cents*; (c) White Metal Alloys, *Price 25 cents*; (d) Jewellery and Silverware, *Price 25 cents*; (e) Electrical Apparatus and Supplies, *Price 50 cents*; (f) Miscellaneous Non-Ferrous Metal Products, *Price 15 cents*; (g) Non-Ferrous Smelting and Refining, *Price 25 cents*; (h) *Manufactures of Non-Ferrous Metals* (final summary), *Price 15 cents*. Commodity bulletins on the production of batteries, silverware, vacuum cleaners, electric motors and generators, electric transformers, incandescent lamps, etc. Monthly Reports: (a) Electric Refrigerators, *Price \$1 per year*; (b) Radio Receiving Sets, *Price \$1 per year*; (c) Dealers' Non-Ferrous Scrap, *Price \$1 per year*; (d) Ingot Makers' Scrap, *Price \$1 per year*; (e) Factory Sales of Electric Storage Batteries, *Price \$1 per year*.
- (9) *Manufactures of Non-Metallic Minerals*—Biennial Report, *Price 50 cents*. Annual bulletins as follows: Preliminary Summary on *Manufactures of Non-Metallic Minerals*, *Price 10 cents*—(a) The Asbestos Mining Industry and the Asbestos Products Industry, *Price 25 cents*; (b) The Cement Industry, *Price 25 cents*; (c) Coke and Gas, *Price 25 cents*; (d) Glass (blown, cut, and ornamental, etc.), *Price 15 cents*; (e) Gypsum Mining and Gypsum Products Industry, *Price 25 cents*; (f) Lime, *Price 25 cents*; (g) Petroleum Products, *Price 50 cents*; (h) Clay and Clay Products, *Price 25 cents*; (i) Salt, *Price 25 cents*; (j) Sand-Lime Brick, *Price 15 cents*; (k) Stone (primary and manufactures), *Price 50 cents*; (l) Abrasives, *Price 15 cents*; (m) Miscellaneous Non-Metallic Mineral Products (including carbon electrodes—gypsum products—mica products—non-metallic minerals, *n.e.s.*), *Price 15 cents*. *Non-Metallic Mineral Products* (final summary), *Price 15 cents*. Special Report on the Consumption of Coke in Canada, *Price 25 cents*. Monthly Report on Coal and Coke Statistics, *Price \$1 per year*. Monthly Report on Concrete Building Bricks, Blocks and Cement Pipe, *Price \$1 per year*. Commodity Bulletins on (a) Gypsum Products; (b) Pack Wool, etc., *Price \$1 per year*.
- (10) *Chemicals and Allied Products*—Biennial Report, *Price 50 cents*. Annual bulletins as follows: Preliminary Summary on *Chemicals and Allied Products*, *Price 15 cents*—(a) Coal Tar Distillation, *Price 15 cents*; (b) Acids, Alkalis and Salts, *Price 15 cents*; (c) Compressed Gases, *Price 15 cents*; (d) Fertilizers, *Price 15 cents*; (e) Medicinal and Pharmaceutical Preparations, *Price 25 cents*; (f) Paints, Pigments and Varnishes, *Price 25 cents*; (g) Soaps, Washing Compounds and Cleaning Preparations, *Price 25 cents*; (h) Toilet Preparations, *Price 25 cents*; (i) Inks, *Price 15 cents*; (j) Adhesives, *Price 15 cents*; (k) Polishes and Dressings, *Price 15 cents*; (l) Hardwood Distillation, *Price 15 cents*; (m) Miscellaneous Chemical Products (including boiler compounds—plastics—insecticides—sweeping compounds—disinfectants—matches—dyes and colours—chemical products, *n.e.s.*), *Price 15 cents*. *Chemicals and Allied Products* (final summary), *Price 15 cents*. Commodity bulletins on Sulphuric Acid, Ammonium Sulphate, etc. Special Report—Fertilizer Trade in Canada, *Price 25 cents*; Directory of Chemical Industries in Canada as of Jan. 1, 1938, *Price \$1*; Consumption of Chemicals in Municipal Waterworks in Canada, 1942 and 1943, *Price 25 cents*. Monthly Reports on Sales of Paints, Varnishes and Lacquers, *Price \$1 per year*.
- (11) *Miscellaneous Manufactures*—General Report, *Price 25 cents*. Annual Bulletins as follows: (a) Brooms, Brushes and Mops, *Price 15 cents*; (b) Musical Instruments (including pianos, organs and phonographs) and Musical Instrument Materials and Parts, *Price 15 cents*; (c) Buttons, *Price 15 cents*; (d) Bed Springs and Mattresses, *Price 15 cents*; (e) Sporting Goods, *Price 15 cents*.

**8. PRODUCTION—concluded****VIII. CONSTRUCTION**

Monthly and Annual Report on Building Permits, *Price \$1 per year*. Annual Report, separately, *Price 25 cents*. Annual Report on the Construction Industry in Canada, *Price 25 cents*. Preliminary Report on Construction, *Price 25 cents*.

*Housing*—Annual Report on Housing Statistics, 1945, by Dwelling Units, Type of Buildings and Type of Construction, *Price 25 cents*; Annual Supplement to Housing Statistics, *Price 25 cents*; Monthly Reports of New Housing Construction, *Price 10 cents per copy*. *Subscription price for all Housing reports, \$1 per year*.

**National Film Board.**—The National Film Act (1939, c. 20).

**National Health and Welfare.**—*National Health:* The Department of National Health and Welfare (1944, c. 22); Food and Drugs (76 and amendments); Proprietary or Patent Medicine (151); Quarantine (168); Public Works Health (91); Leprosy (119); Canada Shipping (Part V) (Sick Mariners and Marine Hospitals) (1934, c. 44 and amendments); Opium and Narcotic Drug (1929, c. 49 and amendments); Indian Act (81 and amendments). *Welfare:* Department of National Health and Welfare (1944, c. 22); Family Allowances (1944, c. 40); National Physical Fitness (1943, c. 29); Old Age Pensions (156).

**National Revenue.**—Customs (42); Customs Tariff (44); Excise (60); Export (63); Income War Tax, 1917 (97); Special War Revenue, 1915 (179). *The following Acts are administered in part:*—Animal Contagious Diseases (6); Canada Shipping (1934, c. 44); Copyright (32); Customs and Fisheries Protection (43); Dairy Industry (45); Destructive Insect and Pest (47); Explosives (62); Export of Gold (1932, c. 33); Fertilizers (69); Food and Drugs (76); Fruit, Vegetables and Honey (1935, c. 62); Importation of Intoxicating Liquors (1928, c. 31); Inspection and Sale (100); Live Stock and Live Stock Products (1939, c. 47); Maple Sugar Industry (1930, c. 30); Meat and Canned Foods (77); Opium and Narcotic Drug (144); Patent and Proprietary Medicine (151); Pest Control Products (5); Precious Metals Marking (84); Quarantine (168); Seeds (185); Transport (1938, c. 53); Weights and Measures (212).

**Post Office.**—Post Office (161); Special War Revenue (in part) (179).

**Public Archives.**—Public Archives (8).

**Public Works.**—Expropriation (64); Ferries (68); Government Harbours, Piers and Breakwaters (Section 5) (89); Navigable Waters Protection (Part 1) (140); Public Works (166); Government Works Toll (167); Railway (Section 248) (170); Dry Docks Subsidies (191); Telegraphs (194); National Art Gallery (1913, c. 33); Act Regulating Vehicular Traffic on Dominion Property (1930, c. 47).

**Reconstruction and Supply.**—Department of Reconstruction Act (1944, c. 18; 1945, c. 16).

**Secretary of State.**—Companies (27) as amended; Naturalization (138) as amended; Patents (150) as amended; Copyright (32) as amended; Unfair Competition (1932, c. 38); Canada Temperance (196); Boards of Trade (19) as amended; Ticket of Leave (197) as amended; Trade Unions (202); Companies' Creditors Arrangement (1932-33, c. 36); Canadian Nationals (21); Department of State (189); Translation Bureau (1934, c. 25); Treaties of Peace Acts and Orders in Council; Reparation Payment Act (1929, c. 55); Timber Marking (198) as amended; Trade Mark and Design (201) as amended; Public Officers (164); Shop Cards Registration (1938, c. 41); Bankruptcy (11) as amended; Revised Regulations respecting Trading with the Enemy (1943); The Patents, Designs, Copyright and Trade Mark (Emergency) Order (1939); Seals Act (1939, c. 22); Oaths of Allegiance Act (143) as amended.

**Trade and Commerce.**—Department of Trade and Commerce Act (200); Canada Grain Act (1930, c. 5; 1932-33, cc. 9, 24; 1934, c. 26; 1938, c. 5; 1939, c. 36; 1940, c. 6); Electricity and Fluid Exportation (54); Electricity Inspection (55); Electric Units (56); Gas Inspection

(82); Inland Water Freight Rates (208); Precious Metals Marking (84) and (1928, c. 40; 1929, c. 53; 1934, c. 14; 1935, c. 9; 1937, c. 15; 1940-41, c. 8; 1942, c. 6); Statistics (190); Weights and Measures Inspection (212) and (1935, c. 48; 1937, c. 18); Canadian Wheat Board (1935, c. 53; 1939, c. 39; 1940, c. 25; 1942, c. 4); Dominion Trade and Industry Commission (1935, c. 59; 1939, c. 17); Grain Futures (1939, c. 31); Export Credits Insurance Act, 1944, c. 39; Canadian Commercial Corporation, 1946.

**Transport.**—Canada Shipping (1934, c. 44); Government Harbours and Piers (89); Live Stock Shipping (122); Navigable Waters Protection (Part II) (140); Government Vessels Discipline (203); The Water-Carriage of Goods (1936, c. 49); Belleville Harbour Commission (1889, c. 35); Hamilton Harbour Commission (1912, c. 98); North Fraser Harbour Commission (1913, c. 162); New Westminster Harbour Commission (1913, c. 158); Trenton, Ontario, Harbour Commission (1922, c. 50); Toronto Harbour Commission (1911, c. 26); Winnipeg and St. Boniface Harbour Commission (1912, c. 55); National Harbours Board (1936, c. 42); Department of Transport (171) as amended (1936, c. 34); Government Railways (173); Intercolonial and Prince Edward Island Railways Employees' Provident Fund (1907, c. 22); National Transcontinental Railway (1903, c. 71); Canadian National Railways (172); Government Employees' Compensation (30); Canadian National Steamships (1927, c. 29); Maritime Freight Rates (79); Canadian National-Canadian Pacific (1933, c. 33) as amended (1936, c. 25; 1939, c. 37); Railway (170); Trans-Canada Air Lines (1937, c. 43); Aeronautics (3); Transport, 1938 (1938, c. 53); Radio, 1938 (1938, c. 50); An Act Respecting the Beauharnois Light, Heat and Power Co; (1931, c. 19, 20; 1940, c. 20); Bridges (20); Montreal Terminals (1929, c. 12); Telegraphs (194, Part III); Canadian National Railways Pensions (1929, c. 4); Department of Transport Stores (1937, c. 28); Passenger Tickets (c. 174); Toronto Terminals Railway Company (1906, c. 170) Canadian National Capital Revision (1937, c. 22).

**Veterans Affairs.**—Department of Veterans Affairs Act (1944, c. 19); Pension Act (157 and amendments); Veterans Rehabilitation Act (1945, c. 35); Soldier Settlement Act, (188 and amendments); Veterans' Insurance Act (1944, c. 49); Veterans' Land Act (1942-43, c. 33; 1945, c. 34); Vocational Training Co-ordination Act (1942, c. 34); War Service Grants Act (1945, c. 38); War Veterans' Allowance Act (1930, c. 48 and amendments).

### Section 3.—Publications of Dominion Departments\*

*NOTE.*—The Department of Public Printing and Stationery issues an annual catalogue with quarterly supplements, containing titles and selling prices of official publications, Price 25 cents.

Intending purchasers should be careful to give the exact title of the publication desired and prepayment of charges is required with each order. Remittances by postal money order, express order or accepted cheque made payable to the Receiver General of Canada should be mailed to the King's Printer, Ottawa. The use of currency for this purpose is contrary to the advice of the postal authorities and entails a measure of risk. Postage stamps and foreign money will not be accepted. The Special War Revenue Act requires that no person shall issue a cheque payable at or by a bank unless there is affixed thereto an excise or postage stamp; cheques up to and including \$100, 3-cent stamp and cheques over \$100, 6-cent stamp.

No extra charge is made for postage on documents forwarded to points in Canada and the United States, but cost of postage is added to the selling price as indicated when publications are to be mailed to other countries.

There appears to be a widespread view that statutes, blue books and other publications are distributed free of charge by the King's Printer, and it is desirable to correct this impression. In the case of certain publications a limited free distribution is made by the King's Printer under authority of Order in Council.

**Agriculture.**—Annual Reports of the Minister, the Veterinary Director General, and Progress Reports of the Dominion Agrostologist, 1934-36; Dominion Animal Husbandman, 1930-36; Dominion Apiarist, 1934-36; Dominion Bacteriologist, 1937; Dominion Botanist, 1935-37; Dominion Cerealists, 1934-37; Dominion Chemist, 1934-36; Dominion Horticulturist, 1931-33; Dominion Poultry Husbandman, 1934-36; Economic Fibre Production, 1934-36; Tobacco Division, 1931-34; Illustration Stations, 1934-38. Divisions of the Experimental Farms Service. Progress Reports covering the work conducted on the Experimental Farms and Stations located at Agassiz, B.C., 1931-35; Brandon, Man., 1931-36; Farnham, Que., 1931-35; Fort Vermilion, Alta., 1931-38; Kapuskasing, Ont., 1936-40; Kentville, N.S., 1931-36; L'Assomption, Que., 1930-36; Lennoxville, Que., 1931-36; Manyberries, Alta., 1927-36; Nappan, N.S., 1932-36; Regina, Sask., 1931-36; St. Joachim Horse Farm, 1919-40; Sunnyside Fox Ranch, P.E.I., 1935-41; Swift Current, Sask., 1931-36. Bulletins and circulars of the Experimental Farms Service and Science Service on a great variety of agricultural subjects, including publications of the following Divisions: Field Husbandry; Animal Husbandry; Horticulture; Cereal; Chemistry; Forage Plants; Botany; Entomology; Animal Pathology; Poultry; Tobacco; Economic Fibre; Bacteriology; Bees; and Illustration Stations. Bulletins and circulars from the various Divisions of the Production Service and Marketing Service including publications of the Dairy Products Division relating to the dairying and cold storage industries in Canada, the making of butter and cheese, dairying experiments, co-operation, etc. Reports, bulletins, circulars, etc., of the Live Stock and Live Stock

\* Compiled from information supplied by the respective Departments.

Products Division on cattle, sheep, swine, and poultry, marketing of eggs, wool, etc. Bulletins of the Health of Animals Division with regulations as to: contagious abortion; rabies; sheep scab; actinomycosis; anthrax; glanders; hog cholera; tuberculosis; foot-and-mouth disease; quarantine; and meat inspection. Bulletins and reports of the Plant Products Division as to seed-testing, the production and use of seed grains, the Seed Control Act, the Feeding Stuffs Act, and the Fertilizers Act. Bulletins and circulars of the Plant Protection Division and instructions to importers of nursery stock. Bulletins and reports of the Fruit and Vegetable Division relating to the marketing of fruits and vegetables and their preservation, the Fruit, Vegetables and Honey Act, and the Maple Sugar Industry Act.

A pamphlet entitled "List of Publications" contains a list of the publications of the Department, numbering more than 400. These publications include reports, bulletins, and circulars on field crops, live stock, dairying, orchard and garden, animal, insect, and plant diseases, bee-keeping, poultry, and miscellaneous topics. With few exceptions, the publications of the Department are free on application to its Publicity and Extension Division.

**Auditor General.**—Annual Report—incorporated with the "Public Accounts of the Dominion of Canada".

**Board of Transport Commissioners for Canada.**—Annual Report. Pamphlet Containing Judgments, Orders, Regulations, and Rulings, issued fortnightly.

**Canadian Information Service.**—Airmail Bulletin (daily, mimeographed)—Digest of public affairs in Canada, intended principally for the information of official representatives and other Canadians abroad who are out of quick reach of Canadian newspapers. C.I.S. Weekly (Documentation hebdomadaire) (mimeographed)—Provides background on significant Canadian events, national and provincial. It amplifies the brief items of the Airmail Bulletin. Weekly Press Survey (mimeographed)—A summary of editorial opinion in French and English Canadian daily newspapers and some of the weeklies. Informaciones Canadienses (weekly, mimeographed)—Digest of Canadian events for circulation principally in Latin America. Reference Papers (pages documentaires) (issued irregularly, mimeographed)—Studies of various aspects of Canada ranging from the survey of Canadian food record in the war and post-war periods to studies of Canadian industries. Intended to provide in handy form material that can be used by editors, journalists, teachers and students in other countries. Booklet on Canada (printed)—A popular illustrated booklet designed to present general background information about Canada to those with no specialized knowledge of the country. Occasional Publications (printed)—All C.I.S. publications are patterned to meet a definite need and are designed for distribution outside of Canada. From time to time publications such as the booklet recently prepared for distribution at the book fair in Mexico City are brought out by C.I.S.

**Civil Service Commission.**—Annual Report. Regulations of the Civil Service Commission. The Classification of the Civil Service of Canada. Positions exempted from the Civil Service Act. Pamphlets dealing with examinations for various kinds of positions which are filled by the Commission including Clerks, Stenographers and Typists; Customs Services; Postal Services; Positions open to graduates and under-graduates in Agriculture and related courses. Also pamphlets giving some idea of the positions that are filled by oral examinations only; positions for which a written examination is required; and positions of professional, technical or other special character.

**External Affairs.**—Annual Report. Annual Treaty Series. Canadian Representatives Abroad and British Commonwealth and Foreign Government Representatives in Canada. Diplomatic List with which is included the list of British Commonwealth Representatives and of Consuls General in Ottawa.

**Finance.**—Annual Report on the Public Accounts of the Dominion of Canada. Monthly Statements of the Chartered Banks of Canada. Estimates. Reprint of the Budget Speech of the Minister of Finance. Report of the Royal Canadian Mint.

#### **Fisheries.**—

*NOTE.*—Publications of the Department of Fisheries are distributed at the discretion of the Department and applicants for any papers should indicate the purposes for which they are desired. In some cases charges may be made.

(Publications marked \* are available in both English and French editions). \*Annual Report, including Fish Culture Report. Annual Statistical Report (contains both English and French Sections). Fish Culture Report. \*Canada's Fisheries. Map of the Atlantic Coast Provinces showing the Inshore and Deep-Sea Fishing Grounds. Statistics of the Haddock Fishery in North American Waters—A. W. H. Needler. Statistics of the Catch of Cod off the East Coast of North America, 1926—O. E. Sette. Statistics of the Mackerel Fishery off the East Coast of North America, 1804 to 1930—O. E. Sette and A. W. H. Needler.

Discoloration, Smut or Blackening of Canned Lobsters—Harrison and Hood. Historical Account of the Lobster-Canning Industry—R. H. Williams. \*Fish Canning in Canada (non-technical). \*Fisheries News Bulletin (monthly). \*The Salmon Fishery of British Columbia. Report on Fisheries Investigations in Hudson Bay, 1930. \*Summary of the Report by Messrs. Cockfield, Brown and Company, Limited, on the Marketing of Canadian Fish and Fish Products. \*Factors in the Shipment of Live Lobsters from Eastern Nova Scotia. \*The Life of the Atlantic Salmon. \*Proceedings No. 1 of the North American Council on Fishery Investigations, 1921-30, \*Proceedings No. 2, 1931-33, and \*Proceedings No. 3, 1934-36. \*Report of the Royal Commission Investigating the Fisheries of the Maritime Provinces and the Magdalen Islands, 1927. The Storage of Oysters—A. W. H. Needler. \*Memoranda dealing with certain methods of fish processing. (Correspondents asking for papers in this group must indicate the particular processing method about which they wish information; these memoranda are not intended for the general reader). \*Memoranda descriptive of some fish hatchery methods. \*Mimeographed circular—Fish in the Diet. A fish cookery booklet, \*100 Tempting Fish Recipes, is made available to women by the Department. *No charge is made to women for single copies of the cookery pamphlet, but quantity lots are not supplied free, except under certain specific conditions.* \*Mimeographed circular Home Canning of Fish. \*Mimeographed memoranda relative to several species of Canadian fish and shellfish. Oyster Farming in Eastern Canada, by A. W. H. Needler; to members of the general public the price of this bulletin is 70 cents a copy, to persons carrying on oyster farming in Canada 25 cents; a mimeographed \*memorandum regarding the hardening of mud bottoms for oyster culture is available, *free*, to persons in the oyster industry.

**Insurance.**—Annual Statement showing List of Registered Insurance Companies. Annual Abstract of Statements of Registered Insurance Companies (subject to correction). Annual Reports of the Insurance Department, Vol. I (Fire and Miscellaneous), Vol. II (Life Companies and Fraternal Benefit Societies). Annual List of Securities held by Insurance, Trust and Loan Companies, with Department's Valuation thereof. Annual Report of Loan and Trust Companies. Annual Report of Small Loans Companies and Money-Lenders. Classification of Fire Insurance Risks. Table of Bond Values. Statistical Report of Fire Losses in Canada.

**Justice.**—Annual Report of the Superintendent of Penitentiaries. Canadian Constitutional Decisions of the Judicial Committee, *Price \$5*.

**King's Printer and Controller of Stationery.**—Annual Report. The Annual Statutes. The Canada Gazette (published weekly). Annual Catalogue with quarterly supplements. Official Reports of Parliament (prices per session): The Senate—Debates \$3, Minutes of Proceedings \$1; House of Commons—Debates \$3, Votes and Proceedings \$1, Orders of the Day \$1; Bills of the Senate and House of Commons (Public and Private) \$3. Revised Statutes of Canada, 1927, 5 volumes, \$10. Annual Statutes, 1928 to 1943, \$5 each. Acts (Public and Private), with amendments to date, 10 cents to \$1.50 per copy. Index of Local and Private Acts, 1867-1941, and Table of Public Statutes, 1907-1942, \$2. British North America Acts and Selected Statutes, 1867-1943, *paper edition \$1.50, cloth edition \$2*. Annual Departmental Reports at various prices. Periodicals: Agricultural Statistics (Quarterly Bulletin), *yearly \$1, single copies 25 cents*. Bank Statements (monthly), *yearly \$1, single copies 10 cents*. Board of Transport Commissioners (Fortnightly Review of Judgments, etc.), *yearly \$3, single copies 20 cents*. Business Statistics (Monthly Review), *yearly \$1, single copies 10 cents*. Canada Gazette (weekly), *yearly \$8, single copies 20 cents*. Canada Law Reports (including Exchequer Court Reports) (monthly), *yearly \$6, single Parts 75 cents*. Canadian Official Postal Guide, *cloth \$1, Monthly Supplements, yearly 25 cents*. Statutory Orders and Regulations (weekly), *yearly \$5, single copies 10 cents*. Miscellaneous publications at various prices (quoted prices are for Canada and the United States only unless otherwise specified).

**Labour.**—*Monthly.*—The Labour Gazette (published in English and French), *Subscription price 20 cents per annum, postage prepaid, to subscribers in Canada, the United States of America and Mexico, and \$1 per annum, postage prepaid, to subscribers in all other countries.* *Annual.*—Report of the Department of Labour (separate reprints are issued of the chapters dealing with the administration of the following statutes: Industrial Disputes Investigation Act; Government Annuities Act; Employment Offices Co-ordination Act; Technical Education Act; Combines Investigation Act; Youth Training Act). Report on Wages and Hours of Labour in Canada. Report on Strikes and Lockouts in Canada and Other Countries. Report on Labour Organization in Canada. Report on Labour Legislation in Canada (from time to time there are issued consolidated reports, the most recent of which reproduces the text or a summary of all Dominion and provincial labour legislation in existence at Dec. 31, 1937). Report of Dominion-Provincial Youth Training Program and Dominion-Provincial War Emergency Training Program. *General Reports.*—Report of Canadian Government Delegates to the Twenty-Seventh Session of the International Labour Conference, Wages in the Primary Textiles Industry in Canada, 1943, Collective Agreements in the Pulp and Paper Industry in Canada, 1944. Union Status in Collective Agreements in the Iron and Steel Industry in Canada, 1945. Report of National War Labour Board.

Report of Judicial Proceedings Respecting Constitutional Validity of the Industrial Disputes Investigation Act, 1907, and Amendments of 1910, 1918 and 1920. The Employment of Children and Young Persons in Canada. Trade Union Law in Canada, Wartime Orders in Council Affecting Labour. Workmen's Compensation in Canada. Labour Legislation in Canada, a Historical Outline of the Principal Dominion and Provincial Labour Laws, August, 1945. Legislation concerning Employment. Recommended Practice of Industrial Lighting. Final Report of the National Employment Commission. *Reports of Investigations under the Combines Investigation Act.*—(1) Report of Commissioner on Alleged Combine in the Distribution of Fruit and Vegetables in Western Canada, 1925; (2) Report of Registrar on Alleged Combine Limiting Competition in the Marketing of New Brunswick Potatoes, 1925; (3) Report of Registrar on Alleged Combine in the Manufacture and Sale of Bread in the City of Montreal, 1926; (4) Report of Commissioner on Alleged Combine in the Distribution of Fruits and Vegetables Produced in Ontario, 1926; (5) Interim Report of Registrar on the Proprietary Articles Trade Association, an Alleged Combine of Wholesale and Retail Druggists and Manufacturers, Established to Fix and Maintain Resale Prices of Proprietary Medicines and Toilet Articles, 1926; (6) Report of Commissioner on the Proprietary Articles Trade Association, 1927; (7) Report of Commissioner on the Amalgamated Builders' Council and Related Organizations, an Alleged Combine of Plumbing and Heating Contractors and Others in Ontario, 1929; (8) Report of Commissioner on the Electrical Estimators' Association, an Alleged Combine of Electrical Contractors in the City of Toronto, 1930; (9) Report of Registrar on Alleged Combine in the Bread-baking Industry in Canada, 1931; (10) Report of Commissioner on Alleged Combine in the Motion Picture Industry in Canada, 1931; (11) Report of Registrar on Alleged Combine of Tobacco Manufacturers and Other Buyers of Raw Leaf Tobacco in Ontario, 1933; (12) Report of Registrar on Alleged Combine in the Importation and Distribution of British Anthracite Coal in Canada, 1933; (13) Report of Commissioner under the Inquiries Act on Anthracite Coal, 1937; (14) Report of Commissioner on Alleged Combine in the Distribution of Tobacco Products in Alberta and Elsewhere in Canada, 1938; (15) Report of Commissioner on Alleged Combine in the Manufacture and Sale of Paperboard Shipping Containers and Related Products, 1939; (16) Report of Commissioner on Alleged Combine of Wholesalers and Shippers of Fruits and Vegetables in Western Canada, 1939. *Bulletins in Industrial Relations Series.*—(1) Joint Councils in Industry; (2) Report of a Conference on Industrial Relations Held at Ottawa in 1921; (3) Report of Joint Conference of the Building and Construction Industries in Canada, 1946; (5) Canada and the International Labour Conference; (7) Canadian Railway Board of Adjustment No. 1, (Reports 2-9 inclusive); (8) Report of National Conference Regarding Winter Employment in Canada, 1924.

**Mines and Resources.**—MINES AND GEOLOGY BRANCH.—Annual Report separate. *Bureau of Geology and Topography.*—Mémorial 239 Mesozoic Stratigraphy of the Eastern Plains; Geological Survey Bulletin No. 1—A Day in the Arctic, by J. D. Bateman; Geological Survey Bulletin No. 2—The Magnetometer as an Aid in Geological Mapping, by J. W. Ambrose; Paper 44-17, Revision of Lower Cretaceous of Western Interior of Canada, by F. H. McLearn (reprint); Paper 45-9, Manson Creek Map Area, B.C., by J. E. Armstrong; Paper 45-11, Entrance, Alberta, by A. H. Lang; Paper 45-12, Gold Deposits East of Flin Flon, Manitoba, by J. D. Bateman; Paper 45-13, Pedley Map Area, Alberta, by E. J. W. Irish; Paper 45-14, McVeigh Lake Map Area, Manitoba, by J. D. Bateman; Paper 45-16, Canol Geological Investigations in Mackenzie River Area, by G. S. Hume and T. A. Link; Paper 45-17, Western Beauchastel, Quebec, by J. W. Ambrose and S. A. Ferguson; Paper 45-19, Fall Creek Map Area, Alberta, by J. F. Henderson; Paper 45-20, Greenwood-Phoenix Area, B.C., by D. A. McNaughton; Paper 45-21, Geological Reconnaissance along Canol Road from Teslin River to MacMillan Pass, Yukon, by E. D. Kindle; Paper 45-22, Geological Reconnaissance along Lower Liard River, N.W.T., Yukon and B.C., by C. O. Hage; Paper 45-24, Saunders Map Area, Alberta, by O. A. Erdman; Paper 45-27, Upper Cretaceous, Dunvegan Formation of Northwest Alberta, and Northeast British Columbia, by F. H. McLearn; Paper 45-28, Lower Triassic of Liard River, by F. H. McLearn; Paper 45-29, Recent Exploration of Deep Well Drilling in Mackenzie River Valley, N.W.T., by J. S. Stewart. *National Museum of Canada.*—Bulletin 99, Mammal Investigations on the Canol Road, Yukon and Northwest Territories, 1944, by A. L. Rand; Bulletin 100, Mammals of Yukon, Canada, by A. L. Rand; Bulletin 101, The Alpine Flora of the East Slope of Mackenzie Mountains, N.W.T., by A. E. Forsild. *Bureau of Mines.*—List No. 1-2, Part 1, Milling Plants in Canada; Report of the Explosives Division for the Calendar Years, 1939 to 1943 inclusive; Memo. 89—Physical and Chemical Survey of Coals from Canadian Collieries (No. 4). N.B.—Minto Coalfield, by E. Swartzman, J. H. H. Nicolls, E. J. Burrough, and R. E. Gilmore; Publication 815—The Canadian Mineral Industry in 1944.

**LANDS, PARKS AND FORESTS BRANCH.**—*Northwest Territories.*—The Northwest Territories—Administration, Resources, Development; An Outline of the Canadian Eastern Arctic—Its Geography, Peoples, and Problems; Physical Geography of the Canadian Eastern Arctic; Mineral Resources and Mining Activity in the Canadian Eastern Arctic; Eskimo Population in the Canadian Eastern Arctic; Economic Wildlife of Canada's Eastern

Arctic—Caribou; A Brief History of Exploration and Research in the Canadian Eastern Arctic; The Conquest of the Northwest Passage by R.C.M.P. Schooner *St. Roch*; Land Use Possibilities in Mackenzie District, N.W.T.; Water Transportation in the Canadian Northwest; Fur Production in the Northwest Territories; Weather and Climate of the Northwest Territories; Conserving Canada's Musk-oxen; Regulations Respecting Game in the Northwest Territories. *Yukon Territory*.—The Yukon Territory—Administration, Resources, Development; Yukon, Land of the Klondike; Agriculture and Forests of Yukon Territory; Game Ordinance and Fur Export Tax Ordinance of Yukon Territory.

*National Parks Bureau.*—(*Illustrated Booklets*)—Canada's Mountain Playgrounds (Banff, Jasper, Kootenay, Yoho, Waterton Lakes, Glacier, and Mount Revelstoke National Parks); Playgrounds of the Prairies (Riding Mountain, Prince Albert, Elk Island, Nemiskam, and Wood Buffalo National Parks); Playgrounds of Eastern Canada (Cape Breton Highlands, Prince Edward Island, Georgian Bay Islands, St. Lawrence Islands and Point Pelee National Parks); Geology of the National Parks in the Rockies and Selkirks, *Price 10 cents*; Catalogue of Films Produced by the National Parks Bureau; National Historic Sites (marked on the recommendation of the Historic Sites and Monuments Board of Canada); (Leaflets)—Fort Chambly National Historic Park; Port Royal National Historic Park; Fort Wellington National Historic Site; Guide du Fort Chambly; Guide du Fort Lennox; Le Parc historique du Fort de Chambly; (*Information Folders*)—Banff National Park; Jasper National Park; Waterton Lakes National Park; Kootenay, Yoho, Glacier, and Mount Revelstoke National Parks; Elk Island National Park; Prince Albert National Park; Riding Mountain National Park; Cape Breton Highlands National Park; Prince Edward Island National Park; The National Parks of Canada in Ontario (Point Pelee, St. Lawrence Islands and Georgian Bay Islands National Parks). *Migratory Birds*.—Migratory Birds Convention Act, and Dominion Regulations for the Protection of Migratory Birds; Bird Houses and their Occupants; Lessons in Bird Protection; The Blue Goose (*Price, 60 cents*); L'Art d'Attirer les Oiseaux en leur offrant le Manger et le Boire; Maisons d'Oiseaux et Leurs Occupants; Leçons concernant la Protection des Oiseaux.

*Dominion Forest Service.*—(52) Summary of Stand and Increment—Manitoba and Saskatchewan (Rate of Growth Survey Data, 1929–30, Mixedwood Section of the Boreal Forest Section, 1937; (57) Thinning and Pruning Experiment, Red Pine Plantation, Rockland, Ont., 1939; (58\*) General Outline for Reproduction Studies, 1939; (59\*) Some Simple Management Methods Applied to Farmers' Woodlots, 1939; (60) Some Observations on a Visit to New England and New York, Sept. 13 to 21, 1938. (Heimbürger, Nov., 1939), 1939; (64) Silvicultural Research Operations, 1939–40; (65) Site Types and Rate of Growth, Lake Edward, Que., 1941; (66) Forest Site Classification and Soil Investigation on Lake Edward, Que., Forest Experimental Area, 1941; (67) Cleaning of Scattered Young Balsam Fir and Spruce in Cut-over Hardwood Stands, Lake Edward, Que. (Project No. 7), 1941; (68) Improvement Cuttings in Intolerant Hardwood Conifer Type, Lake Edward, Que. (Project No. 10), 1941; Miscellaneous Series; No. 1, Suggestions for Woodlot Planting, 1939; No. 2 Supplementary Form Class Volume Tables, 1941; No. 3, Interpolated Volume Tables (Total Volume) for Use in Compilation of Sample Plot Data, 1944; (70) Some Growth Characteristics of Red Spruce, 1942; (71) Forest Growth on the Upper Lievre Valley, Que., 1942; (72) Dominant Height and Average Diameter as a Measure of Site in Untreated Even-aged Lodgepole Pine Stands, 1942; (73) Empirical Stand Density Yield Tables, 1944; (74) Succession Cutting in Pine, 1945; (75) Some Observations on Silvicultural Cutting Methods, 1945; (76) Knot-free Red Pine by Debudding, 1945; (77) Growth of Aspen, 1945; (78) Effect of Different Methods of Slash Disposal on Jack Pine Reproduction; Silvicultural Leaflets Nos. 1–21.

*Forest Products Laboratories.*—Commercial Timber of Canada; Veneers, Plywood, and Glue; The Mechanical and Physical Properties of Canadian Woods in Relation to Their Use; The Seasoning of Lumber; Decay and Stains in Wood; Preservative Treatment of Wood for Protection from Decay, Insects, Marine Borers and Fire; Pulp, Paper and Related Products; The Structure and Identification of Wood; The Chemical Utilization of Wood.

*SURVEYS AND ENGINEERING BRANCH.*—Annual Report Separate Surveys and Engineering Branch. *Dominion Observatory, Ottawa*—Seismological Bulletin (monthly); Wireless Time Signals (monthly); Vol. XIII, Nos. 17, 18, Bibliography of Seismology; Rockburst Research at Lake Shore Mines; Industrial Earthquake Hazards in Eastern Canada; The Figure of the Earth. *Dominion Astrophysical Observatory, Victoria, B.C.*—The Material of Interstellar Space; The Practical and Commercial Value of Astronomy; The P Cygni Characteristics of H D 190603; Curves of Growth for Neutral and Ionized Atoms in the Spectrum of  $\alpha$  Persei. *Geodetic Service*—Altitudes in Alberta South of 15th Base Line, *Price 50 cents*. Manual of Geodetic Levelling, *Price 25 cents*. *Dominion Water and Power Bureau*—Water Resources Paper No. 88, Surface Water Supply of Arctic and Western Hudson Bay Drainage in Alberta, Saskatchewan and Manitoba and parts of British Columbia and

\* Also French edition.

Western Ontario, 1939-40 and 1940-41. *Hydrographic Service*—Tide Tables for Atlantic Coast and Pacific Coast, *Price 25 cents each*; Tide Tables, regional abridged editions, *Price 10 cents each*. Sailing Directions for the Saint John River, *Price 50 cents*; Southeast Coast Nova Scotia and Bay of Fundy Pilot, *Price \$1.25*; Gulf of St. Lawrence Pilot, *Price \$1.25*; Sailing Directions for the Hudson Bay Route, *Price 50 cents*; Sailing Directions for Lake Melville, *Price 50 cents*; St. Lawrence Pilot (below Quebec), *Price \$1.25*; St. Lawrence Pilot (Quebec to Montreal), *Price 50 cents*; St. Lawrence Pilot (Montreal to Kingston), *Price 50 cents*; Great Lakes Pilot, Volume I, *Price \$1*; Great Lakes Pilot, Volume II, *Price \$1.25*; Great Lakes Pilot, Volume III, *Price \$1.25*; British Columbia Pilot, Volume I, *Price \$1.50*; British Columbia Pilot, Volume II, *Price \$1.50*. Official navigation charts for Atlantic and Pacific Coasts of Canada, Hudson Bay, Great Lakes and other inland navigable waters. Precise Water Level Reports (Great Lakes and St. Lawrence Waterway). Catalogue of Nautical Charts, Sailing Directions and Tidal Information.

**National Defence.**—Annual Report; The King's Regulations for the Government of His Majesty's Canadian Naval Service; Canadian Navy List; Naval General Orders; General Orders, Army; Canadian Army Routine Orders; Flying Regulations, R.C.A.F.; Air Force General Orders; King's Regulations for the Royal Canadian Air Force; Financial Regulations for the Royal Canadian Air Force on Active Service, 1945.

**National Film Board.**—(Publications marked \* are available in both English and French.) *Periodicals.*—Canada in Action; Study Guides (film notes for rural circuits); Community News (film notes for community film users). *Special publications.*—\*16mm Film Catalogue (1945); 16mm Films in Spanish (leaflet on Canadian films distributed in Latin American countries; \*Facts about the National Film Board, 1946 Ed.; \*Canadian Image; Movies for Workers; \*Rehabilitation leaflet. *United States Editions.*—16mm Film Catalogue and 1946 Supplement; \*The Arts in Canada and the Film (illustrated).

**National Health and Welfare.**—Annual Report of the Deputy Minister (including Old Age Pensions, previously under the Department of Finance); Canada's Health and Welfare (monthly); *Health:* The Canadian Mother and Child; Daily Diet During Pregnancy; Healthful Living for Healthy Teeth; Your Baby's Teeth; Isn't She Lovely!; Victory over Disease; Healthful Eating; Care of the Feet; The Rat Menace; Housing; Home Treatment of Rural Water Supplies; Wells; Sewage Treatment for Isolated Houses and Small Institutions; How Well Fed Are You?; Air Conditioning and Heating in Relation to Health; Canada's Food Rules; Nutrition Demonstration Clinics; Don't Be a Sucker; Nitrous Fume Poisoning; Benzol Poisoning; If You Eat; The Lunch Box Is On The March; Why Let It Burn?; Facts about V.D.; Kitchen Wall Chart and How to Use It; Camp Feeding; Score Sheet for Each Day's Meals; Menu Patterns Based on Canada's Food Rules; Let's Talk Food, Mother; Posters—Meal Patterns, Foods for Health, Buy Wisely, Canada's Food Rules, Winter Diet, Avoid Malaria; *Welfare:* Family Allowances—A Children's Charter; Better Health Through Skiing; Family Allowance Graphic Sheets—Ask Yourself These Questions; Family Allowances Can Help; It's Up to You; Save Food—Avoid Waste.

**National Research Council.**—A list of publications issued by the National Research Council is available for free distribution on request. At the end of December, 1945, the number on the list was 1,286, including: Annual Reports of the Council; Technical Reports Nos. 1-29; Bulletins Nos. 1-19; Mimeographed Reports not hitherto listed as Council publications; Papers reprinted from the *Canadian Journal of Research* which contains (i) Reports of experimental work carried on in the National Research Laboratories, (ii) Reports of work done elsewhere with financial assistance from the National Research Council. All of these reports have been arranged in chronological order of publication and numbered in sequence. This series of publications is preceded by the letters "N.R.C. No."

The *Canadian Journal of Research* has not been included in the "N.R.C. No." series. Established as a medium for the publication in Canada of the results of original scientific research carried on in the Dominion, the *Canadian Journal of Research* is now published in six sections: A—Physical Sciences; B—Chemical Sciences; C—Botanical Sciences; D—Zoological Sciences; E—Medical Sciences; F—Technology. The Journal is to be found in the leading scientific libraries of the world. From its inception in May, 1929, to the end of Volume 12 in June, 1935, the Journal was issued in a single volume each month. *Copies of these 12 volumes unbound are available at \$1.50 each. An index of volumes 1-12 is available at \$1.* From July, 1935, to December, 1943, the Journal was published in four sections, each section being pagged separately. Sections A and B were bound in one cover each month, and Sections C and D were likewise bound together. The issues from July to December, 1935, were included in Volume 13, *Price \$2*. Volume 14 contains the Journals issued in 1936 and one volume has been published each year since then. In January, 1944, two new sections were added, namely, Section E—Medical Sciences and Section F—Technology. Issue of the Journal was made bi-monthly, three sections appearing in each alternate month. Each of the six sections now appears under its own cover. *Single numbers of the Journal are priced at 50 cents each; the yearly subscription rates are: one section \$2; two sections \$3; three sections \$4; four sections \$5; any five or all six sections \$6.*

**National Revenue.**—Annual Report, containing statements relative to imports, exports, excise and income.

**Post Office.**—Annual Report of the Postmaster General. Official Postal Guide. Regulations as to Rural Mail Delivery. Booklet of Postal Information.

**Public Archives.**—*Annual Reports* <sup>1</sup>—1914-15 (60 cents); 1921 (30 cents); 1923 (55 cents); 1926 (10 cents); 1928 (25 cents); 1929 (50 cents); 1930 (50 cents); 1931 (\$1); 1932 (\$1); 1933 (\$1); 1934 (10 cents); 1935 (\$1); 1936 (\$1); 1937 (\$1); 1938 (\$1); 1939 (50 cents); 1940 (50 cents); 1941 (50 cents); 1942 (50 cents); 1943 (50 cents); 1944 (\$1); 1945 (\$1).

*Numbered Publications.*—No. 9, Early Canadian Northwest Legislation—Oliver (2 Vols.) (1914-15), \$2; No. 12, Reports on the Laws of Quebec, 1767-70—Kennedy and Lanctot (1931), \$1; No. 13, Vol. I, Catalogue of Pamphlets,<sup>2</sup> 1493-1877—Casey (1931), \$1; Vol. II, Catalogue of Pamphlets,<sup>2</sup> 1878-1931—Casey (1932), \$1.

*Special Publications.*—(h) Documents—Constitutional History of Canada, 1759-91—Shortt and Doughty, 2 ed. (2 Vols.) (1918), \$2; (i) Catalogue of Pictures, etc.,<sup>3</sup> Part I, Sect. 1—Kenney (1925), \$2-50; (j) Documents—Canadian Currency, Exchange, etc., during the French Period<sup>4</sup>—Shortt (2 Vols.) (1925-26), \$3; (l) The Kelsey Papers<sup>5</sup> (Hudson Bay Co. Journals, 1683-1722)—Doughty and Martin (1929), \$2; (m) Documents—Currency in Nova Scotia,<sup>6</sup> 1675-1758—Shortt, Johnston, Lanctot (1933), \$2; (n) Documents—Constitutional History of Canada, 1819-28—Doughty and Story (1935), \$2; (o) The Elgin-Grey Papers,<sup>7</sup> 1846-52—Doughty (4 Vols.) (1937), \$5; (p) The Oakes Collection, New Documents by Lahontan—Lanctot (1940), 50 cents.

**Public Works.**—Annual Report.

**Reconstruction.**—Reconstruction, Research and Development—Questions and Answers for Manufacturers; Location and Effects of Wartime Industrial Expansion in Canada, 1939-44; Inter-Community Travel Survey prepared by Air Development Board, Price \$10; Labour and the Department of Reconstruction; Reconstruction; Employment and Income—with special reference to the initial period of reconstruction.

*Former Reports of the Department of Munitions and Supply Still Available.*—The Industrial Front, English and French; (Vol. III, Jan. 1, 1943; Vol. IV, a Supplement to Vol. III, July, 1943; Vol. V, Jan. 1, 1944); Manual of Procedure on Termination of Contracts, 1945; An Office consultation as of Jan. 1, 1945, of Orders in Council relating to, and Orders made by the Wartime Industries Control Board controls.

**Secretary of State.**—Annual Report, Price 10 cents. The Arms of Canada, Price 50 cents. The Canadian Patent Office Record, Annual subscription \$10, single numbers 10 cents. Annual Report of the Commissioner of Patents, Price 10 cents.

**Trade and Commerce.**—

*NOTE.*—Requests for the following publications should be addressed to the King's Printer, Ottawa. Publications of the Foreign Trade Service are compiled with a view to furnishing Canadian exporters with information respecting the possibilities for the sale of Canadian goods abroad, and providing Canadian importers with information on the possibilities of securing goods and materials from overseas sources of supply. These publications are not intended for general distribution. The publications available include leaflets giving Invoice Requirements, and a series of Points for Exporters, both covering countries included in the territories assigned to Trade Commissioners, and a pamphlet on Assistance that can be Given by Trade Commissioners to Exporters and Importers. From time to time special reports of interest to both Canadian exporters and importers are issued separately, which subscribers to the Commercial Intelligence Journal are entitled to receive free of charge. In all other cases, their distribution is controlled by the King's Printer, who fixes a price therefor.

Annual Report of the Department of Trade and Commerce, Price 25 cents; Annual Report of the Board of Grain Commissioners for Canada, Price 25 cents; Annual Report of the Dominion Grain Research Laboratory, Price 10 cents; List of Licensed Elevators, etc., Price 50 cents.

*Foreign Trade Service.*—Commercial Intelligence Journal, published weekly in English and French, contains reports of Trade Commissioners and other commercial information, Annual subscription, Canada \$1, outside Canada, \$3-50.

*Dominion Bureau of Statistics.*—(For the publications of the Dominion Bureau of Statistics, see pp. 1149-1163)

<sup>1</sup> Contains texts, calendars, and catalogues of documents as well as reports on the administrative work of the Divisions. <sup>2</sup> Title page and introduction in English and French, same volume; titles of pamphlets as in original; index in English. <sup>3</sup> Title, preface, and introduction in English and French in same volume; notes in English; titles of pictures exact. <sup>4</sup> Complete volumes, including index in English and French in same volume. <sup>5</sup> Title and introduction in English and French in same volume; notes and index in English; texts of journals exactly as in original (English). <sup>6</sup> Title and foreword in English and French, otherwise in English. <sup>7</sup> Title and introduction in English and French, otherwise in English.

*Canadian Government Travel Bureau.*—How to Enter Canada. Victory Vacation Folder. Sport Fishing in Canada. Canada's Game Fields. Canoeing in Canada. Map showing main automobile roads between Canada and United States. Trans-Canada Automobile Tour.

Sloan relating to the Workmen's Compensation Board, 1942; 245 pp. Report of the Commission of Inquiry into Educational Finance by Maxwell A. Cameron, 1945; 108 pp. Report of the Commissioner the Hon. Gordon McG. Sloan, Chief Justice of British Columbia relating to the forest resources of British Columbia, 1945; 195 pp. Report of the Hon. Mr. Justice A. M. Harper, Commissioner appointed by an Order of the Lieutenant-Governor in Council, dated June 1, 1945, relating to the "Chiropody Act". 1946; 23 pp.

# CHAPTER XXXIII.—THE ANNUAL REGISTER

## CONSPECTUS

	PAGE		PAGE
SECTION 1. PRINCIPAL EVENTS OF THE YEAR.....	1187	<i>Gazette</i> —OFFICIAL APPOINTMENTS, COMMISSIONS, ETC.....	1190
SECTION 2. EXTRACTS FROM THE <i>Canada</i>		SECTION 3. DOMINION LEGISLATION, 1945.	1195

### Section 1.—Principal Events of the Year\*

**The Governor General.**—Canada officially bade farewell to the retiring Governor General of Canada, the Earl of Athlone, and Princess Alice on Mar. 17, 1946.

On Apr. 12, 1946, Field Marshal the Right Honourable Viscount Alexander of Tunis, G.C.B., G.C.M.G., C.S.I., D.S.O., M.C., A.D.C., and Viscountess Alexander were welcomed on their arrival at Ottawa. Viscount Alexander was administered the oath of office as Governor General of Canada in the Senate Chamber.

**The Prime Minister.**—On June 9, 1946, the Right Honourable W. L. Mackenzie King, according to the official record, attained the distinction of having been Prime Minister of Canada over a longer period of time than any other Canadian leader in history, having exceeded the previous record of the Right Honourable Sir John A. Macdonald, the first Prime Minister of the Dominion. British and Dominion statesmen paid tribute to Prime Minister King as he began his twentieth year of office as Canadian Prime Minister.

**His Majesty's Honours Lists.**—In the King's New Year's Honours List of Jan. 1, 1946, Hon. J. L. Ilsley, Minister of Finance and Hon. Louis St. Laurent, Minister of Justice, were made members of the Imperial Privy Council. Hon. C. D. Howe, Minister of Reconstruction and Supply, was similarly honoured in His Majesty's Birthday Honours List of June 12, 1946: and the order of the Companion of Honour was conferred on Gen. the Hon. A. G. L. McNaughton, C.B., C.M.G., D.S.O.

The Dominion Day Honours List was devoted entirely to recognition of the varied and faithful contribution of Canadians to civilian and semi-civilian phases of the war effort. It was the most comprehensive list ever published, consisting of nearly 1,200 names. The size of this list was due mainly to the fact that awards of King's honours to Canadian civilians had been suspended from Jan. 1, 1944, to the end of the War. The list included: C.M.G., 40; C.V.O., 2; C.B.E., 121; O.B.E., 428; I.S.O., 23; M.B.E., 524; Polar Medal, 8; Bar to Polar Medal, 3.

Military lists of King's honours have been published regularly throughout the war years and have been summarized in the Introductions to the wartime issues of the Year Book, along with decorations awarded to the Services.

**Inter-Empire and International Conferences.**—The first General Assembly of the United Nations was held at London, Jan. 10 to Feb. 15, 1946, with representatives from 51 nations. Hon. Louis St. Laurent, Minister of Justice, was the chief Canadian delegate.

\* To the end of August, 1946.

The Dominion-Provincial Conference met at Ottawa, Jan. 28 to Feb. 2, 1946, and discussed in general terms the proposals and counter-proposals made by the various Governments. The Conference resumed its private sittings on Apr. 25, 1946; the sittings were open from Apr. 29. The meetings adjourned on May 3, 1946, the Dominion and Provincial Governments not having reached agreement in a reallocation of taxing powers, for which purpose the Conference was convened.

Representatives from 35 member countries met on Wilmington Island, near Savannah, Ga., U.S.A., Mar. 8 to Mar. 18, 1946, at the International Monetary Conference. Louis Rasminsky was Canada's representative.

Hon. L. B. Pearson, Canadian Ambassador to the United States, was member of the Council for Canada at the fourth meeting of the United Nations Relief and Rehabilitation Administration held at Atlantic City, Mar. 15 to Mar. 29, 1946.

The United Nations Security Council with representatives from 11 Allied Nations opened its first session at New York City on Mar. 25, 1946, and to date (Aug. 31, 1946) is still in conference.

The Prime Ministers of the British Dominions conferred at London, Apr. 23 to May 23, 1946. Canada was represented by Prime Minister W. L. Mackenzie King, who attended the sessions from May 20.

The first General Assembly of the Provisional International Civil Aviation Organization of 45 member countries met together at Montreal on May 21 to May 28, 1946. The following month a Regional Conference established Montreal as the permanent headquarters of the Organization.

The United Nations Atomic Energy Commission held its first meeting at New York City, beginning June 14, 1946, to study methods for world control of atomic energy in the interests of world peace. Canada's representative was Gen. the Hon. A. G. L. McNaughton, C.H., C.B., C.M.G., D.S.O. The Commission was still sitting at Aug. 31.

The Peace Conference, with 21 nations participating, opened at Paris, France, on July 29, 1946. Prime Minister W. L. Mackenzie King left Ottawa on July 18 to lead the Canadian delegation and on Aug. 2 put the case for Canada before the delegates of the other countries represented.

**Diplomatic Appointments.**—The personnel of Canadian diplomatic representatives abroad and of British and foreign envoys to Canada, as at Dec. 31, 1945, is given at pp. 86-91 of this volume. From that date to Aug. 31, 1946, the following representatives of Canada's Allies have presented their credentials to His Excellency the Governor General: The first Danish Minister to Canada, Hon. G. B. Holler, on Mar. 7, 1946; the Mexican Ambassador to Canada, Dr. Luis I. Rodriguez, on Apr. 23, 1946; the Swiss Minister, Dr. Victor Nef, on Apr. 25, 1946; the Brazilian Ambassador, Dr. Acyr do Nascimento Paes, on Apr. 26, 1946; and the Polish Minister, Dr. Alfred Fiderkiewicz, on May 31, 1946. Sir Alexander Clutterbuck, K.C.M.G., M.C., was appointed High Commissioner for the United Kingdom to Canada on Jan. 25, 1946, and arrived at Ottawa on May 29, 1946. The Czechoslovakian Minister to Canada, Mr. Frantisek Memec, was appointed July 27, and the Argentinian Ambassador to Canada, Juan Carlos Roderiquez, was appointed Aug. 7; these two representatives had not, to Aug. 31, presented their credentials. John D. Kearney, K.C., who was appointed Canadian Minister to Norway on Oct. 12, 1945, was also appointed on Jan. 15, 1946, to represent Canada in Denmark as Minister. Arthur Rive was appointed Canadian High Commissioner to New Zealand on May 16, 1946.

**Visiting Statesmen, etc.** - Prime Minister Clement R. Attlee of the United Kingdom arrived at Ottawa from Washington on Nov. 17, 1945, following five days of discussion with President H. S. Truman of the United States and Prime Minister W. L. Mackenzie King on a concrete program for sharing secrets of the atomic bomb. During his three-day visit, Prime Minister Attlee addressed a joint session of the Senate and the House of Commons in the House of Commons Chamber.

Gen. Dwight David Eisenhower, Chief of Staff of the United States Army and former Commander-in-Chief of the Allied Forces in Africa, Sicily, Italy and later on the Western Front, arrived at Ottawa on Jan. 9, 1946, for a three-day visit. Picturesque "Castle" Mountain in Banff National Park was renamed "Mount Eisenhower" as a tribute to his leadership of the armies of the United Nations.

Field Marshal Viscount Montgomery of Alamein, G.C.B., D.S.O., Chief of the Imperial General Staff, arrived in Ottawa on Aug. 28, 1946, for a three-day visit.

**The Royal Commission to Investigate Espionage in Canada.**—On Feb. 15, 1946, Prime Minister W. L. Mackenzie King announced that information of undoubted authenticity had reached the Canadian Government which established that there had been disclosures of secret and confidential information, directly or indirectly, to unauthorized persons, including some members of the staff of a Foreign Mission at Ottawa, to the prejudice of the safety and interests of Canada. In order to make possible the full investigation that the seriousness of the information demanded, the Government appointed a Royal Commission consisting of Mr. Justice R. Taschereau and Mr. Justice R. L. Kellock of the Supreme Court of Canada, to hear evidence and report thereon.

On Mar. 4, 1946, Prime Minister King made public the First Interim Report received from the Royal Commission. The evidence established that a network of under-cover agents had been organized by a foreign power for the purpose of obtaining secret and confidential information particularly from employees of Departments and agencies of the Dominion Government. Specific charges were laid against four persons, and it was stated that others were also implicated.

The Second Interim Report of the Royal Commission was issued on Mar. 14, 1946, and charges were laid against an additional number of persons.

On Mar. 18, 1946, Prime Minister King made a formal statement in the House of Commons on Canada's espionage inquiry. He stated that Soviet agents had used Canada as a base to secure information of a very great and grave concern to the United States and also to the United Kingdom.

Prime Minister King tabled in the House of Commons on Mar. 29, 1946, the Third Interim Report and on July 15 the Final Report. After each of these Reports several more persons were detained.

**Labour.**—As the basis of ending the prolonged dispute between the Ford Motor Company of Canada and the United Automobile Workers' Union (see "Chronology", Chapter II, p. 48) a decision of Mr. Justice I. C. Rand, arbitrator, was passed down on Jan. 29, 1946. The terms of the award denied union shop but allowed the principle of compulsory check-off of union dues from all workers whether union members or not. Penalties against individuals were provided for "wildcat" strikes and against the union in the case of strikes being called without a secret ballot of all employees.

On July 10, 1946, the Dominion Government took control of three Canadian basic steel plants in a move to avert a strike in the steel industry tentatively set for July 15. The Minister of Labour, Hon. Humphrey Mitchell, announced the

appointment of F. B. Kilbourn, Montreal, Que., as Dominion Controller of the three plants in which a strike was threatened—Steel Company of Canada, Hamilton, Ont., Algoma Steel Corporation, Sault Ste. Marie, Ont., and Dominion Steel and Coal Corporation, Sydney, N.S. In the face of this action, the United Steel Workers of America called the strike on July 15. On July 16, the Industrial Relations Committee of the House of Commons was authorized to investigate immediately all issues connected with the present industrial unrest in Canada. For this purpose evidence was taken from many witnesses including employers, representatives, union leaders and outstanding figures in many fields; these were called before the Committee to express their viewpoints.

**War Crimes Trials.**—The International war crimes trial held at Nuremburg, Germany, came to an end on Aug. 31, 1946, and the International Military Tribunal adjourned until Sept. 30, 1946, when it will render its verdict (see "Chronology", Chapter II, p. 48).

On Jan. 14, 1946, the death sentence imposed by a Canadian military court on Maj.-Gen. Kurt Meyer (see "Chronology", Chapter II, p. 48) was commuted to life imprisonment. Maj.-Gen. Meyer arrived in Canada on Apr. 30, 1946, to serve his sentence at Dorchester Penitentiary, N.B.

### Section 3.—Dominion Legislation, 1945

#### Legislation of the Sixth Session of the Nineteenth Parliament, Mar. 19, 1945 to Apr. 16, 1945

NOTE.—This classified list of Dominion Legislation has been compiled from the Statutes. Naturally, in summarizing material of this kind it is not always easy to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the Statutes themselves. Adequate references are given in this summary.

Chapter and Date of Assent	Synopsis
<b>Finance and Taxation—</b>	
1 Mar. 29	<i>The Appropriation Act, No. 1, 1945</i> grants payment, out of the Consolidated Revenue Fund, of \$5,654,976-27 for public service expenses based on further supplementary estimates for the fiscal year 1944-45.
2 Apr. 16	<i>The Appropriation Act, No. 2, 1945</i> grants payment, out of the Consolidated Revenue Fund, of \$148,845,000-59 for defraying the expenses of the public service during the fiscal year 1945-46, being five-twelfths of the items contained in the main estimates, together with additional interims of \$437,749-83, being one-twelfth of the amount set forth in Schedule A to the Act and \$862,958-33, being one-sixth of the amount set forth in Schedule B to the Act. Authority is also given for the raising, by the issue and sale of securities of Canada, of sums required for the redemption of certain loans or obligations.
3 Apr. 16	<i>The War Appropriation Act, No. 1, 1945</i> authorized the appropriation, out of the Consolidated Revenue Fund, of a sum not exceeding \$2,000,000,000 for defraying expenses incurred during the fiscal year 1945-46 in connection with the security, defence and welfare of Canada. Authority is also given for the raising, by the issue and sale of securities of Canada, of a sum not exceeding \$2,000,000,000 as may be required for the purposes of the Act.

#### Legislation of the First Session of the Twentieth Parliament, Sept. 6, 1945 to Dec. 18, 1945

Chapter and Date of Assent	Synopsis
<b>Finance and Taxation—</b>	
1 Sept. 12	<i>The Appropriation Act, No. 3, 1945</i> grants payment of \$29,769,000-11, out of the Consolidated Revenue Fund, for expenses of the public service for the fiscal year 1945-46 being one-twelfth of the amount of the main estimates.
2 Sept. 12	<i>The War Expenditure and Demobilization Appropriation Act, No. 1, 1945</i> authorizes the payment, out of the Consolidated Revenue Fund, of a sum not exceeding \$400,000,000 for expenses incurred during the fiscal year 1945-46 in connection with the security, defence and demobilization in Canada.
3 Oct. 12	<i>The Appropriation Act, No. 4, 1945</i> grants the payment, out of the Consolidated Revenue Fund, of \$29,769,000-11 for defraying the expenses of the public service during the fiscal year 1945-46, being one-twelfth of the amount of the main estimates.

**Legislation of the First Session of the Twentieth Parliament, Sept. 6,  
1945 to Dec. 18, 1945—continued**

Chapter and Date of Assent	Synopsis
<b>Finance and Taxation—concl.</b>	
5 Nov. 14	<i>The Appropriation Act, No. 5, 1945</i> authorizes the payment, out of the Consolidated Revenue Fund, of \$29,769,000·11 for public service expenses for the fiscal year 1945-46, being one-twelfth of the amount of the main estimates.
11 Dec. 18	<i>The Bretton Woods Agreements Act, 1945</i> approves the Agreements for an International Monetary Fund and an International Bank for Reconstruction and Development, and makes provision for the carrying into effect of such Agreements.
15 Dec. 18	<i>The Central Mortgage and Housing Corporation Act.</i> All authority formerly vested in the Minister of Finance under the Housing Act, with the exception of the payment of sums granted for slum clearance, is transferred to the Corporation established under this Act. The Central Mortgage Bank Act is repealed and the assets of that Bank transferred to the Corporation.
17 Dec. 18	<i>The Dominion-Alberta Supplementary Taxation Agreement Act, 1945</i> provides for an adjustment in the annual payments to be made to the Province of Alberta under the provisions of the Dominion-Provincial Taxation Agreement Act, 1942.
18 Dec. 18	<i>An Act to Amend the Dominion Succession Duty Act</i> (c. 14, 1940-41 and amendments) provides for a reduction of duty in cases where property is passed on more than once in five years.
19 Dec. 18	<i>An Act to Amend the Excess Profits Tax Act, 1940</i> (c. 32, 1940 and amendments) abolished the 20 p.c. refundable portion of the excess profits tax and reduced the rate of tax on excess profits from 100 p.c. to 60 p.c. The minimum standard profit under Act was increased from \$5,000 to \$15,000 as from Jan. 1, 1946, and sale proprietorships and partnerships were relieved of 15 p.c. tax on total profits.
23 Dec. 18	<i>An Act to Amend the Income War Tax Act</i> (c. 97 R.S.C. 1927 and amendments). The most important amendments under this Act include: the 4 p.c. reduction in individual income tax for 1945 and of 16 p.c. for 1946; adjustments in deductions on account of dependent children in order to avoid duplication because of the payment of family allowances; changes with respect to the payment of income tax on annuities, periodic payments under wills, and pensions; and abatement of income tax on distribution of surpluses of private companies.
30 Dec. 18	<i>An Act to Amend the Special War Revenue Act</i> (c. 179, R.S.C. 1927 and amendments). The most important amendment under this Act reduces the excise tax on furs from 25 p.c. to 10 p.c. and imposes an 8 p.c. sales tax on all furs and fur trimmed garments. Other amendments are made to Schedules I and III.
37 Dec. 18	<i>The War Expenditure and Demobilization Appropriation Act, No. 2, 1945</i> authorizes the appropriation, out of the Consolidated Revenue Fund, of a sum not exceeding \$1,365,000,000 (less \$400,000,000 voted under c. 2, 1945) for expenses incurred during the fiscal year 1945-46 in connection with the security, defence and demobilization in Canada. Authority is also given for the raising, by the issue and sale of securities of Canada, of a sum not exceeding \$1,365,000,000 as may be required for the purposes of the Act.
39 Dec. 18	<i>The Appropriation Act, No. 6, 1945</i> grants payment, out of the Consolidated Revenue Fund, of \$117,775,292·34 and \$21,931,048 (less the amounts already authorized under Appropriation Acts Nos. 2, 3, 4 and 5, 1945) for public service expenses for the fiscal year 1945-46. Authority is also given for raising, by the issue and sale of securities of Canada, a sum not exceeding \$200,000,000 for public works and general purposes.
<b>Agriculture—</b>	
4 Oct. 12	<i>The Food and Agriculture Organization of the United Nations Act, 1945</i> approves the Constitution of the Food and Agriculture Organization, a permanent international organization, and makes provision for the carrying into effect of the Agreement.
24 Dec. 18	<i>The Maple Products Industry Act, 1945</i> defines the regulations respecting the manufacturing, inspection and sale of maple products.
<b>Fisheries—</b>	
21 Dec. 18	<i>An Act to Amend the Fish Inspection Act</i> (c. 72, R.S.C. 1927 and amendments). The amendments under this Act concern mainly the seizure, detention and forfeiture of fish and container in event of an offence against the Act.

Legislation of the First Session of the Twentieth Parliament, Sept. 6,  
1945 to Dec. 18, 1945—continued

Chapter and Date of Assent	Synopsis
<b>Insurance and Trust Companies—</b>	
13 Dec. 18	<i>An Act to Amend the Canadian and British Insurance Companies Act, 1932</i> (c. 46, 1932 and amendments) adds to the list of assets that may be vested in trust by any British Insurance company certain fully secured debentures, bonds, etc.
20 Dec. 18	<i>An Act to Amend the Export Credits Insurance Act</i> (c. 39, 1944-45) increases the amount of loans and securities of other countries that may be held at any one time for the purpose of facilitating trade from \$100,000,000 to \$750,000,000.
22 Dec. 18	<i>An Act to Amend the Foreign Insurance Companies Act, 1932</i> (c. 47, 1932 and amendments) adds to the list of assets that may be vested in trust by any foreign insurance company, certain fully secured debentures, bonds, etc.
33 Dec. 18	<i>An Act to Amend the Trust Companies Act</i> (c. 29, R.S.C. 1927 and amendments) makes two minor amendments regarding the application of the Act.
<b>Justice—</b>	
28 Dec. 18	<i>An Act to Amend the Penitentiary Act, 1939</i> (c. 6, 1939 and amendments) authorizes the appointment of one or more members of the Penitentiary Commission, to consider the recommendations of a Royal Commission to investigate the penal system of Canada made Apr. 4, 1938. Other minor administrative amendments are made.
12 Dec. 18	<i>The Canada Prize Act, 1945.</i> By this Act, laws of the United Kingdom with respect to all goods taken as prize in the right of the United Kingdom are to be the law of Canada in respect to goods taken as prize in the right of Canada. The Exchequer Court of Canada on its Admiralty Side is given full jurisdiction in all matters of prize in Canada.
<b>National Health and Welfare—</b>	
7 Nov. 14	<i>An Act to Amend the Department of National Health and Welfare Act</i> (c. 22, 1944) makes a minor amendment to the original Act.
<b>Reconstruction and Supply—</b>	
16 Dec. 18	<i>The Department of Reconstruction and Supply Act, 1945</i> provides for the establishment of a Department of Reconstruction and Supply, which is authorized to take over the duties and functions formerly performed by the Department of Munitions and Supply and the Department of Reconstruction.
<b>Transportation—</b>	
6 Nov. 14	<i>An Act respecting the Appointment of Auditors for National Railways</i> provides for the appointment of independent auditors for 1945 to make a continuous audit of the accounts of the National Railways.
8 Nov. 14	<i>An Act to Amend the Canadian National Railways Capital Revision Act, 1937</i> (c. 22, 1937) makes a change in respect of the trustees named to the Securities Trust.
9 Dec. 18	<i>An Act to Amend the Aeronautics Act</i> (c. 3, R.S.C. 1927) gives the Air Transport Board certain jurisdiction to hear and determine inquiries under the Act and makes other administrative revisions to the original legislation.
14 Dec. 18	<i>The Canadian National Railways Financing and Guarantee Act, 1945</i> authorizes the payment of a sum not exceeding \$8,800,000, out of the Consolidated Revenue Fund, to meet certain capital expenditures made and capital indebtedness incurred by the Canadian National Railways System during 1945, and also authorizes the guarantee by His Majesty's Government in Canada of certain securities to be issued by the Canadian National Railway Company.
31 Dec. 18	<i>An Act to Amend the Trans-Canada Air Lines Act, 1937</i> (c. 43, 1937 and amendments) increases the authorized capital of the Corporation from \$5,000,000 to \$25,000,000 (250,000 shares at \$100 par value) and makes other administrative changes.
32 Dec. 18	<i>An Act to Amend the Transport Act, 1938</i> (c. 53, 1938 and amendments). The amendment applies only to transport of goods in bulk on waters on the Mackenzie River.

**Legislation of the First Session of the Twentieth Parliament, Sept. 6,  
1945 to Dec. 18, 1945—concluded**

Chapter and Date of Assent	Synopsis
<b>Veterans Affairs—</b>	
34 Dec. 18	<i>An Act to Amend the Veterans Land Act, 1942</i> (c. 33, 1942-43) increases the amounts that may be advanced to veterans under this Act and makes provisions for the settlement of veterans, including the payment of grants, on provincial or Dominion lands or Indian Reserves.
35 Dec. 18	<i>The Veterans Rehabilitation Act</i> provides rehabilitation allowances under certain conditions for veterans who are temporarily incapacitated from performing work, out of work, awaiting returns from a business or pursuing courses of training.
38 Dec. 18	<i>An Act to Amend the War Service Grants Act, 1944</i> (c. 51, 1944-45) makes certain changes in regard to war service gratuities paid to discharged members of the Forces, supplementary gratuities to ex-service personnel who had overseas service, and re-establishment credits given for specified purposes.
<b>Miscellaneous—</b>	
10 Dec. 18	<i>The Alberta Natural Resources Transfer (Amendment) Act, 1945.</i> An agreement made re differences that had arisen between the Dominion Government and the Government of Alberta in connection with certain water powers and an Agreement reached between the same Governments re the discontinuance of bird sanctuaries are confirmed by this Act.
25 Dec. 18	<i>The National Emergency Transitional Powers Act, 1945.</i> Because of the continued existence of the national emergency arising out of the War, this Act confers on the Governor in Council certain transitional powers regarding maintenance, demobilization and rehabilitation of the Armed Forces; readjustment of industry and commerce; control of prices, services and transportation; and relief measures in Empire or foreign countries. The War Measures Act is repealed.
26 Dec. 18	<i>An Act to Amend the National Housing Act, 1944</i> (c. 46, 1944) makes a number of administrative amendments to the original legislation.
27 Dec. 18	<i>An Act to authorize a certain Agreement between His Majesty the King and the Corporation of the City of Ottawa</i> is a new agreement between the City of Ottawa and the Dominion Government under which the Government is to make certain payments in lieu of taxes and specific civic services performed. All previous agreements are cancelled.
29 Dec. 18	<i>An Act to Amend the Senate and House of Commons Act</i> (c. 147, R.S.C. 1927 and amendments) provides for an additional expense allowances of \$2,000 each per annum to members of the Senate and the House of Commons; this allowance, in the case of Ministers of the Crown, Leaders of the Opposition and members of the Senate, is taxable.
36 Dec. 18	<i>An Act to Amend the War Charities Act, 1939</i> (c. 10, 1939 and amendments) brings under the provisions of the Act the collection of funds to be used for the erection, acquisition or maintenance of war memorials.

## APPENDIX I

### External Trade of Canada, 1945-46

Chapter XVI of this volume includes external trade figures for the calendar year 1945. However, at the time of going to press, it is possible to give monthly figures for the first half of 1946; these are shown in the following table together with monthly data for 1945 which are given for purposes of comparison.

It will be noted that domestic exports have shown a decided drop in each of the first six months of 1946 as compared with the same months of 1945. This is, of course, due to the fact that the War was still in progress in the latter period and external shipments from Canada consisted to a large extent of war materials. Imports over the same period have shown an increase in each month of from 4 to 20 p.c.

#### 1.—Trade of Canada (Excluding Gold), by Months, January, 1945-June, 1946

NOTE.—Figures for the calendar years 1940, 1941, 1942 and 1943 are given at p. 1059 of the 1943-44 Year Book and 1944 figures at p. 1163 of the 1945 Year Book.

Month	Imports		Domestic Exports		Total Trade	
	1945	1946	1945	1946	1945	1946
	\$	\$	\$	\$	\$	\$

## APPENDIX II

### Survey of Production, 1943-44

Since the inclusion of the figures in Chapter VII, it has been found desirable to deduct from the totals of primary production certain duplication between the agriculture and forestry totals. The computation of the gross and net agricultural production includes the value of forest products obtained from farm lots whether sold or retained for use on the farms; the output from forest operations as reported by the Forestry Branch also includes an estimate of the same production. This overlap will henceforth be eliminated from the figures of gross and net production as shown in Tables 1 and 2 below, for 1943 and 1944. The figures for previous years given at pp. 191-199 may be adjusted by the deduction of the duplications given in Table 3.

#### 1.—Gross and Net Values of Production in Canada, by Industries, 1943 and 1944

NOTE.—Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and process supplies consumed in the production process.

Industry	1943		1944		Per-centage Change in Net Value, 1944 from 1943	Per-centage of Net Value to Total Net Production 1944
	Gross	Net	Gross	Net		
	\$	\$	\$	\$		
Agriculture.....	1,524,379,000	1,245,843,000	1,873,825,000	1,533,206,000	+23.07	22.76
Forestry.....	810,154,089	462,815,227	887,973,532	507,357,605	+9.62	7.53
Fisheries.....	118,610,634	74,655,678	123,705,565	76,889,487	+2.99	1.14
Trapping.....	21,579,615	21,579,615	23,988,773	23,988,773	+11.16	0.36
Mining.....	974,414,921	475,529,364	897,407,212	454,022,468	-4.52	6.74
Electric Power.....	204,801,508	200,833,297	215,246,391	209,757,908	+4.44	3.11
Less: duplication in forest production <sup>1</sup> .....	64,000,614	64,000,614	78,294,000	61,367,833	-4.13	0.91
Totals, Primary Production.....	3,589,939,153	2,417,255,567	3,943,852,473	2,743,864,408	+13.51	40.73
Construction.....	572,426,551	293,538,167	449,838,059	249,037,017	-15.16	3.70
Custom and repair.....	213,622,000	144,952,000	243,424,000	185,174,000	+13.95	2.45
Manufactures.....	8,732,860,999	3,816,413,541	9,073,692,519	4,015,776,010	+5.22	59.61
Totals, Secondary Production.....	9,518,909,550	4,254,903,708	9,766,954,578	4,429,987,027	+4.11	65.76
Less duplication in manufactures <sup>2</sup> .....	1,148,896,816	410,701,516	1,160,974,424	437,045,069	+6.41	6.49
<b>Grand Totals.....</b>	<b>11,959,951,887</b>	<b>6,261,457,759</b>	<b>12,549,832,627</b>	<b>6,736,806,366</b>	<b>+7.59</b>	<b>100.00</b>

<sup>1</sup> Eliminates duplication between the agriculture and forestry totals; see text above. <sup>2</sup> Eliminates duplication under "Manufactures"; this item includes sawmills, pulp and paper mills, etc., which are also included under other headings above.
